

TPD13S523 用于 HDMI 发送器端口的带有限流负载开关的 13 通道 ESD 保护解决方案

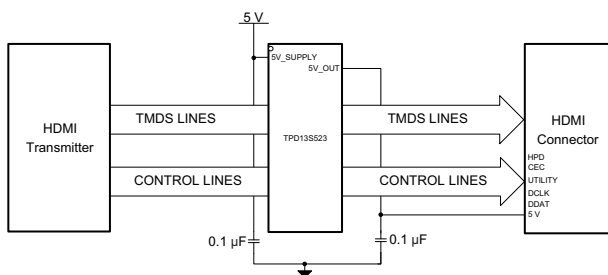

1 特性

- IEC 61000-4-2 4 级接触静电放电 (ESD) 保护
 - 外部线路上 $\pm 12\text{kV}$ 接触放电
- 适用于 HDMI 1.4 和 HDMI 1.3 接口的单芯片 ESD 解决方案
- 具有电流限制和反向电流保护功能的片载 5V 负载开关
- 支持针对 HDMI 1.4 音频返回线路的实用 (UTILITY) 线路保护
- 最小化传输差分信号 (TMDS) 信号对之间 $< 0.05\text{pF}$ 的差分电容
- 工业标准 16-TSSOP 和节省空间的 16-RSV 封装
- 支持超过 3.4Gbps 的数据速率
- $R_{\text{DYN}} = 0.5\Omega$ (典型值)
- 商业温度范围: -40°C 到 85°C

2 应用

- 终端设备
 - 机顶盒
 - 电子书
 - 平板电脑
 - 智能电话
 - 便携式摄像机
- 接口
 - HDMI

3 说明

TPD13S523 器件是一款集成 IEC 61000-4-2 ESD 保护的单芯片解决方案 (适用于 HDMI 1.4 或 HDMI 1.3 接口)。该器件提供 13 条 TVS 二极管通道, 带有与 HDMI 连接器高速线路匹配的直通引脚映射。在提供 ESD 保护的同时, TPD13S523 不会增加高速差分信号的额外失真。单片集成电路技术确保不同线路间的双信号对出色匹配 (TMDS 线路间的差分匹配 $< 0.05\text{pF}$)。这比离散 ESD 解决方案更具优势, 因为两个不同 ESD 保护电路间的差异可能显著降低差分信号质量。

TPD13S523 采用了片上电流限制负载开关, 符合 HDMI 5V 输出电气规范。5V_OUT 处的短路保护可确保器件不会损坏, 防止接 GND 意外短路。负载开关也采用了反向电流阻断功能, 可确保两个 HDMI 驱动器连接在一起时 HDMI 驱动器侧不会错误导通。

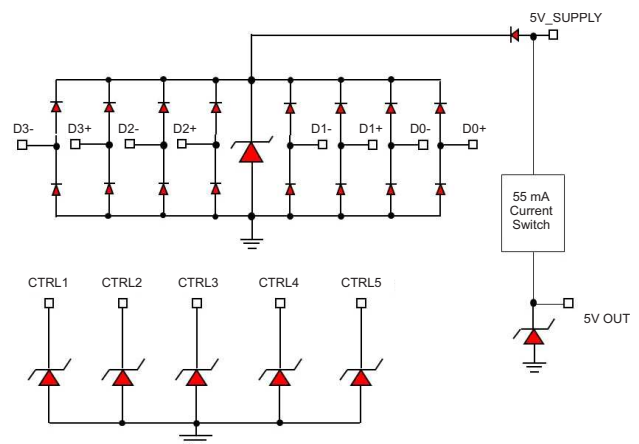

这些器件 TPD13S523, 包括机顶盒 (STB)、电子书、平板电脑、智能手机以及便携式摄像机。

7 Detailed Description

7.1 Overview

The TPD13S523 device is a single-chip ESD solution for the HDMI transmitter port. By providing system-level ESD protection for a full HDMI port, the TPD13S523 can protect the core IC from ESD strikes and absorb the associated energy.

While providing the ESD protection, the TPD13S523 adds little-to-no signal distortion to the high-speed differential signals. In addition, the monolithic integrated circuit technology ensures that there is excellent matching between the two-signal pair of the differential line.

