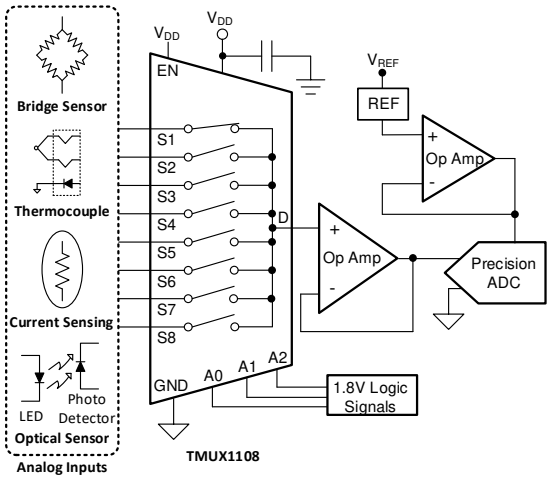
TMUX1108 5V/±2.5V、低漏电流、8:1 精密多路复用器

1 特性

- 宽电源电压范围：±2.5V，1.08V 至 5.5V
- 低漏电流：3pA
- 低电荷注入：1pC
- 低导通电阻：2.5Ω
- 工作温度范围：-40°C 至 +125°C
- 兼容 1.8V 逻辑电平
- 失效防护逻辑
- 轨到轨运行
- 双向信号路径
- 先断后合开关操作
- ESD 保护 HBM：2000V

2 应用

- 超声波扫描仪
- 患者监护和诊断
- 光纤网络
- 光学测试设备
- 远程无线电单元
- ATE 测试设备
- 工厂自动化和工业过程控制
- 可编程逻辑控制器 (PLC)
- 模拟输入模块
- 数字万用表
- 电池监控系统



应用示例

3 说明

TMUX1108 是精密互补金属氧化物半导体 (CMOS) 多路复用器 (MUX)。TMUX1108 提供单通道 8:1 配置。1.08V 至 5.5V 的宽工作电源电压范围使该器件非常适用于从医疗设备到工业系统的各种应用。该器件可在源极 (Sx) 和漏极 (D) 引脚上支持从 GND 到 V_{DD} 范围的双向模拟和数字信号。所有逻辑输入均具有兼容 1.8V 逻辑的阈值，当器件在有效电源电压范围内运行时，这些阈值可实现 TTL 和 CMOS 逻辑兼容性。失效防护逻辑电路允许先在控制引脚上施加电压，然后在电源引脚上施加电压，从而保护器件免受潜在的损害。

TMUX1108 是精密开关和多路复用器器件系列的一部分。此类器件具有非常低的导通和关断漏电流以及较低的电荷注入，因此可用于高精度测量应用。8nA 的低电源电流和小型封装选项使其可用于便携式应用。

封装信息

器件型号(1)	封装(2)	封装尺寸(3)
TMUX1108	PW（TSSOP，16）	5mm × 6.4mm
	RSV（QFN，16）	2.6mm × 1.8mm

(1) 请参阅器件比较
(2) 有关更多信息，请参阅节 11
(3) 封装尺寸（长 × 宽）为标称值，并包括引脚（如适用）。

PRODUCT	DESCRIPTION
TMUX1108	8:1, 1-Channel. single-ended multiplexer

5 Pin Configuration and Functions

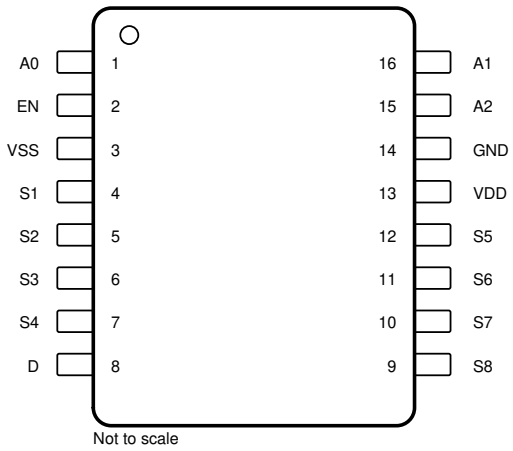

图 5-1. TMUX1108: PW Package, 16-Pin TSSOP (Top View)

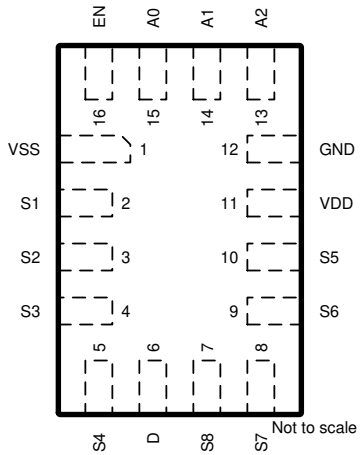

图 5-2. TMUX1108: RSV Package, 16-Pin QFN (Top View)

表 5-1. Pin Functions

PIN			TYPE(1)	DESCRIPTION
NAME	TSSOP	UQFN		
A0	1	15	I	Address line 0
EN	2	16	I	Active high logic input. When this pin is low, all switches are turned off. When this pin is high, the A[2:0] logic inputs determine which switch is turned on.
VSS	3	1	P	Negative power supply. This pin is the most negative power-supply potential. For reliable operation, connect a decoupling capacitor ranging from 0.1µF to 10µF between V_{SS} and GND. V_{SS} can be connected to ground for single supply applications.
S1	4	2	I/O	Source pin 1. Can be an input or output.
S2	5	3	I/O	Source pin 2. Can be an input or output.
S3	6	4	I/O	Source pin 3. Can be an input or output.
S4	7	5	I/O	Source pin 4. Can be an input or output.
D	8	6	I/O	Drain pin. Can be an input or output.
S8	9	7	I/O	Source pin 8. Can be an input or output.
S7	10	8	I/O	Source pin 7. Can be an input or output.
S6	11	9	I/O	Source pin 6. Can be an input or output.
S5	12	10	I/O	Source pin 5. Can be an input or output.
VDD	13	11	P	Positive power supply. This pin is the most positive power-supply potential. For reliable operation, connect a decoupling capacitor ranging from 0.1µF to 10µF between V_{DD} and GND.
GND	14	12	P	Ground (0V) reference
A2	15	13	I	Address line 2
A1	16	14	I	Address line 1

(1) I = input, O = output, I/O = input and output, P = power

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1) (2) (3)

		MIN	MAX	UNIT
V_{DD} – V_{SS}	Supply voltage	– 0.5	6	V
V_{DD}		– 0.5	6	V
V_{SS}		– 3.0	0.3	V
V_{SEL} or V_{EN}	Logic control input pin voltage (EN, A0, A1, A2)	– 0.5	6	V
I_{SEL} or I_{EN}	Logic control input pin current (EN, A0, A1, A2)	– 30	30	mA
V_S or V_D	Source or drain voltage (Sx, D)	– 0.5	V_{DD}+0.5	V
I_S or $I_{D\ (CONT)}$	Source or drain continuous current (Sx, D)	I_{DC} ± 10 %(4)	I_{DC} ± 10 %(4)	mA
I_S or $I_{D\ (PEAK)}$	Source and drain peak current: (1 ms period maximum, 10% duty cycle maximum) (Sx, SxA, SxB, D, DA, DB)	Ipeak ± 10 %(4)	I_{peak} ± 10 %(4)	mA
T_{stg}	Storage temperature	– 65	150	°C
P_{tot}	Total power dissipation(5) (6)		500	mW
T_J	Junction temperature		150	°C

(1) Stresses beyond those listed under *Absolute Maximum Rating* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Condition*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum.
(3) All voltages are with respect to ground, unless otherwise specified.
(4) Refer to Recommended Operating Conditions for I_{DC} and I_{Peak} ratings.
(5) For TSSOP package: P_{tot} derates linearly above TA=90°C by 8.41mW/°C
(6) For QFN package: P_{tot} derates linearly above TA=82°C by 7.43mW/°C

