

TVS2700 27V 平缓钳位浪涌保护器件

1 特性

- 保护特性符合针对工业信号线路的 $\pm 1\text{kV}$ 、 42Ω IEC 61000-4-5 浪涌测试要求
- 40A、 $8/20\mu\text{s}$ 浪涌电流下的最大钳位电压为 35V
- 关态电压：27V
- 4mm^2 小型封装尺寸
- 在 125°C 时，可耐受超过 5,000 次的 35A $8/20\mu\text{s}$ 浪涌电流的重复冲击
- 强大的浪涌保护：
 - IEC 61000-4-5 ($8/20\mu\text{s}$): 40A
 - IEC 61643-321 ($10/1000\mu\text{s}$): 4A
- 低泄漏电流
 - 27°C 下为 1.8nA (典型值)
 - 85°C 下为 14.5nA (典型值)
- 低电容：100pF
- 集成 4 级 IEC 61000-4-2 ESD 保护

2 应用

- 工业传感器 I/O
- 医疗设备
- PLC I/O 模块
- 电器
- 现场发送器

3 说明

TVS2700 可将高达 40A 的 IEC 61000-4-5 故障电流进行可靠分流，以保护系统免受高功率瞬态冲击或雷击。该器件为满足常见的工业信号线路 EMC 要求提供了解决方案，可通过 42Ω 阻抗进行耦合的方式承受高达 $\pm 1\text{kV}$ 的 IEC 61000-4-5 开路电压。TVS2700 使用独特的反馈机制确保在故障期间发挥精确的平缓钳位能力，保证系统接触电压低于 35V。精确的电压调节允许设计人员放心地选择具有较低电压容差的系统组件，不但减少了系统成本和复杂度，而且不损害可靠性。

此外，TVS2700 还采用 $2\text{mm} \times 2\text{mm}$ 小型 SON 封装，适用于空间受限的应用，与业内标准的 SMA 和 SMB 封装相比，尺寸减小了 70%。极低的器件泄露电流和电容确保最大限度地降低了对受保护线路的影响。为了确保在产品的整个寿命期间提供可靠保护，TI 在高温环境下对 TVS2700 进行了 5,000 次重复浪涌冲击测试，但器件性能未发生任何变化。

TVS2700 是 TI 的平缓钳位系列浪涌器件中的一款产品。有关该系列其他器件的更多信息，请参阅 [器件比较表](#)。

8 Detailed Description

8.1 Overview

The TVS2700 is a precision clamp with a low, flat clamping voltage during transient overvoltage events like surge and protecting the system with zero voltage overshoot. For a detailed overview of the Flat-Clamp family of devices, please reference TI's [Flat-Clamp surge protection technology for efficient system protection](#) white paper. This document explains in detail the functional operation of the devices and how they impact and improve system design.

8.2 Functional Block Diagram

Copyright © 2017, Texas Instruments Incorporated

8.3 Feature Description

The TVS2700 is a precision clamp that handles 40 A of IEC 61000-4-5 8/20 μ s surge pulse. The flat clamping feature helps keep the clamping voltage very low to keep the downstream circuits from being stressed. The flat clamping feature can also help end-equipment designers save cost by opening up the possibility to use lower-cost lower voltage tolerant downstream ICs. The TVS2700 has minimal leakage under the standoff voltage of 27 V, making it an ideal candidate for applications where low leakage and power dissipation is a necessity. IEC 61000-4-2 and IEC 61000-4-4 ratings make it a robust protection solution for ESD and EFT events. Wide ambient temperature range of -40°C to $+125^{\circ}\text{C}$ makes it a good candidate for most applications. Compact packages enable it to be used in small devices and save board area.

8.4 Reliability Testing

To ensure device reliability, the TV2700 is characterized against 5000 repetitive pulses of 35 A IEC 61000-4-5 8/20 μ s surge pulses at 125°C . The test is performed with less than 10 seconds between each pulse at high temperature to simulate worst case scenarios for fault regulation. After each surge pulse, the TVS2700 clamping voltage, breakdown voltage, and leakage are recorded to ensure that there is no variation or performance degradation. By ensuring robust, reliable, high temperature protection, the TVS2700 enables fault protection in applications that must withstand years of continuous operation with no performance change.

