### 3 说明

TPS370x-xx 系列微处理器电源电压监控器主要为 DSP 以及基于其他处理器的系统提供电路初始化和时序监控。

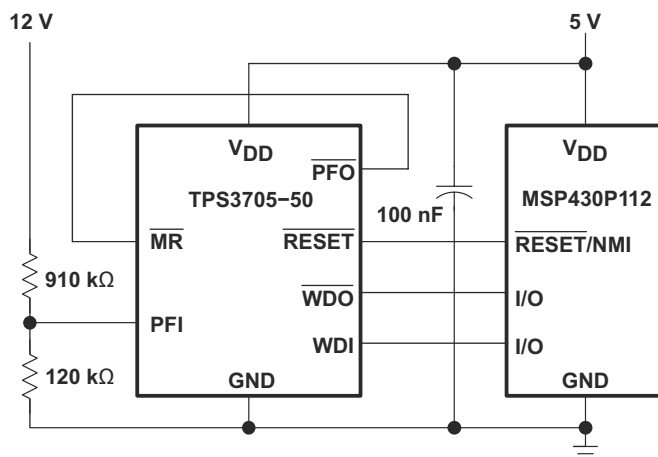

上电期间, 如果电源电压  $V_{DD}$  大于 1.1V,  $\overline{RESET}$  就会生效。因此, 只要  $V_{DD}$  保持在阈值电压  $V_{IT+}$  以下, 电源电压监控器就会监测  $V_{DD}$ , 并使  $\overline{RESET}$  保持有效状态。当电源电压降到阈值电压  $V_{IT-}$  以下时, 输出再次变为有效状态 ( 低电平 )。无需外部组件。该系列中的所有器件均具有一个通过内部分压器设定的固定检测阈值电压  $V_{IT-}$ 。

该产品系列专为 2.5V、3V、3.3V 以及 5V 电源电压而设计。这些电路采用 8 引脚 MSOP 或标准 SOIC 封装。TPS370x-xx 器件的额定工作温度范围为 -40 $^{\circ}$ C 至 85 $^{\circ}$ C。

## 8 Detailed Description

### 8.1 Overview

The TPS370x-xx family of supervisors feature an integrated reference and comparator for  $V_{DD}$  supervision, an additional power-fail supervisor, and a manual reset input. The TPS3705-xx devices feature a watchdog timer, where the TPS3707-xx devices feature a complimentary RESET output.

### 8.2 Functional Block Diagram

### 8.3 Feature Description

#### 8.3.1 Manual Reset Input

The TPS370x-xx devices incorporate a manual reset input,  $\overline{MR}$ . A low level at  $\overline{MR}$  causes  $\overline{RESET}$  to become active.

#### 8.3.2 Power-Fail Comparator

The TPS370x-xx family integrates a power-fail comparator which can be used for low-battery detection, power-fail warning, or for monitoring a power supply other than the main supply.

#### 8.3.3 Watchdog Timer

The TPS3705-xx devices have a watchdog timer that is periodically triggered by a positive or negative transition at WDI. When the supervising system fails to retrigger the watchdog circuit within the timeout interval,  $t_{t(out)} = 1.6$  s,  $\overline{WDO}$  becomes active. This event also reinitializes the watchdog timer. Leaving WDI unconnected disables the watchdog.

The TPS3707-xx devices do not have the watchdog function, but include a high-level output RESET.

## 8.4 Device Functional Modes

### 8.4.1 $V_{DD} < 1.1\text{ V}$

When  $V_{DD}$  is less than 1.1 V, the status of the outputs cannot be determined.

### 8.4.2 $1.1\text{ V} < V_{DD} \leq 2\text{ V}$

When  $V_{DD}$  is greater than 1.1 V but less than 2 V, the output states are valid. However, the specifications in [节 7.5](#) do not apply.

### 8.4.3 $2\text{ V} < V_{DD} < 6\text{ V}$

When  $V_{DD}$  is greater than 2 V but less than 6 V, the device is within the recommended operating conditions (see [节 7.3](#)). See [表 8-1](#), [表 8-2](#), and [表 8-3](#) for corresponding truth tables.

### 9.1 Application Information

The TPS370x-xx family of devices offers several options for power monitoring. The TPS3705-xx offers a watchdog supervisor,  $V_{DD}$  rail monitoring, and a power-fail interrupt monitor. The TPS3707-xx offers  $V_{DD}$  rail monitoring with complimentary outputs and a power-fail interrupt monitor.

#### 9.2.1 Design Requirements

表 9-1 lists the required design parameters for 图 9-1.

表 9-1. Application Parameters

DESIGN PARAMETER	VALUE
Monitored voltage 1	5 V
Monitored voltage 2	12 V

#### 9.2.2 Detailed Design Procedure

To create two voltage monitoring rails, the PFI input can be used along with the MR pin to create a single output. The 5-V monitor is created by selecting a 5-V device option, giving threshold of 4.55 V. The PFI input is configured to any adjustable rail with a voltage divider. Use 方程式 1 to select resistors.

$$V_{TH} = \frac{R_1 + R_2}{R_2} \times V_{IT-} = \frac{910\text{ k} + 120\text{ k}}{120\text{ k}} \times 1.25 = 10.73\text{ V} \quad (1)$$

## 10 Power Supply Recommendations

These devices are designed to operate from an input supply with a voltage range from 2 V to 6 V.

## 11 Layout

### 11.1 Layout Guidelines

Place a 0.1- $\mu$ F decoupling capacitor as close to the device as possible.

If a resistor divider is used, place the resistors as close to the device as possible to minimize noise coupling.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

<sup>(5)</sup> Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