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins(1)	±2000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins(2)	±750	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
V_{DD}	Positive power supply voltage (single)		1.08		5.5	V
V_{SS}	Negative power supply voltage (dual)		-2.75		0	V
V_{DD} - V_{SS}	Supply rail voltage difference		1.08		5.5	V
V_S or V_D	Signal path input/output voltage (source or drain pin) (Sx, D)		V_{SS}		V_{DD}	V
V_{SEL} or V_{EN}	Address or enable pin voltage		0		5.5	V
T_A	Ambient temperature		– 40		125	°C
I_{DC}	Continuous current through switch	Tj = 25°C		150		mA
		Tj = 85°C		120		mA
		Tj = 125°C		60		mA
		Tj = 130°C		50		mA

6.3 Recommended Operating Conditions（续）

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
I_{peak}	Peak current through switch(1 ms period maximum, 10% duty cycle maximum)	Tj = 25°C		300		mA
		Tj = 85°C		300		mA
		Tj = 125°C		180		mA
		Tj = 130°C		160		mA

6.4 Thermal Information

THERMAL METRIC(1)		DEVICE PW (TSSOP) 16 PINS	DEVICE RSV (QFN) 16 PINS	UNIT
$R_{\theta JA}$	Junction-to-ambient thermal resistance	118.9	134.6	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	49.3	74.3	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	65.2	62.8	°C/W
Ψ_{JT}	Junction-to-top characterization parameter	7.6	4.3	°C/W
Ψ_{JB}	Junction-to-board characterization parameter	64.6	61.1	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	N/A	N/A	°C/W

(1) For more information about traditional and new thermal metrics, see the Semiconductor and IC Package Thermal Metrics application report.

6.5 Electrical Characteristics (V_{DD} = 5V ±10 %)

at T_A = 25°C, V_{DD} = 5V (unless otherwise noted)

PARAMETER		TEST CONDITIONS	TA	MIN	TYP	MAX	UNIT
ANALOG SWITCH							
R_{ON}	On-resistance	V_S = 0V to V_{DD} I_{SD} = 10mA	25°C		2.5	4	Ω
			– 40°C to +85°C			4.5	Ω
			– 40°C to +125°C			4.9	Ω
ΔR_{ON}	On-resistance matching between channels	V_S = 0V to V_{DD} I_{SD} = 10mA	25°C		0.13		Ω
			– 40°C to +85°C			0.4	Ω

7 Detailed Description

7.1 Overview

7.1.1 On-Resistance

The on-resistance of a device is the ohmic resistance between the source (Sx) and drain (D) pins of the device. The on-resistance varies with input voltage and supply voltage. The symbol R_{ON} is used to denote on-resistance. The measurement setup used to measure R_{ON} is shown in 图 7-1. Voltage (V) and current (I_{SD}) are measured using this setup, and R_{ON} is computed with $R_{ON} = V / I_{SD}$:

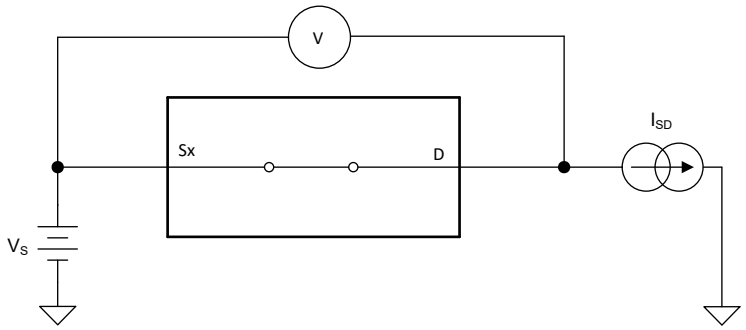

图 7-1. On-Resistance Measurement Setup

7.1.2 Off-Leakage Current

There are two types of leakage currents associated with a switch during the off state:

1. Source off-leakage current
2. Drain off-leakage current

Source leakage current is defined as the leakage current flowing into or out of the source pin when the switch is off. This current is denoted by the symbol $I_{S(OFF)}$.

Drain leakage current is defined as the leakage current flowing into or out of the drain pin when the switch is off. This current is denoted by the symbol $I_{D(OFF)}$.

The setup used to measure both off-leakage currents is shown in 图 7-2.

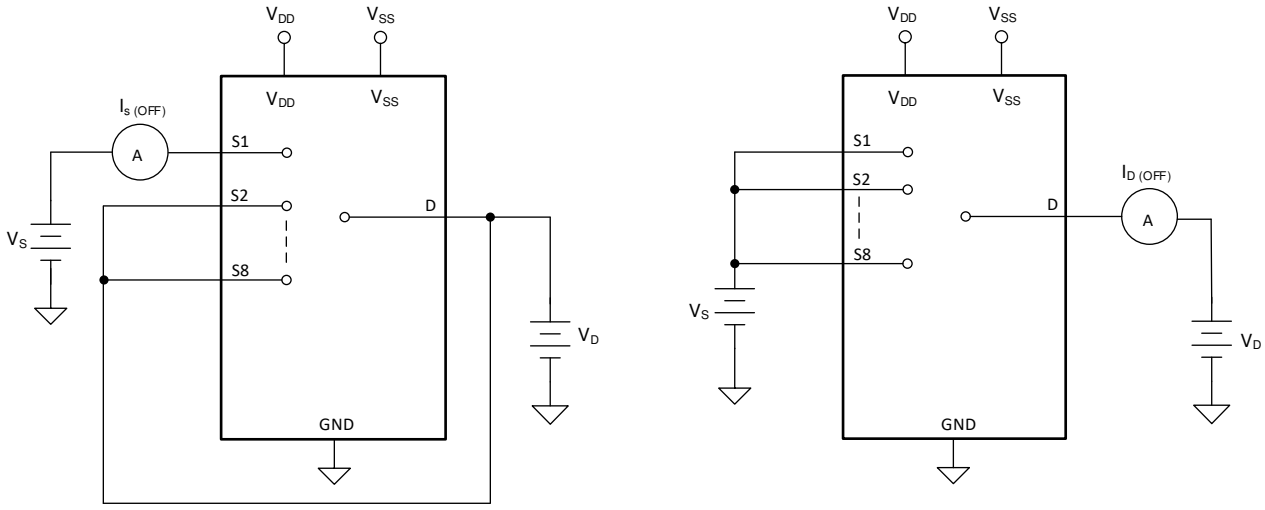

图 7-2. Off-Leakage Measurement Setup

7.1.3 On-Leakage Current

Source on-leakage current is defined as the leakage current flowing into or out of the source pin when the switch is on. This current is denoted by the symbol $I_{S(ON)}$.

Drain on-leakage current is defined as the leakage current flowing into or out of the drain pin when the switch is on. This current is denoted by the symbol $I_{D(ON)}$.

Either the source pin or drain pin is left floating during the measurement. 图 7-3 shows the circuit used for measuring the on-leakage current, denoted by $I_{S(ON)}$ or $I_{D(ON)}$.

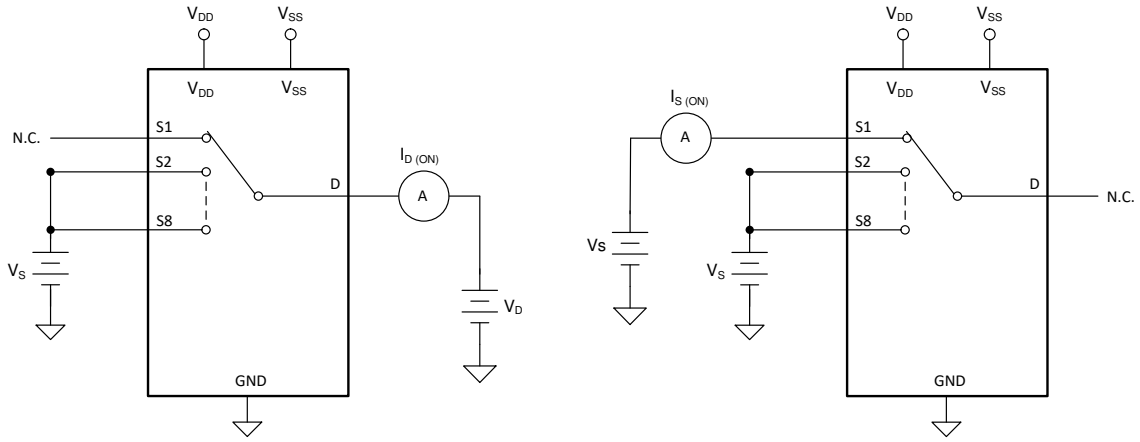

图 7-3. On-Leakage Measurement Setup

7.1.4 Transition Time

Transition time is defined as the time taken by the output of the device to rise or fall 10% after the address signal has risen or fallen past the logic threshold. The 10% transition measurement is utilized to provide the timing of the device, system level timing can then account for the time constant added from the load resistance and load capacitance. 图 7-4 shows the setup used to measure transition time, denoted by the symbol $t_{TRANSITION}$.

