## 3 说明

LMG210xR0xx 器件是一个 100V 半桥功率级系列，具有集成栅极驱动器和增强模式氮化镓 (GaN) FET。该器件由采用半桥配置的高频 GaN FET 驱动器构成，可驱动两个 100V GaN FET。

由于 GaN FET 的反向恢复为零，而且输入电容 ($C_{ISS}$) 和输出电容 ($C_{OSS}$) 都极小，所以 GaN FET 在功率转换方面优势极为显著。所有器件均安装在一个完全无键合线的封装平台上，最大限度减少封装寄生元件，便于在 PCB 板上安装使用。

无论 VCC 电压如何，TTL 逻辑兼容输入均可支持 3.3V 和 5V 逻辑电平。专有自举电压调节技术可将增强模式 GaN FET 的栅极电压调控至安全工作范围内。该器件配有用户友好型接口且更为出色，进一步提升了分立式 GaN FET 的优势。对于需要小尺寸、高频率、高效率运行的应用，该器件是理想之选。

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