The TPD13S523 also provides an on-chip regulator with current output ratings of 55 mA at pin 38. This current enables HDMI receiver detection even when the receiver device is powered off.

7.2 Functional Block Diagram

Figure 10. Electrical Equivalent Circuit Diagrams

7.3 Feature Description

7.3.1 IEC 61000-4-2 Protection

The connector-facing I/O pins can withstand ESD events up to ± 12 -kV contact and ± 14 -kV air. An ESD clamp diverts the current to ground.

7.3.2 Single-Chip ESD Solution

The TPD13S523 provides a complete ESD protection scheme for an HDMI 1.4 compliant port. No additional components are required for ESD protection and current-limiting besides this device.

Feature Description (continued)

7.3.3 On-Chip 5-V Load Switch

The TPD13S523 provides an on-chip regulator with a current output rating of 55-mA. This regulator also prevents reverse current flow from occurring, in compliance with the HDMI 5-V supply specification.

7.3.4 Supports UTILITY Line Protection

This device provides protection for all control lines in HDMI, including the UTILITY pin.

7.3.5 < 0.05-pF Differential Capacitance Between TMDS Pairs

The TPD13S523 has a very low capacitance variation (< 0.05 pF) between different TMDS ESD clamps. This provides excellent matching and does not degrade differential signal quality.

7.3.6 Industry Standard Package and Space-Saving Package

The TPD13S523 is offered in 2 different packages. A 16-pin industry standard TSSOP package is provided for ease of routing and easy layout. A 16-pin UQFN (RSV) is provided where small size is needed in the application.

7.3.7 Supports Data Rates in Excess of 3.4 Gbps

The TMDS ESD clamps have a very low capacitance that is capable of supporting HDMI data rates exceeding 3.4 Gbps.

7.3.8 $R_{DYN} = 0.5 \Omega$

The TMDS ESD clamps have a very low R_{DYN} of 0.5 Ω (typ) which provides excellent ESD protection clamping characteristics for the upstream core transmitter.

7.3.9 Commercial Temperature Range

The TPD13S523 is rated to operate from -40°C to 85°C.

7.4 Device Functional Modes

TPD13S523 is active with the conditions in the [Recommended Operating Conditions](#) met. Each connector side pin has an ESD clamp that triggers when voltages are greater than V_{BR} or less than the lower diode's V_f . During ESD events, voltages as high as ± 12 -kV contact ESD can be directed to ground through the internal diode network. Once the voltages on the protected line fall below these trigger levels (usually within 10's of nano-seconds), these pins revert to a nonconductive state.

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The TPD13S523 provides IEC 61000-4-2 Level 4 Contact ESD protection for an HDMI 1.4 transmitter port. An integrated current limit switch ensures compliance with the HDMI 5-V power supply requirements. This section presents a simplified discussion of the design process for this protection device.

8.2 Typical Application

A typical application schematic for an HDMI 1.4 transmitter port protected by the TPD13S523 is shown in [Figure 11](#). The eight TMDS lines and five control lines are connected to their respective pins for ESD protection. The 5-V power path is connected through the 55-mA current limit switch.