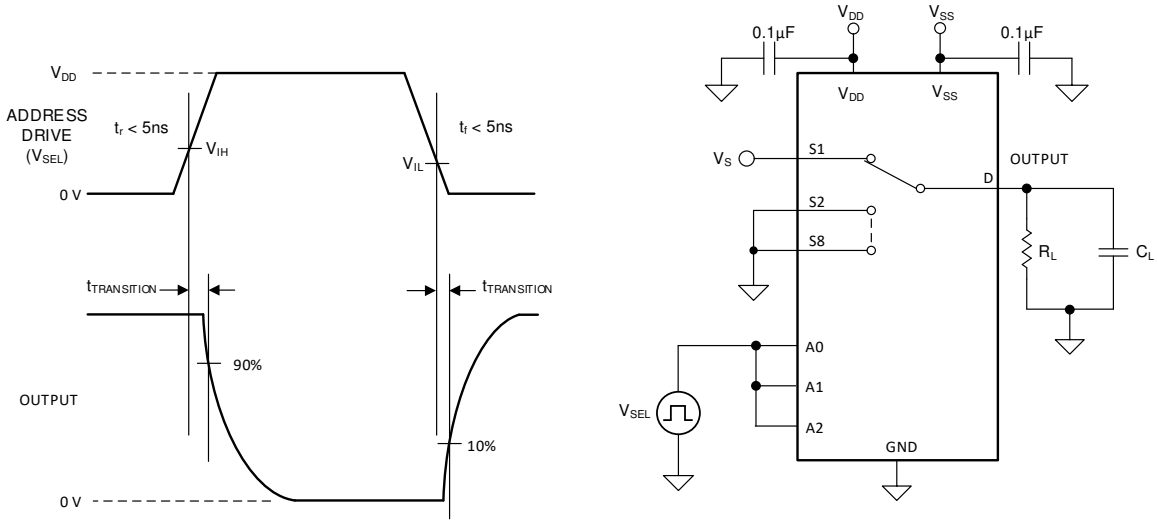

图 7-4. Transition-Time Measurement Setup

7.1.5 Break-Before-Make Delay

Break-before-make delay is a safety feature that prevents two inputs from connecting when the device is switching. The output first breaks from the on-state switch before making the connection with the next on-state switch. The time delay between the *break* and the *make* is known as break-before-make delay. 图 7-5 shows the setup used to measure break-before-make delay, denoted by the symbol $t_{OPEN(BBM)}$.

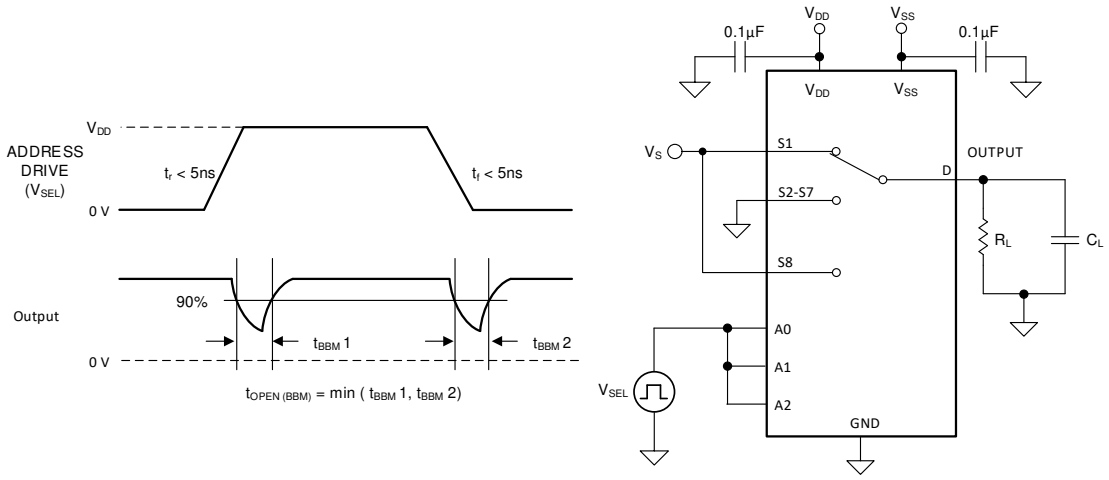

图 7-5. Break-Before-Make Delay Measurement Setup

7.1.6 Turn-On and Turn-Off Time

Turn-on time is defined as the time taken by the output of the device to rise to 10% after the enable has risen past the logic threshold. The 10% measurement is utilized to provide the timing of the device, system level timing can then account for the time constant added from the load resistance and load capacitance. 图 7-6 shows the setup used to measure turn-on time, denoted by the symbol $t_{ON(EN)}$.

Turn-off time is defined as the time taken by the output of the device to fall to 90% after the enable has fallen past the logic threshold. The 90% measurement is utilized to provide the timing of the device, system level timing can then account for the time constant added from the load resistance and load capacitance. 图 7-6 shows the setup used to measure turn-off time, denoted by the symbol $t_{OFF(EN)}$.

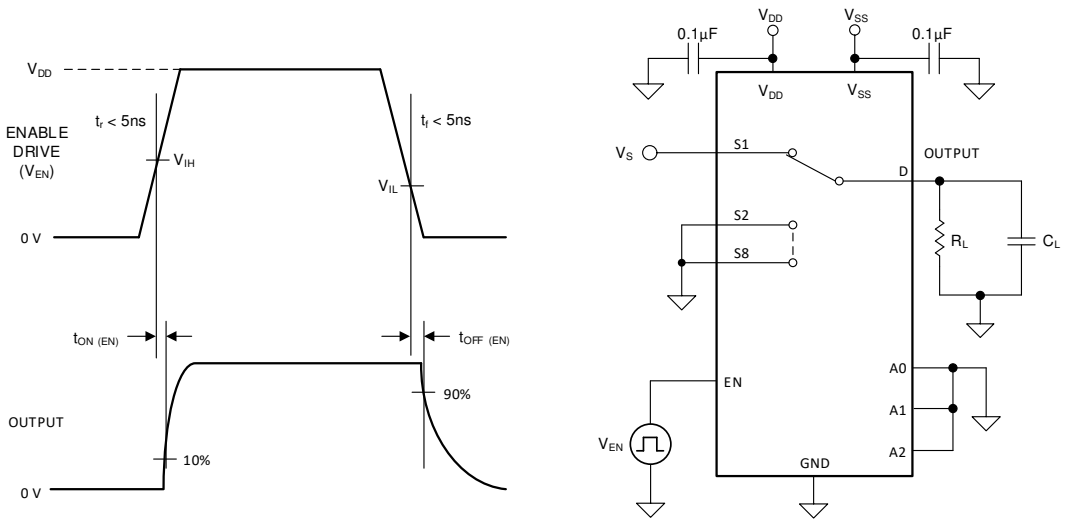

图 7-6. Turn-On and Turn-Off Time Measurement Setup

7.1.7 Charge Injection

The TMUX1108 has a transmission-gate topology. Any mismatch in capacitance between the NMOS and PMOS transistors results in a charge injected into the drain or source during the falling or rising edge of the gate signal. The amount of charge injected into the source or drain of the device is known as charge injection, and is denoted by the symbol Q_C. 图 7-7 shows the setup used to measure charge injection from source (Sx) to drain (D).

