OPAx241、OPAx251 单电源微功耗运算放大器

1 特性

- OPAx241 系列经优化采用 5V 电源供电
- OPAx251 系列经优化采用 ±15V 电源供电
- 微功耗： I_Q = 25 µA
- 单电源供电
- 轨到轨输出（在 50mV 以内）
- 宽电源电压范围
  - 单电源：2.7V 至 36V
  - 双电源：±1.35V 至 ±18V
- 低失调电压：最大 ±250 µV
- 高共模抑制：124dB
- 高开环增益：128dB
- 单通道、双通道和四通道

2 应用

- 电池供电型仪表
- 便携式器件
- 医疗仪器
- 测试设备

3 说明

OPA241、OPA2241、OPA4241 (OPAx241) 和 OPA251、OPA2251、OPA4251 (OPAx251) 器件专为电池供电的便携式应用而设计。除了极低的功耗 (25 µA) 之外，这些放大器还具有低失调电压、轨到轨输出摆幅、高共模抑制和高开环增益。

OPAx241 系列由低电源电压供电，而 OPAx251 系列由高电源电压供电。这两个系列均可采用单电源（2.7V 至 36V）或双电源（±1.35V 至 ±18V）。输入共模电压范围比负电源电压低 200mV，因此是单电源应用的理想选择。

OPAx241 和 OPAx251 具有单位增益稳定特性，可驱动大容性负载。特殊的设计注意事项可确保这些产品易于使用。在放大器的摆幅接近额定限值时，仍可保持高性能。由于初始失调电压非常低（最高 ±250 µV），因此通常无需用户调整。但是，仍然为特殊应用提供了外部修整引脚（仅限单通道版本）。

OPAx241 和 OPAx251 的额定温度范围为 −40°C 至 +85°C，工作温度范围为 −55°C 至 +125°C。

6 Application and Implementation

备注

以下应用部分中的信息不属于 TI 器件规格的范围，TI 不担保其准确性和完整性。TI 的客 户应负责确定器件是否适用于其应用。客户应验证并测试其设计，以确保系统功能。

6.1 Applications Information

The OPAx241 and OPAx251 series are unity-gain stable and designed for a wide range of general-purpose applications. Bypass power-supply pins with 0.01 µ F ceramic capacitors.

6.1.1 Operating Voltage

The OPAx241 series is laser-trimmed for low offset voltage and drift at a low supply voltage (V_S = 5V). The OPAx251 series is trimmed for ±15V operation. Both series operate over the full voltage range (2.7V to 36V or ±1.35V to ±18V) with some compromises in offset voltage and drift performance. However, all other parameters have similar performance. Key parameters are production tested over the specified temperature range of −40°C to +85°C. Most behavior remains unchanged throughout the full operating voltage range. The typical characteristics curves show parameters that vary significantly with operating voltage or temperature.

6.1.2 Offset Voltage Trim

As previously mentioned, the OPAx241 series offset voltage is laser-trimmed at 5V. The OPAx251 series is trimmed at ±15V. The initial offset is so low that user adjustment is usually not required. However, the OPA241 and OPA251 (single op-amp versions) provide offset voltage trim connections on pins 1 and 5. 图 6-1shows how the offset voltage can be adjusted by connecting a potentiometer. Only use this adjustment to null the offset of the op amp, not to adjust system offset or offset produced by the signal source. Nulling offset can degrade the offset drift behavior of the op amp. While predicting the exact change in drift is not possible, the effect is usually small.

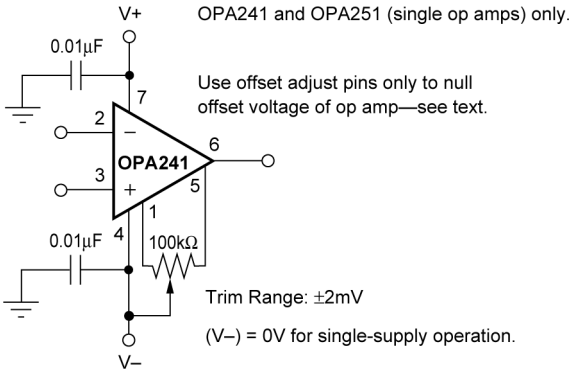

图 6-1. OPA241 and OPA251 Offset Voltage Trim Circuit

6.1.3 Capacitive Load and Stability

The OPAx241 series and OPAx251 series can drive a wide range of capacitive loads. However, all op amps under certain conditions can be unstable. Op amp configuration, gain, and load value are just a few of the factors to consider when determining stability.