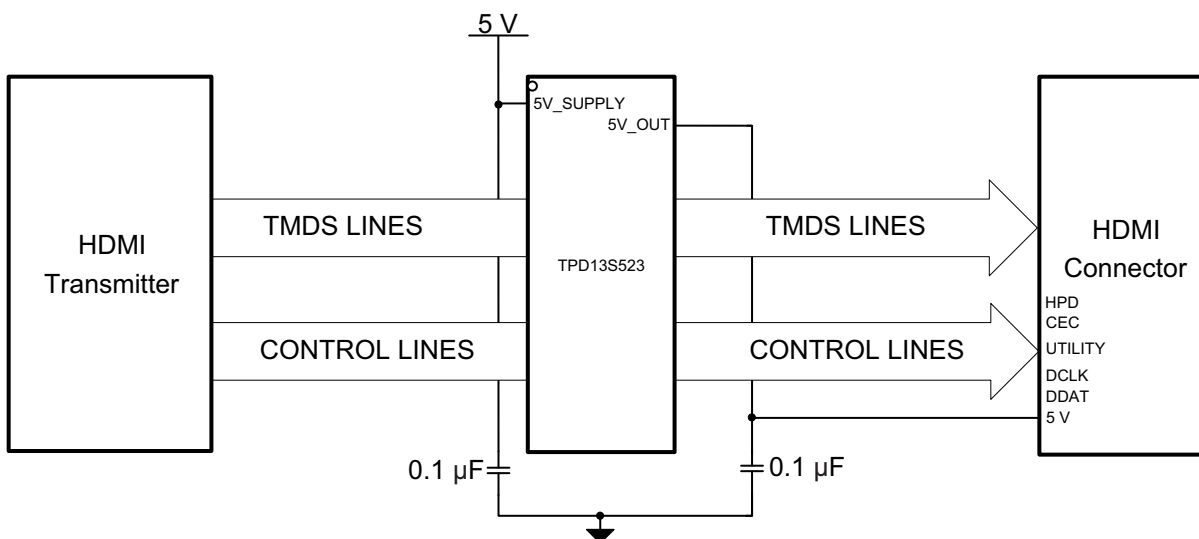

Figure 11. TPD13S523 Configured With an HDMI 1.4 Transmitter Port

8.2.1 Design Requirements

For this design example, use the parameters listed in [Table 1](#) as input parameters.

Table 1. Design Parameters

PARAMETER	EXAMPLE VALUE
Voltage on 5V_SUPPLY	4.8 V - 5.3 V
HDMI Data Rate	3.4 Gbps

8.2.2 Detailed Design Procedure

To begin the design process, the designer must know the following parameters:

- 5V_SUPPLY voltage range
- Maximum HDMI data rate

8.2.2.1 5V_SUPPLY Voltage Range

The TPD13S523 is capable of operating the 5V_SUPPLY up to 5.5 V, with recommended voltage from 4.5 V to 5.5 V. In this example, the supply range is 4.8 V to 5.3 V, which satisfies this requirement.

8.2.2.2 Maximum HDMI Data Rate

The TPD13S523 is capable of operating at HDMI data rates in excess of 3.4 Gbps, compliant to the HDMI 1.4 maximum data rate. In this example, the maximum HDMI 1.4 data rate of 3.4 Gbps has been chosen.

8.2.3 Application Curves

9 Power Supply Recommendations

The designer must consider the requirement for the 5V_OUT voltage level. To ensure the voltage is within tolerance under load, set 5V_SUPPLY to at least $4.8\text{ V} + V_{\text{DROPP}}$ (205 mV). Otherwise, TPD13S523 is a passive ESD protection device and there is no need to power it.

10 Layout

10.1 Layout Guidelines

The TPD13S523 device offers little or no signal distortion during normal operation due to low I/O capacitance and ultra-low leakage current specifications. In the event of an ESD stress, this device ensures that the core circuitry is protected and the system is functioning properly. For proper operation, the following layout and design guidelines should be followed:

1. Place the TPD13S523 as close to the connector as possible. This allows the TPD13S523 to remove the energy associated with ESD strike before it reaches the internal circuitry of the system board.
2. Place two 0.1- μF capacitors very close to the 5V_SUPPLY and 5V_OUT pins. These capacitors will help limit the noise at the 5V_OUT power line, and also help with system level ESD protection.
3. Ensure that there is enough metallization for the GND pad. During normal operation, the TPD13S523 ESD pins consume ultra-low leakage current. During the ESD event, GND pin will see multiple amps of current. A sufficient current path enables safe discharge of all the energy associated with the ESD strike.
4. The critical routing paths for HDMI interface are the high-speed TMDS lines. With the PW package, all the TMDS lines (pin Dxx) can be routed in a single signal plane and still maintain the differential coupling and trace symmetry. This helps reduce the overall board manufacturing cost. The slow speed control lines can be routed in another signal layer through vias.
5. If the UTILITY or any other pin is not utilized, tie the pin to a ground rather than leave floating. Use a 75- Ω resistor to protect against shorts to ground.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
