3 说明

这款 4 位同相总线收发器使用两个独立的可配置电源轨。A 端口旨在跟踪 V_{CCA} ， V_{CCA} 电源电压为 1.2V 至 3.6V。B 端口旨在用于跟踪 V_{CCB} ， V_{CCB} 电源电压为 1.2V 至 3.6V。SN74AVC4T245 经过优化，可在 V_{CCA}/V_{CCB} 设置为 1.4V 至 3.6V 的范围内正常运行。该器件可在 V_{CCA}/V_{CCB} 低至 1.2V 的情况下正常运行，因此可在 1.2V、1.5V、1.8V、2.5V 和 3.3V 电压节点之间进行通用的低电压双向转换。

SN74AVC4T245 器件旨在实现两条数据总线间的异步通信。方向控制 (DIR) 输入和输出使能 (\overline{OE}) 输入的逻辑电平激活 B 端口输出或者 A 端口输出，或者将两个输出端口都置于高阻抗模式。当 B 端口输出被激活时，此器件将数据从 A 总线发送到 B 总线，而当 A 端口输出被激活时，此器件将数据从 B 总线发送到 A 总线。A 端口和 B 端口上的输入电路一直处于激活状态并且必须施加一个逻辑高或低电平，从而防止过大的 I_{CC} 和 I_{CCZ} 。

SN74AVC4T245 器件旨在使 V_{CCA} 为控制引脚 (1DIR、2DIR、1OE 和 2OE) 供电。

该器件专用于使用 I_{off} 的局部断电应用。 I_{off} 电路可禁用输出，以防在器件断电时电流回流对器件造成损坏。

V_{CC} 隔离特性可确保任一 V_{CC} 输入接地时，两个端口都处于高阻抗状态。

要在上电或断电期间将器件置于高阻抗状态，应通过一个上拉电阻器将 \overline{OE} 连接至 V_{CC} ；该电阻器的最小值由驱动器的电流灌入能力决定。

7 Detailed Description

7.1 Overview

The SN74AVC4T245 is a 4-bit, dual-supply noninverting bidirectional voltage level translation device. V_{CCA} supports the Ax pins and control pins (1DIR, 2DIR, 1 \overline{OE} , and 2 \overline{OE}), and V_{CCB} supports the Bx pins. The A port can accept I/O voltages ranging from 1.2V to 3.6V, while the B port can accept I/O voltages from 1.2V to 3.6V. A high on DIR allows data transmission from Ax to Bx and a low on DIR allows data transmission from Bx to Ax when \overline{OE} is set to low. When \overline{OE} is set to high, both Ax and Bx pins are in the high-impedance state.

7.2 Functional Block Diagram

图 7-1. Logic Diagram (Positive Logic) for 1/2 of SN74AVC4T245

7.3 Feature Description

7.3.1 Fully Configurable Dual-Rail Design

The fully configurable dual-rail design allows each port to operate over the full 1.2V to 3.6V power-supply range. Both V_{CCA} and V_{CCB} can be supplied at any voltage between 1.2V and 3.6V; thus, making the device an excellent choice for translating between any of the low voltage nodes (1.2V, 1.8V, 2.5V, and 3.3V).

7.3.2 Supports High Speed Translation

The SN74AVC4T245 device can support high data rate applications. The translated signal data rate can be up to 380Mbps when the signal is translated from 1.8V to 3.3V.

7.3.3 I_{off} Supports Partial-Power-Down Mode Operation

I_{off} will prevent backflow current by disabling I/O output circuits when the device is in partial-power-down mode.

8 Application and Implementation

备注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The SN74AVC4T245 device can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another. The SN74AVC4T245 device is an excellent choice for applications where a push-pull driver is connected to the data I/Os. The maximum data rate can be up to 380Mbps when device translates a signal from 1.8V to 3.3V.