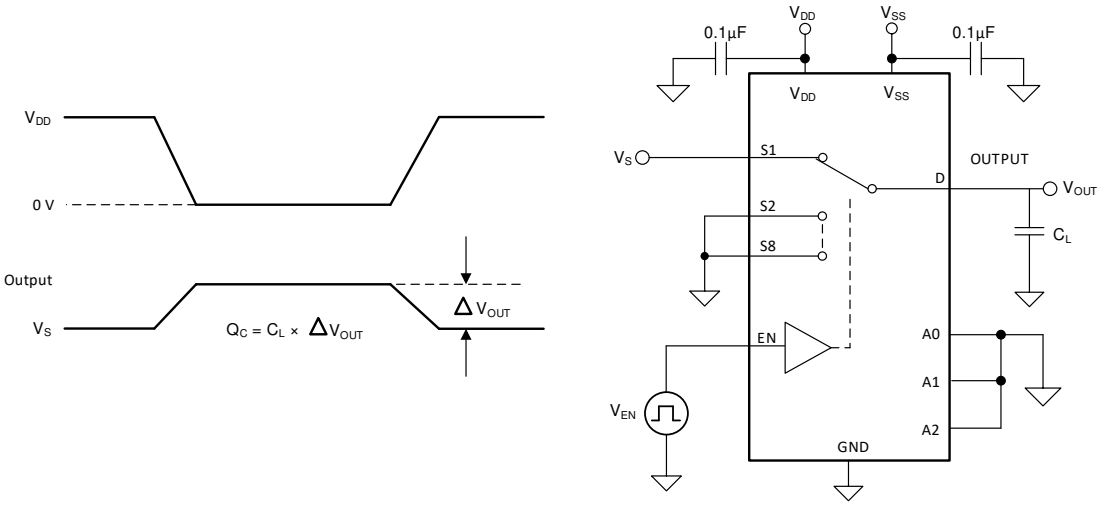

图 7-7. Charge-Injection Measurement Setup

7.1.8 Off Isolation

Off isolation is defined as the ratio of the signal at the drain pin (D) of the device when a signal is applied to the source pin (Sx) of an off-channel. 图 7-8 shows the setup used to measure off isolation. Use the off isolation equation to compute off isolation.

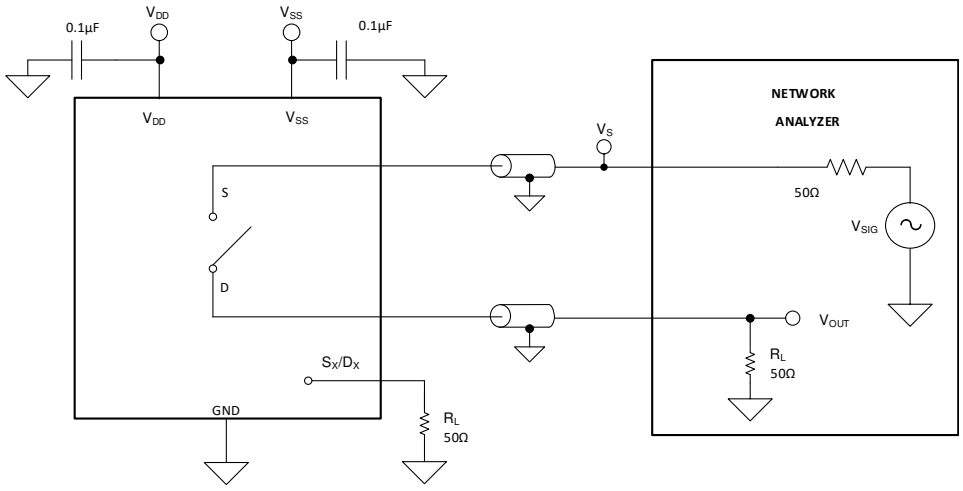

图 7-8. Off Isolation Measurement Setup

$$\text{Off Isolation} = 20 \cdot \text{Log}\left(\frac{V_{OUT}}{V_S}\right) \quad (1)$$

7.1.9 Crosstalk

Crosstalk is defined as the ratio of the signal at the drain pin (D) of a different channel, when a signal is applied at the source pin (Sx) of an on-channel. 图 7-9 shows the setup used to measure, and the equation used to compute crosstalk.

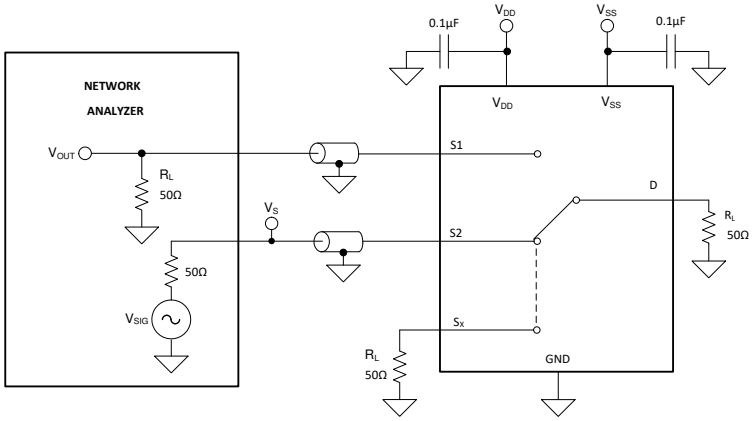

图 7-9. Crosstalk Measurement Setup

$$\text{Channel-to-Channel Crosstalk} = 20 \cdot \text{Log}\left(\frac{V_{OUT}}{V_S}\right) \quad (2)$$

7.1.10 Bandwidth

Bandwidth is defined as the range of frequencies that are attenuated by less than 3 dB when the input is applied to the source pin (Sx) of an on-channel, and the output is measured at the drain pin (D) of the device. 图 7-10 shows the setup used to measure bandwidth.

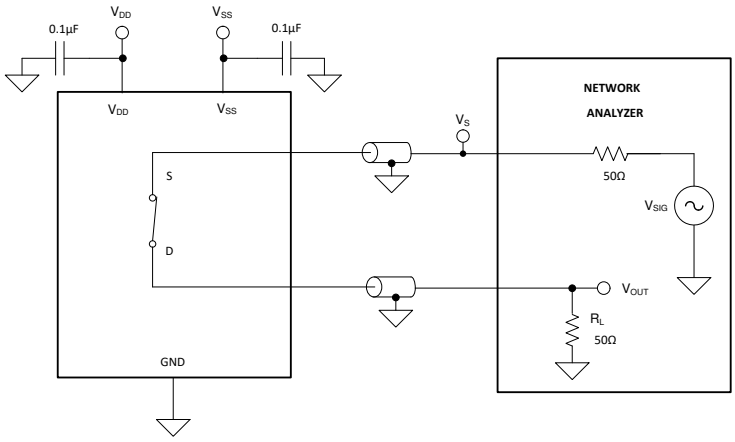

图 7-10. Bandwidth Measurement Setup

7.2 Functional Block Diagram

The TMUX1108 is an 8:1, single-ended (1-ch.), analog mux. Each channel is turned on or turned off based on the state of the address lines and enable pin.

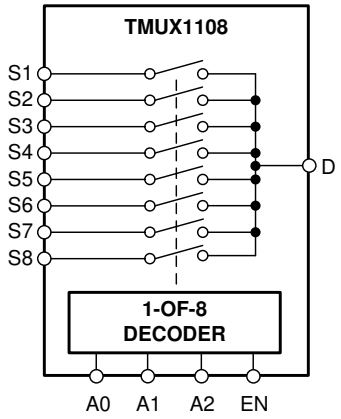

图 7-11. TMUX1108 Functional Block Diagram

7.3 Feature Description

7.3.1 Bidirectional Operation

The TMUX1108 conducts equally well from source (Sx) to drain (D) or from drain (D) to source (Sx). Each channel has very similar characteristics in both directions and supports both analog and digital signals.

7.3.2 Rail to Rail Operation

The valid signal path input/output voltage for TMUX1108 ranges from V_{SS} to V_{DD}.