8.5 Device Functional Modes

8.5.1 Protection Specifications

The TVS2700 is specified according to both the IEC 61000-4-5 and IEC 61643-321 standards. This enables usage in systems regardless of which standard is required in relevant product standards or best matches measured fault conditions. The IEC 61000-4-5 standard requires protection against a pulse with a rise time of 8 μs and a half length of 20 μs while the IEC 61643-321 standard requires protection against a much longer pulse with a rise time of 10 μs and a half length of 1000 μs .

The positive and negative surges are imposed to the TVS2700 by a combinational waveform generator (CWG) with a 2- Ω coupling resistor at different peak voltage levels. For powered on transient tests that need power supply bias, inductances are usually used to decouple the transient stress and protect the power supply. The TVS2700 is post tested by guaranteeing that there is no shift in device breakdown or leakage at V_{rwm} .

In addition, the TVS2700 has been tested according to IEC 61000-4-5 to pass a ± 1 kV surge test through a 42- Ω coupling resistor and a 0.5 μF capacitor. This test is a common test requirement for industrial signal I/O lines and the TVS2700 will serve an ideal protection solution for applications with that requirement.

The TVS2700 also integrates IEC 61000-4-2 Level 4 ESD Protection and 80 A of IEC 61000-4-4 EFT Protection. These combine to ensure that the device can protect against all transient conditions regardless of length or type.

For more information on TI's test methods for Surge, ESD, and EFT testing, reference [TI's IEC 61000-4-x Testing Application Note](#).

8.5.2 Minimal Derating

Unlike traditional diodes the TVS2700 has very little derating of max power dissipation and ensures robust performance up to 125°C shown in [Figure 8](#). Traditional TVS diodes lose up to 50% of their current carrying capability when at high temperatures, so a surge pulse above 85°C ambient can cause failures that are not seen at room temperature. The TVS2700 prevents this and ensures that you will see the same level of protection regardless of temperature.

8.5.3 Transient Performance

During large transient swings, the TVS2700 will begin clamping the input signal to protect downstream conditions. While this prevents damage during fault conditions, it can cause leakage when the intended input signal has a fast slew rate. In order to keep power dissipation low and remove the chance of signal distortion, it is recommended to keep the slew rate of any input signal on the TVS2700 below 2.5 V/ μs at room temperature and below 0.7 V/ μs at 125°C shown in [Figure 9](#). Faster slew rates will cause the device to clamp the input signal and draw current through the device for a few microseconds, increasing the rise time of the signal. This will not cause any harm to the system or to the device, however if the fast input voltage swings occur regularly it can cause device overheating.

9 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The TVS2700 can be used to protect any power, analog, or digital signal from transient fault conditions caused by the environment or other electrical components.

9.2 Typical Application

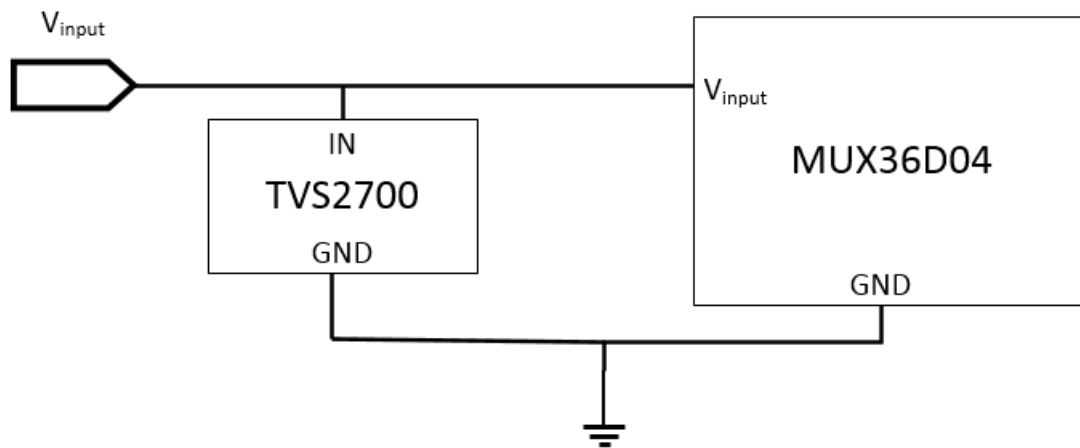

图 10. TVS2700 Application Schematic

9.2.1 Design Requirements

A typical operation for the TVS2700 would be in a multi-channel PLC protecting an analog input, shown in [图 10](#). In this example, a TVS2700 is protecting the input to a MUX36D04, a four channel input multiplexer with a supply max at 36 V. Without any input protection, if a surge event is caused by lightning, coupling, ringing, or any other fault condition this input voltage will rise to hundreds of volts for multiple microseconds, violating the absolute maximum input voltage and harming the device. An ideal surge protection diode will maximize the useable voltage range while still clamping at a safe level for the system, so TI's Flat-Clamp technology provides the best protection solution.