图 6-2 and 图 6-3 show the regions where the OPAx241 series and OPAx251 series have the potential for instability. As shown, the unity gain configuration with low supplies is the most susceptible to the effects of capacitive load. With V_S = 5V, G = 1, and I_{OUT} = 0, operation remains stable with load capacitance up to approximately 200pF. Increasing a combination of supply voltage, output current, and gain significantly improves capacitive load drive. For example, increasing the supplies to ±15V and gain to 10 drives approximately 2700pF.

图 6-4 shows one method to improve capacitive load drive in the unity gain configuration by inserting a resistor inside the feedback loop. This reduces ringing with large capacitive loads while maintaining dc accuracy. For example, with V_S = ±1.35V and R_S = 5kΩ, the OPAx241 series and OPAx251 series perform well with capacitive loads in excess of 1000pF. Without the series resistor, the capacitive load drive is typically 200pF for these conditions. However, this method results in a slight reduction of output voltage swing.

7.4 静电放电警告

静电放电 (ESD) 会损坏这个集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理和安装程序，可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级，大至整个器件故障。精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

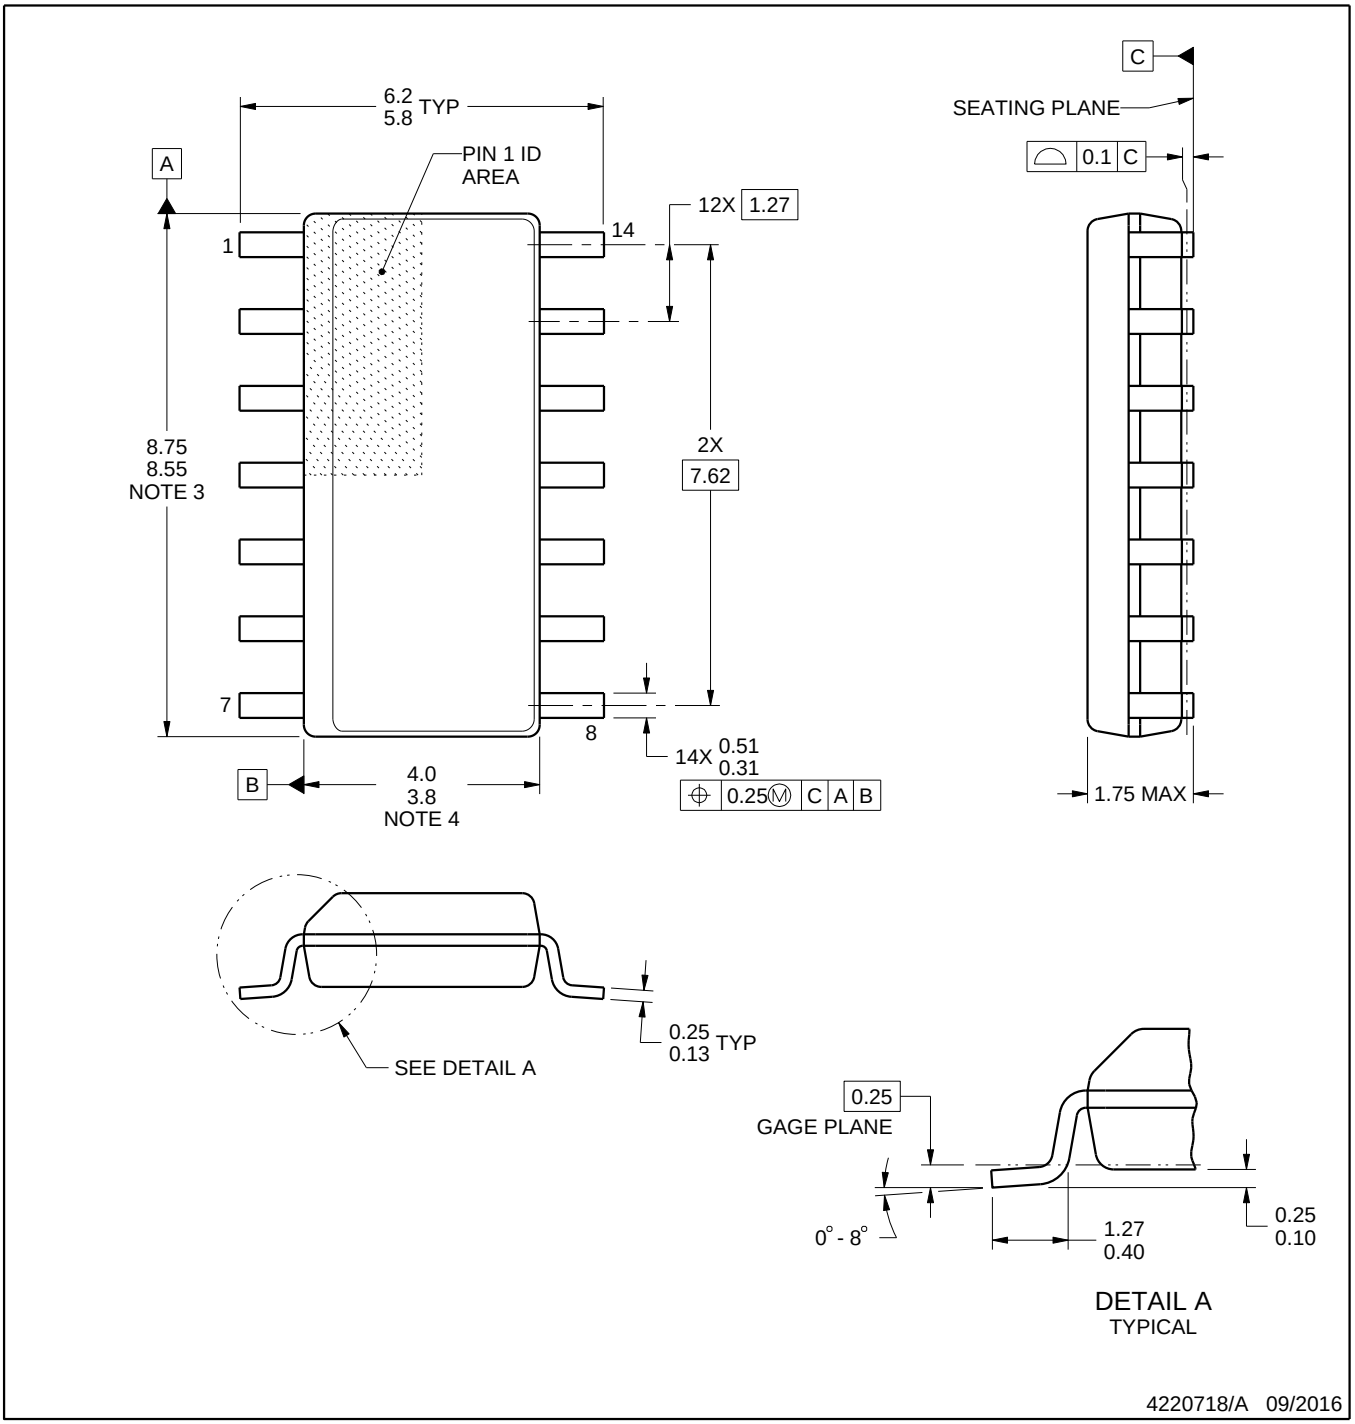
PACKAGE OUTLINE

D0014A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT



NOTES:

1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.43 mm, per side.
5. Reference JEDEC registration MS-012, variation AB.