7.3.3 1.8V Logic Compatible Inputs

The TMUX1108 has 1.8V logic compatible control for all logic control inputs. The logic input thresholds scale with supply but still provide 1.8V logic control when operating at 5.5V supply voltage. 1.8V logic level inputs allows the TMUX1108 to interface with processors that have lower logic I/O rails and eliminates the need for an external translator, which saves both space and BOM cost. For more information on 1.8V logic implementations refer to *Simplifying Design with 1.8V logic Muxes and Switches*.

7.3.4 Fail-Safe Logic

The TMUX1108 support Fail-Safe Logic on the control input pins (EN, A0, A1, A2) allowing for operation up to 5.5V, regardless of the state of the supply pin. This feature allows voltages on the control pins to be applied before the supply pin, protecting the device from potential damage. Fail-Safe Logic minimizes system complexity by removing the need for power supply sequencing on the logic control pins. For example, the Fail-Safe Logic feature allows the select pins of the TMUX1108 to be ramped to 5.5V while V_{DD} = 0V. Additionally, the feature enables operation of the TMUX1108 with V_{DD} = 1.2V while allowing the select pins to interface with a logic level of another device up to 5.5V.

7.3.5 Ultra-low Leakage Current

The TMUX1108 provides extremely low on-leakage and off-leakage currents. The TMUX1108 is capable of switching signals from high source-impedance inputs into a high input-impedance op amp with minimal offset error because of the ultra-low leakage currents. 图 7-12 shows typical leakage currents of the TMUX1108 versus temperature.

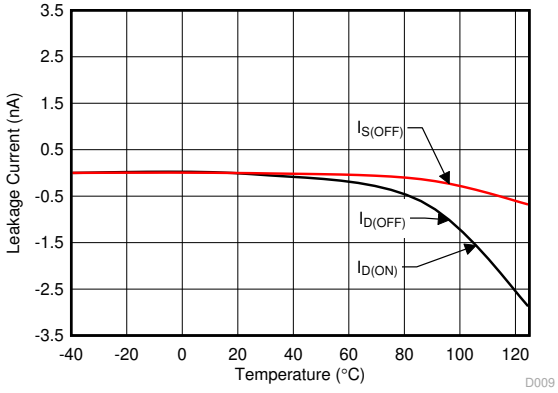

图 7-12. Leakage Current vs Temperature

7.3.6 Ultra-low Charge Injection

The TMUX1108 has a transmission gate topology, as shown in 图 7-13. Any mismatch in the stray capacitance associated with the NMOS and PMOS causes an output level change whenever the switch is opened or closed.

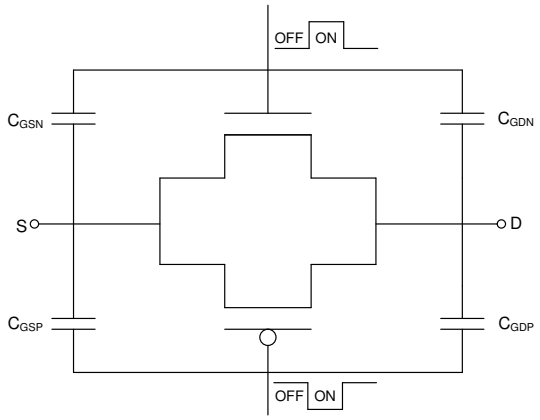

图 7-13. Transmission Gate Topology

The TMUX1108 has special charge-injection cancellation circuitry that reduces the source-to-drain charge injection to as low as 1pC at V_S = 1V as shown in 图 7-14.

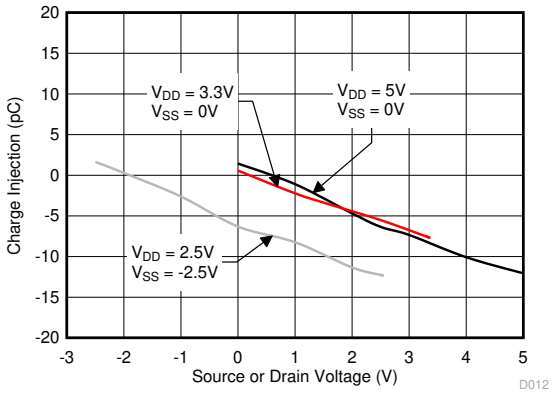

图 7-14. Charge Injection vs Source or Drain Voltage

7.4 Device Functional Modes

When the EN pin of the TMUX1108 is pulled high, one of the switches is closed based on the state of the address lines. When the EN pin is pulled low, all the switches are in an open state regardless of the state of the address lines.

7.4.1 Truth Tables

表 7-1 shows the truth table for the TMUX1108.

表 7-1. TMUX1108 Truth Table

8 Application and Implementation

备注

以下应用部分中的信息不属于 TI 元件规格，TI 不担保其准确性和完整性。TI 的客户负责确定元件是否适合其用途，以及验证和测试其设计实现以确认系统功能。

8.1 Application Information

The TMUX11xx family offers ultra-low input/output leakage currents and low charge injection. These devices operate up to 5.5V, and offer true rail-to-rail input and output. The TMUX1108 has a low on-capacitance which allows faster settling time when multiplexing inputs in the time domain. These features make the TMUX11xx a family of precision, robust, high-performance analog multiplexer for low-voltage applications.

8.2 Typical Application

图 8-1 shows a 16-bit, 8 input, multiplexed, data-acquisition system. This example is typical in industrial applications that require low distortion for precision measurements. The circuit uses the ADS8864, a 16-bit, 400-kSPS successive-approximation-resistor (SAR) analog-to-digital converter (ADC), along with a precision amplifier, and an 8 input mux.

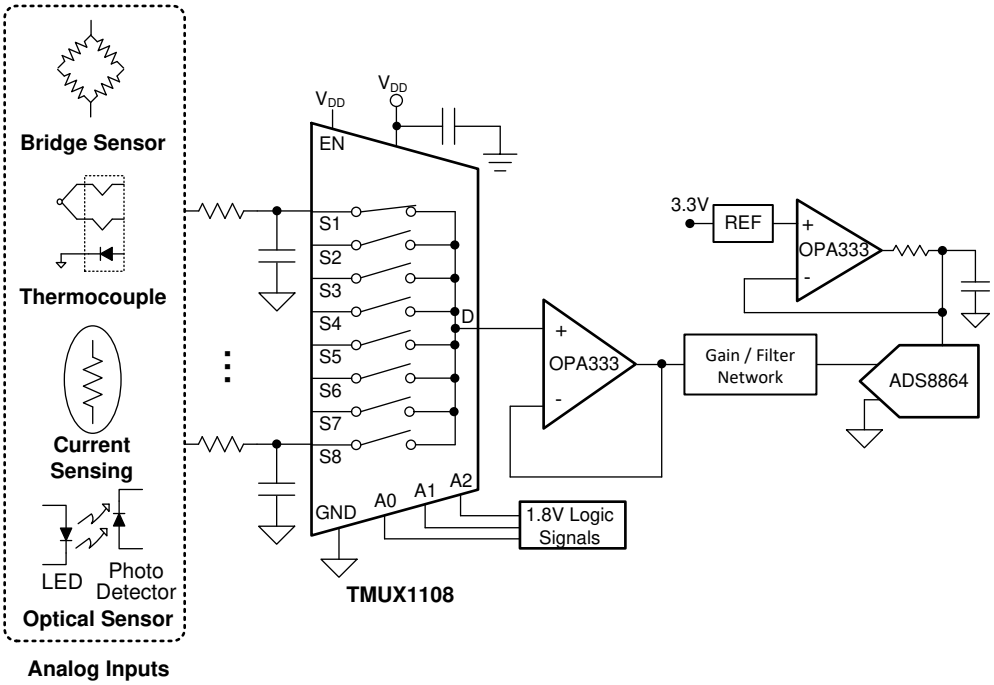

图 8-1. Multiplexing Signals to External ADC

8.2.1 Design Requirements

For this design example, use the parameters listed in 表 8-1.