9.2.2 Detailed Design Procedure

If the TVS2700 is in place to protect the device, during a surge event the voltage will rise to the breakdown of the diode at 31.2 V, and then the TVS2700 will turn on, shunting the surge current to ground. With the low dynamic resistance of the TVS2700, even large amounts of surge current will have minimal impact on the clamping voltage. The dynamic resistance of the TVS2700 is around 30 m Ω , which means 40 A of surge current will cause a voltage raise of $40 \text{ A} \times 30 \text{ m}\Omega = 1.2 \text{ V}$. Because the device turns on at 31 V, this means the module input will be exposed to a maximum of $31.2 \text{ V} + 1.2 \text{ V} = 33.3 \text{ V}$ during surge pulses, well within the MUX36D04 absolute maximum. This pulse is shown in [Figure 11](#) and ensures robust protection of the circuit.

Typical Application (接下页)

Finally, the small size of the device also improves fault protection by lowering the effect of fault current coupling onto neighboring traces. The small form factor of the TVS2700 allows the device to be placed extremely close to the input connector, lowering the length of the path fault current will take through the system compared to larger protection solutions.

9.2.3 Application Curves

9.2.4 Configuration Options

The TVS2700 can be used in either unidirectional or bidirectional configuration. The TVS2700 shows unidirectional usage to protect an input. By placing two TVS2700's in series with reverse orientation, bidirectional operation can be utilized which will allow a working voltage of ± 27 V. The TVS2700 operation in bidirectional will be similar to unidirectional operation, with a minor increase in breakdown voltage and clamping voltage. The TVS3300 bidirectional performance has been characterized in the [TVS3300 Configurations Characterization](#). While the TVS2700 in bidirectional configuration has not specifically been characterized, it will have similar relative changes to the TVS3300 in bidirectional configuration.

10 Power Supply Recommendations

The TVS2700 is a clamping device so there is no need to power it. Be careful not to violate the recommended V_{IN} voltage range (0 V to 27 V) to ensure the device functions properly.

11 Layout

11.1 Layout Guidelines

The optimum placement is as close to the connector as possible. EMI during an ESD event can couple from the trace being struck to other nearby unprotected traces, resulting in early system failures. The PCB designer must minimize the possibility of EMI coupling by keeping any unprotected traces away from the protected traces which are between the TVS and the connector.

Route the protected traces as straight as possible.

Eliminate any sharp corners on the protected traces between the TVS2700 and the connector by using rounded corners with the largest radii possible. Electric fields tend to build up on corners, increasing EMI coupling.

11.2 Layout Example

12.1 接收文档更新通知

要接收文档更新通知，请导航至 TI.com.cn 上的器件产品文件夹。请单击右上角的 **提醒我** 进行注册，即可每周接收产品信息更改摘要。有关更改的详细信息，请查看任何已修订文档中包含的修订历史记录。

12.2 社区资源

下列链接提供到 TI 社区资源的连接。链接的内容由各个分销商“按照原样”提供。这些内容并不构成 TI 技术规范，并且不一定反映 TI 的观点；请参阅 TI 的 [《使用条款》](#)。

TI E2E™ 在线社区 *TI 的工程师对工程师 (E2E) 社区*。此社区的创建目的在于促进工程师之间的协作。在 e2e.ti.com 中，您可以咨询问题、分享知识、拓展思路并与同行工程师一道帮助解决问题。

设计支持 *TI 参考设计支持* 可帮助您快速查找有帮助的 E2E 论坛、设计支持工具以及技术支持的联系信息。

12.3 商标

E2E is a trademark of Texas Instruments.

12.4 静电放电警告

ESD 可能会损坏该集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理措施和安装程序，可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级，大至整个器件故障。精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

12.5 Glossary

SLYZ022 — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 机械、封装和可订购信息

以下页面包含机械、封装和可订购信息。这些信息是指定器件的最新可用数据。数据如有变更，恕不另行通知，且不会对此文档进行修订。如需获取此数据表的浏览器版本，请查阅左侧的导航栏。

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TVS2700DRVR	ACTIVE	WSON	DRV	6	3000	RoHS & Green	NIPDAU	Level-1-260C-UNLIM	-40 to 125	1HTH	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