8.2 Typical Application

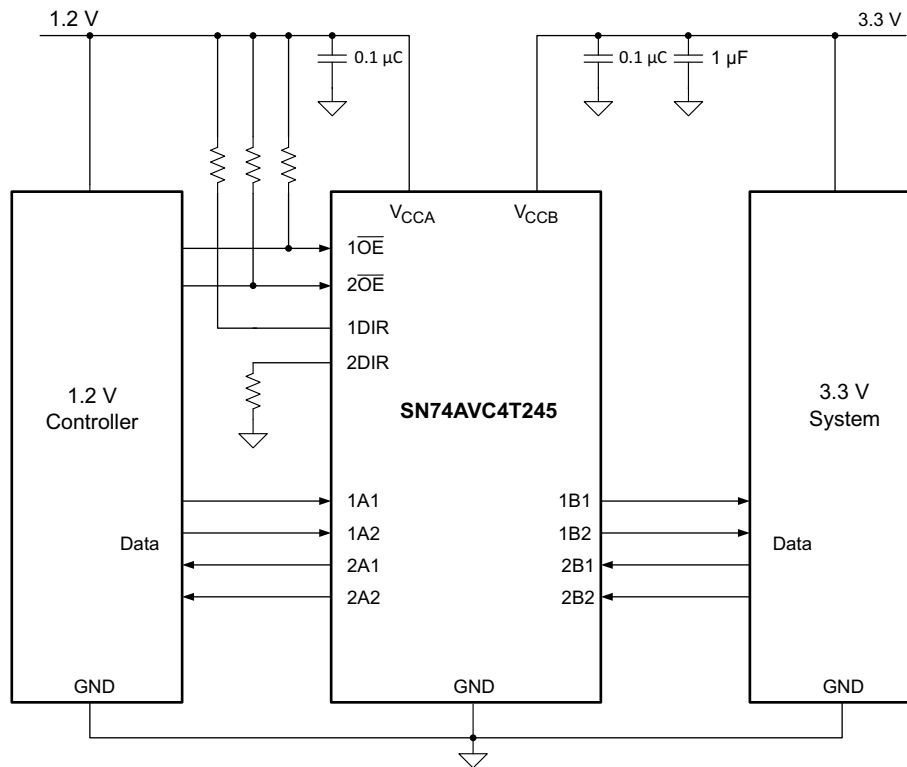

图 8-1. Typical Application Diagram

8.2.1 Design Requirements

For the design example shown in 节 8.2 use the parameters listed in 表 8-1.

表 8-1. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
Input voltage range	1.2V to 3.6V
Output voltage range	1.2V to 3.6V

8.2.2 Detailed Design Procedure

To begin the design process, determine the following:

- Input voltage range
 - Use the supply voltage of the device that is driving the SN74AVC4T245 device to determine the input voltage range. For a valid logic high, the value must exceed the V_{IH} of the input port. For a valid logic low, the value must be less than the V_{IL} of the input port.
- Output voltage range
 - Use the supply voltage of the device that the SN74AVC4T245 device is driving to determine the output voltage range.

8.2.3 Application Curves

图 8-2. Translation Up (1.2V to 3.3V) at 2.5MHz

8.3 Power Supply Recommendations

The SN74AVC4T245 device uses two separate configurable power-supply rails, V_{CCA} and V_{CCB} . V_{CCA} accepts any supply voltage from 1.2V to 3.6V and V_{CCB} accepts any supply voltage from 1.2V to 3.6V. The A port and B port are designed to track V_{CCA} and V_{CCB} respectively allowing for low-voltage bidirectional translation between any of the 1.2V, 1.5V, 1.8V, 2.5V and 3.3V voltage nodes.

The output-enable (\overline{OE}) input circuit is designed so that V_{CCA} supplies \overline{OE} , and when the \overline{OE} input is high, all outputs are placed in the high-impedance state. To put the outputs in the high-impedance state during power up or power down, the \overline{OE} input pin must be tied to V_{CCA} through a pullup resistor and must not be enabled until V_{CCA} and V_{CCB} are fully ramped and stable. The current-sinking capability of the driver determines the minimum value of the pullup resistor to V_{CCA} .

8.4 Layout

8.4.1 Layout Guidelines

For device reliability, it is recommended to follow common printed-circuit board layout guidelines, such as follows:

- Bypass capacitors should be used on power supplies.
- Short trace lengths should be used to avoid excessive loading.
- Place pads on the signal paths for loading capacitors or pullup resistors to help adjust rise and fall times of signals, depending on the system requirements.

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.