表 8-1. Design Parameters

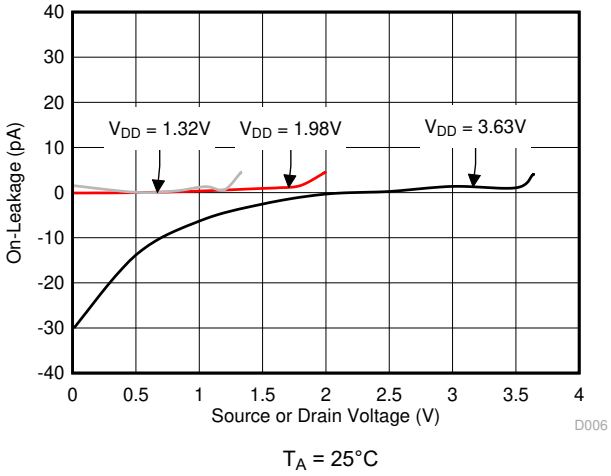
PARAMETERS	VALUES
Supply (V_{DD})	3.3V
I/O signal range	0V to V_{DD} (Rail to Rail)
Control logic thresholds	1.8V compatible

8.2.2 Detailed Design Procedure

The TMUX1108 can operate without any external components except for the supply decoupling capacitors. If the device desired power-up state is disabled, the enable pin should have a weak pull-down resistor and be controlled by the MCU via GPIO. All inputs being muxed to the ADC must fall within the recommend operating conditions of the TMUX1108 including signal range and continuous current. For this design with a supply of 3.3V the signal range can be 0V to 3.3V and the maximum continuous current can be 30mA.

The design example highlights a multiplexed, data-acquisition system for highest system linearity and fast settling. The overall system block diagram is shown in 图 8-1. The circuit is a multichannel, data-acquisition signal chain consisting of an input low-pass filter, mux, mux output buffer, SAR ADC driver, and the reference buffer. The architecture allows fast sampling of multiple channels using a single ADC, providing a low-cost solution.

8.2.3 Application Curve



T_A = 25°C

图 8-2. On-Leakage vs Source or Drain Voltage

8.3 Power Supply Recommendations

The TMUX1108 operates across a wide supply range of 1.08V to 5.5V. Do not exceed the absolute maximum ratings because stresses beyond the listed ratings can cause permanent damage to the devices.

Power-supply bypassing improves noise margin and prevents switching noise propagation from the V_{DD} supply to other components. Good power-supply decoupling is important to achieve optimum performance. For improved supply noise immunity, use a supply decoupling capacitor ranging from 0.1 μF to 10 μF from V_{DD} to ground. Place the bypass capacitors as close to the power supply pins of the device as possible using low-impedance connections. TI recommends using multi-layer ceramic chip capacitors (MLCCs) that offer low equivalent series resistance (ESR) and inductance (ESL) characteristics for power-supply decoupling purposes. For very sensitive systems or systems in harsh noise environments, connecting the capacitors to the device pins without vias may offer superior noise immunity. The use of multiple vias in parallel lowers the overall inductance and is beneficial for connections to ground planes.

8.4 Layout

8.4.1 Layout Guidelines

When a PCB trace turns a corner at a 90° angle, a reflection can occur. A reflection occurs primarily because of the change of width of the trace. At the apex of the turn, the trace width increases to 1.414 times the width. This increase upsets the transmission-line characteristics, especially the distributed capacitance and self-inductance of the trace which results in the reflection. Not all PCB traces can be straight and therefore some traces must turn corners. 图 8-3 shows progressively better techniques of rounding corners. Only the last example (BEST) maintains constant trace width and minimizes reflections.

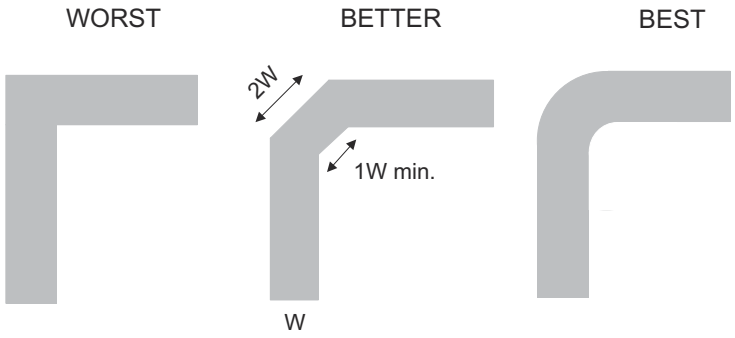


图 8-3. Trace Example

Route high-speed signals using a minimum of vias and corners which reduces signal reflections and impedance changes. When a via must be used, increase the clearance size around it to minimize its capacitance. Each via introduces discontinuities in the signal’s transmission line and increases the chance of picking up interference from the other layers of the board. Be careful when designing test points, through-hole pins are not recommended at high frequencies.

图 8-4 shows an example of a PCB layout with the TMUX1108. Some key considerations are as follows:

- Decouple the V_{DD} pin with a 0.1µF capacitor, placed as close to the pin as possible. Ensure that the capacitor voltage rating is sufficient for the V_{DD} supply.
- Keep the input lines as short as possible.
- Use a solid ground plane to help reduce electromagnetic interference (EMI) noise pickup.
- Do not run sensitive analog traces in parallel with digital traces. Avoid crossing digital and analog traces if possible, and only make perpendicular crossings when necessary.

8.4.2 Layout Example

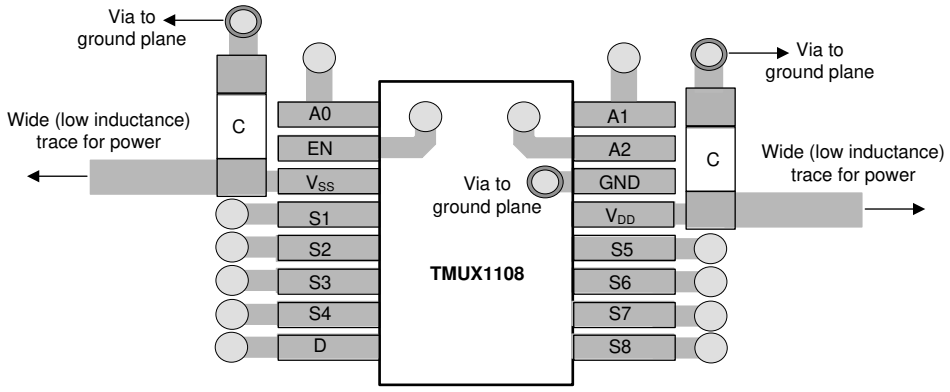

图 8-4. TMUX1108 Layout Example

9.2 接收文档更新通知

要接收文档更新通知，请导航至 ti.com 上的器件产品文件夹。点击*通知* 进行注册，即可每周接收产品信息更改摘要。有关更改的详细信息，请查看任何已修订文档中包含的修订历史记录。

9.3 支持资源

TI E2E™ 中文支持论坛是工程师的重要参考资料，可直接从专家处获得快速、经过验证的解答和设计帮助。搜索现有解答或提出自己的问题，获得所需的快速设计帮助。

链接的内容由各个贡献者“按原样”提供。这些内容并不构成 TI 技术规范，并且不一定反映 TI 的观点；请参阅 TI 的使用条款。

9.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.
所有商标均为其各自所有者的财产。

9.5 静电放电警告

静电放电 (ESD) 会损坏这个集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理和安装程序，可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级，大至整个器件故障。精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

9.6 术语表

TI 术语表　　本术语表列出并解释了术语、首字母缩略词和定义。

10 Revision History

注：以前版本的页码可能与当前版本的页码不同

Changes from Revision A (November 2018) to Revision B (February 2024)	Page
• Updated Is or Id (Continuous Current) values	4
• Added Ipeak values to Recommended Operating Conditions table	4

Changes from Revision * (November 2018) to Revision A (November 2018)	Page
• Added footnotes to *Absolute Maximum Ratings:* table	4
• Added RSV (QFN) thermal information to *Thermal Information:* table	5
• Added footnote to clarify test conditions	7
• Changed leakage current test conditions for dual supply	8

11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TMUX1108PWR	ACTIVE	TSSOP	PW	16	2000	RoHS & Green	NIPDAU	Level-1-260C-UNLIM	-40 to 125	TM1108	Samples
TMUX1108RSVR	ACTIVE	UQFN	RSV	16	3000	RoHS & Green	NIPDAU	Level-1-260C-UNLIM	-40 to 125	1B2	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

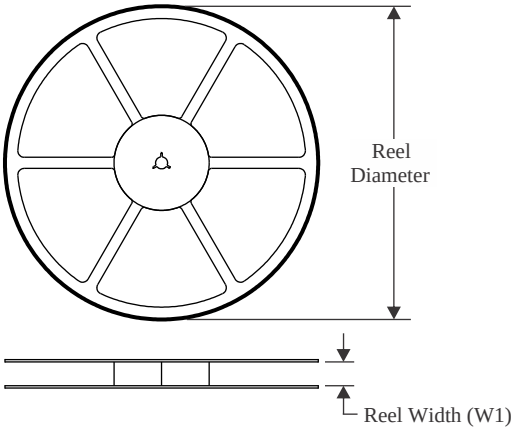
(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

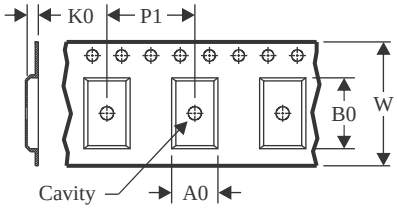
(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

TAPE AND REEL INFORMATION

REEL DIMENSIONS

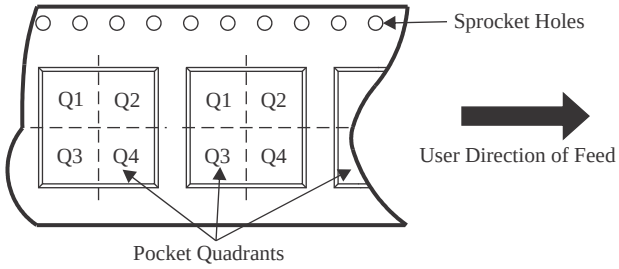


TAPE DIMENSIONS



A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

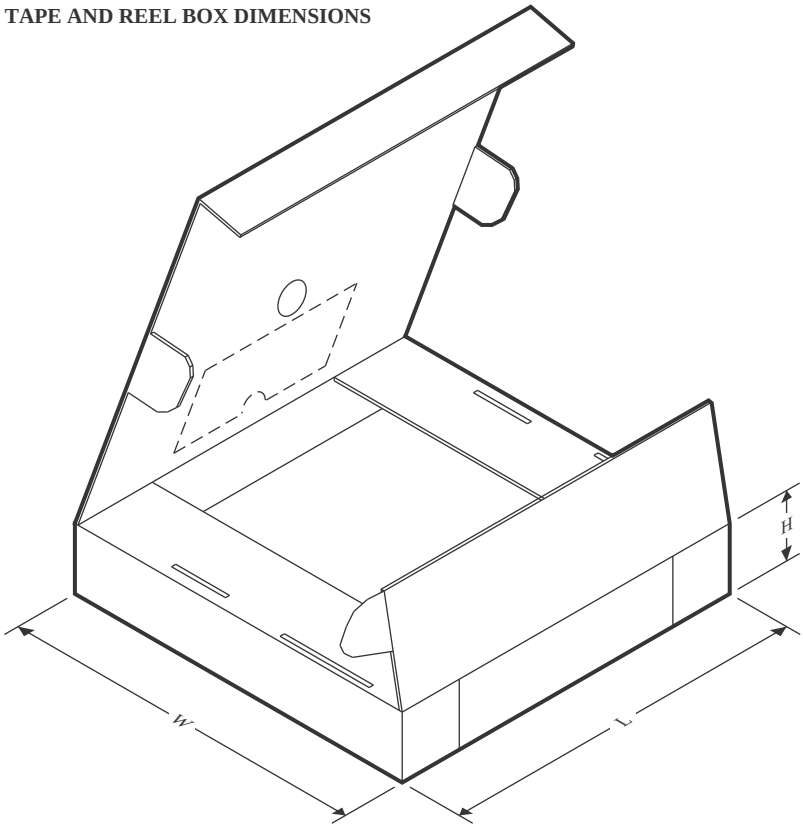
QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE



*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
TMUX1108PWR	TSSOP	PW	16	2000	330.0	12.4	6.9	5.6	1.6	8.0	12.0	Q1
TMUX1108RSVR	UQFN	RSV	16	3000	178.0	13.5	2.1	2.9	0.75	4.0	12.0	Q1

TAPE AND REEL BOX DIMENSIONS



*All dimensions are nominal

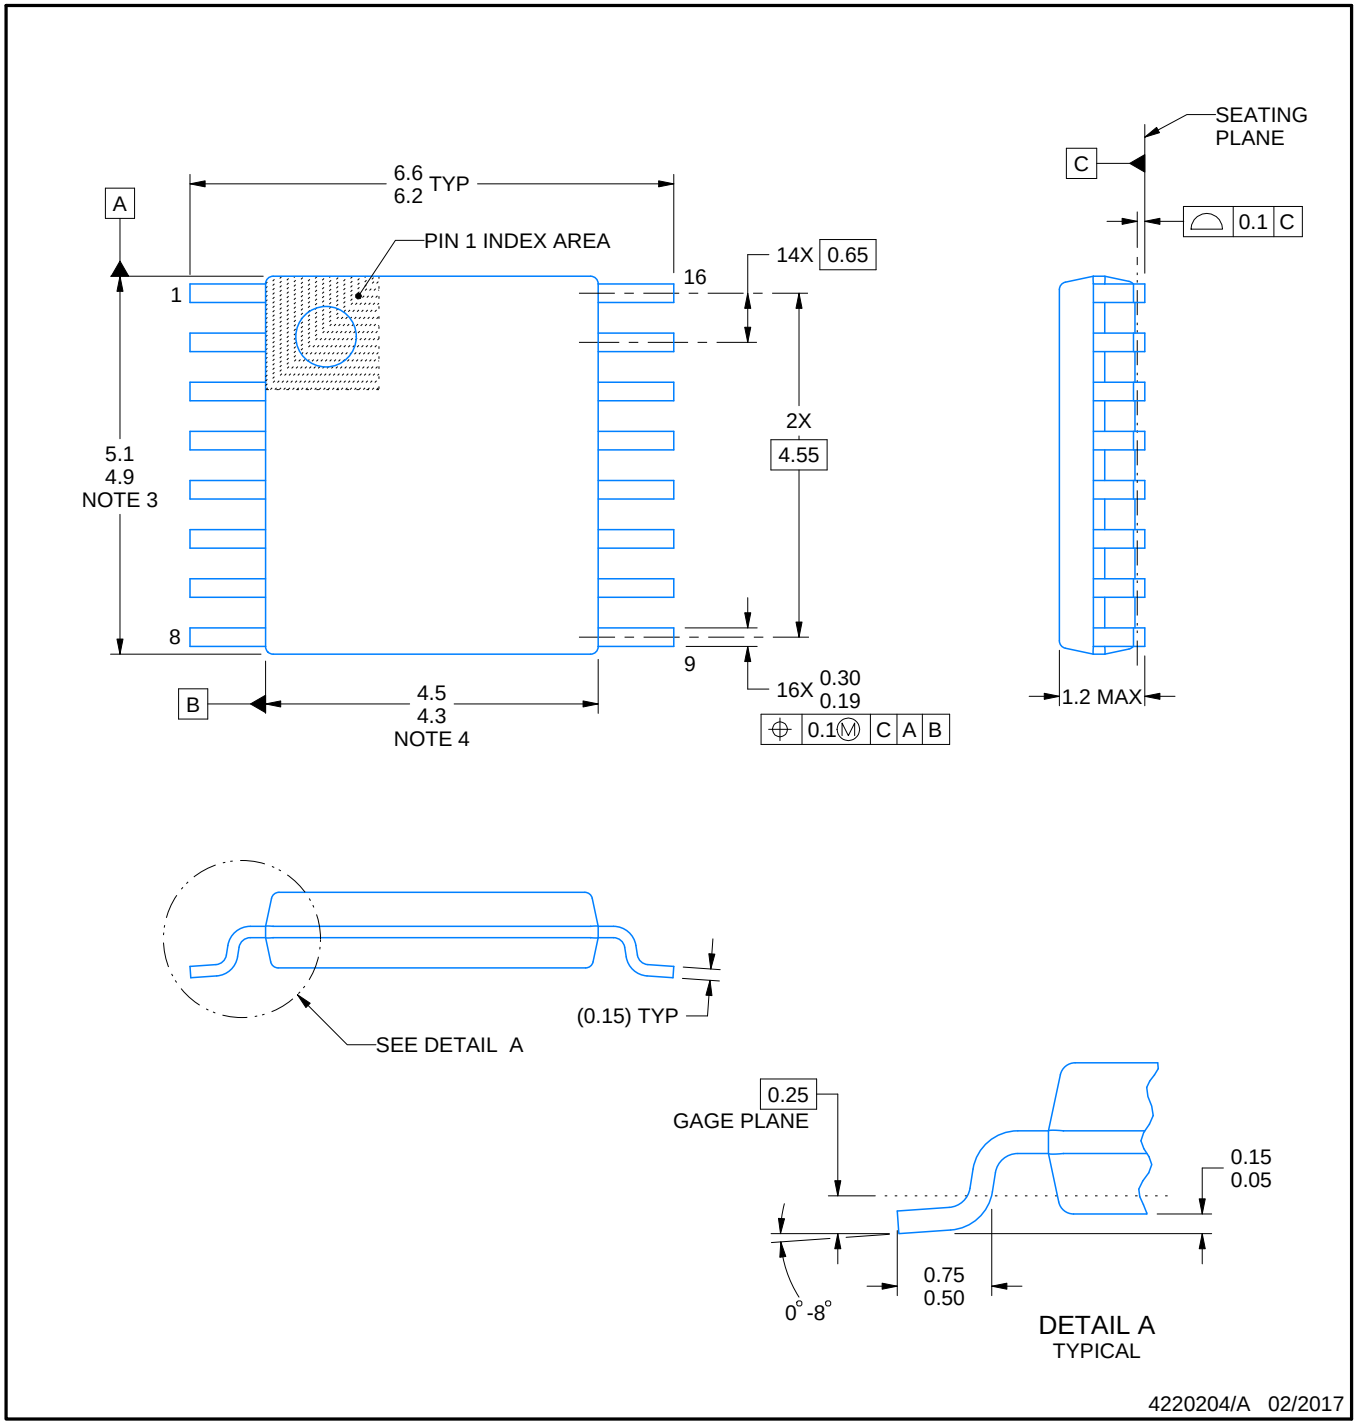
Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
TMUX1108PWR	TSSOP	PW	16	2000	356.0	356.0	35.0
TMUX1108RSVR	UQFN	RSV	16	3000	189.0	185.0	36.0

PACKAGE OUTLINE

PW0016A

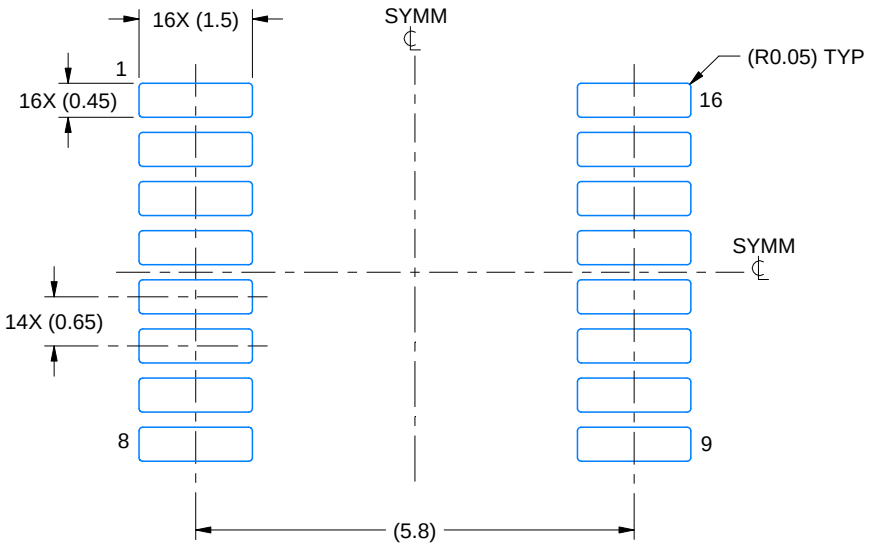
TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

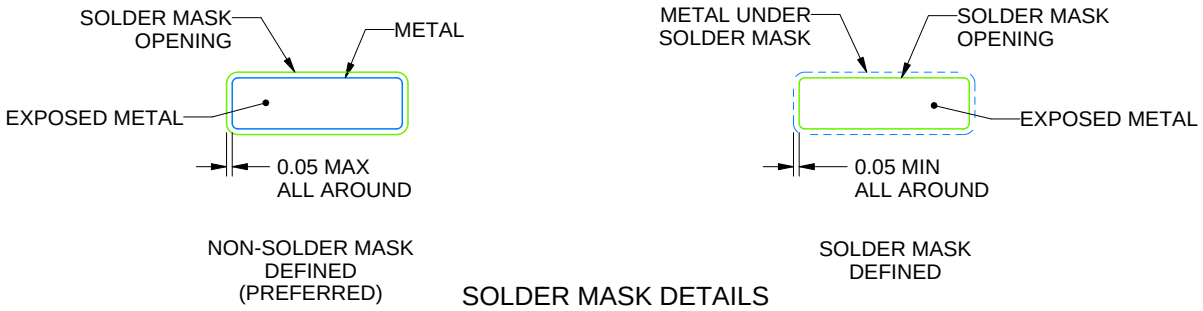


NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.
5. Reference JEDEC registration MO-153.



LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE: 10X

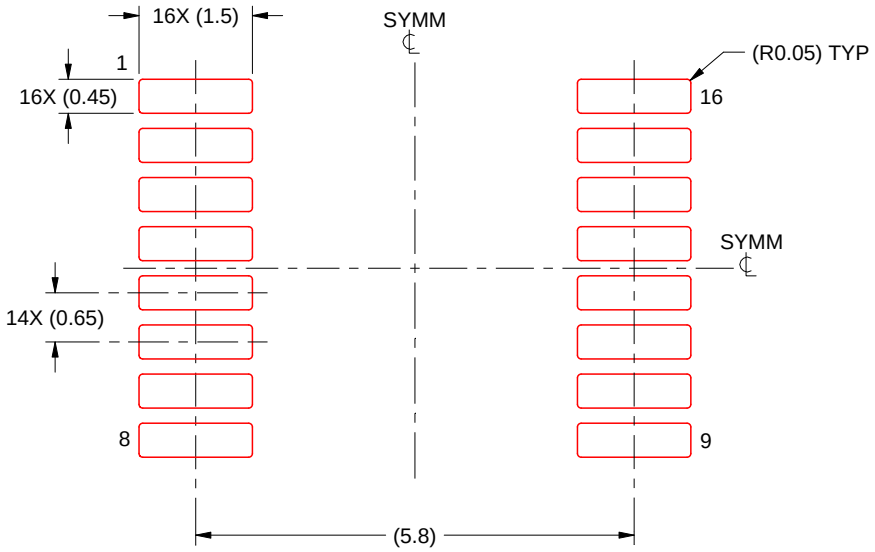


SOLDER MASK DETAILS

4220204/A 02/2017

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.



SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE: 10X

4220204/A 02/2017

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

GENERIC PACKAGE VIEW

RSV 16

UQFN - 0.55 mm max height

1.8 x 2.6, 0.4 mm pitch

ULTRA THIN QUAD FLATPACK - NO LEAD

This image is a representation of the package family, actual package may vary.
Refer to the product data sheet for package details.
