TUSB211A USB 2.0 480Mbps 高速シグナル・コンディショナ

1 特長

- 広い電源電圧範囲:2.3～6.5V
- USB 切断時およびシャットダウン時の非常に低い消費電力
- USB 2.0 High-Speed 信号のコンディショニングを提供
- USB 2.0、OTG 2.0、BC 1.2 に対応
- Low-Speed、Full-Speed、High-Speed 信号処理のサポート
- 特定のホストやデバイスに非依存
- 最大 5m のケーブル長をサポート
  - 外付けのプルダウン抵抗により 4 つの信号 EQ (エッジ・ブーストと DC ブースト) 設定を選択可能
- 2 つの TUSB211A デバイスを使って最大 10m のケーブル長に対応
- スケーラブルなソリューション - 損失が大きいアプリケーションに対応するため、デバイスをデイジー・チェーン接続可能
- TUSB211、212、214、216、217A (3.3V) とピン互換

2 アプリケーション

- ラップトップ、デスクトップまたはドッキング・ステーション
- 携帯電子機器
- タブレット
- 携帯電話
- テレビ
- アクティブ・ケーブル、延長ケーブル、バックプレーン

3 概要

TUSB211A は第 3 世代 USB 2.0 High Speed 信号コンディショナーで、伝送チャネルでの AC 損失 (容量性負荷による) および DC 損失 (抵抗損失による) を補償するように設計されています。

TUSB211A には、エッジ・ブースタにより USB 2.0 High Speed 信号の遷移エッジを高速化し、DC ブースト機能により静的電圧レベルを上げる特許取得済みの設計が採用されています。

また、TUSB211A はプリイコライゼーション機能を備えているため、長いケーブルを使用するアプリケーションで ISI (符号間干渉) ジッタを補償できます。USB Low Speed および Full Speed 信号特性は、TUSB211A による影響を受けません。

TUSB211A は、パケット・タイミングを変更せず、また、伝搬遅延やレイテンシを追加せずに、信号品質を向上させることができます。

TUSB211A により、最長 5 メートルのケーブルを使用したシステムで、USB 2.0 High Speed 近端アイ・コンプライアンスに合格することが可能になります。

TUSB211A は、USB On-The-Go (OTG) および Battery Charging (BC) プロトコルにも対応しています。

表 5-1. Pin Functions

PIN		TYPE(1)	INTERNAL PULLUP/PULLDOWN	DESCRIPTION
NAME	NO.			
EQ	6	I	N/A	USB High-speed EQ select via external pull down resistor. Both edge boost and DC boost are controlled by a single pin. Sampled upon power up. Does not recognize real time adjustments. Auto selects EQ LEVEL = 3 when left floating.
RESERVED	11	I	500 kΩ PU	Reserved pin for TI test purposes. Leave floating or connect external capacitor to GND for normal operation.
ENA_HS	9	I/O	N/A	After reset: Output signal ENA_HS. Flag indicating that channel is in High-speed mode. Asserted upon: 1. Detection of USB-IF High-speed test fixture from an unconnected state followed by transmission of USB TEST_PACKET pattern. 2. Squelch detection following USB reset with a successful HS handshake [HS handshake is declared to be successful after single chirp J chirp K pair where each chirp is within 18 µs – 128 µs].
D2P	7	I/O	N/A	USB High-speed positive port.
D2M	8	I/O	N/A	USB High-speed negative port.
GND	10	P	N/A	Ground
D1M	1	I/O	N/A	USB High-speed negative port.
D1P	2	I/O	N/A	USB High-speed positive port.
RESERVED	3	I/O	500 kΩ PU 1.8 MΩ PD	Reserved pin for TI test purposes. Leave floating for normal operation.
VCC	12	P	N/A	Supply power
RSTN	5	I	500 kΩ PU 1.8 MΩ PD	Device disable/enable. Low – Device is at reset and in shutdown, and High - Normal operation. Recommend 0.1-µF external capacitor to GND to ensure clean power on reset if not driven. If the pin is driven, it must be held low until the supply voltage for the device reaches within specifications.
CD	4	O	When RSTN asserted there is a 500 kΩ PD	After reset: Output CD. Flag indicating that a USB device is attached (connection detected). Asserted from an unconnected state upon detection of DP or DM pull-up resistor. De-asserted upon detection of disconnect.

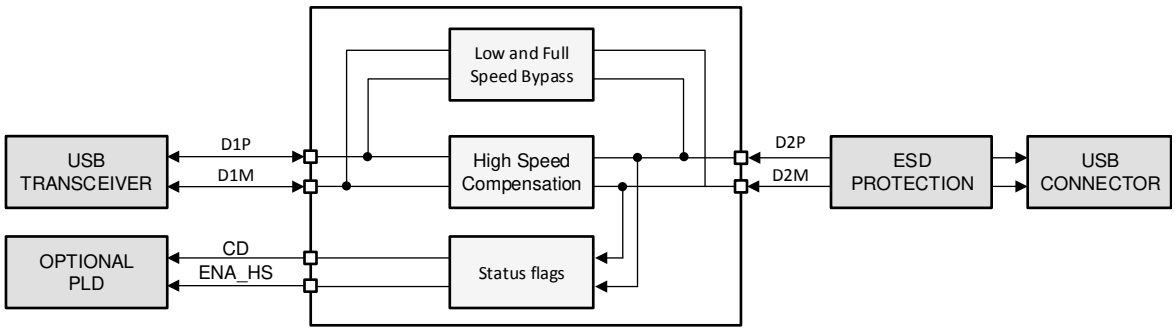
7 Detailed Description

7.1 Overview

The TUSB211A is a USB High-Speed (HS) signal conditioner designed to compensate for ISI signal loss in a transmission channel. TUSB211A has a patented design for USB Low Speed (LS) and Full Speed (FS) signals. It does not alter the signal characteristics. HS signals are compensated. The design is compatible with USB On-The-Go (OTG) and Battery Charging (BC) specifications.

Programmable signal gain through an external resistor permits fine tuning device performance to optimize signals. This helps pass USB HS electrical compliance tests at the connector. The TUSB211A allows application in series to cover longer distances, or high loss transmission paths. A maximum of 4 devices can be daisy-chained.

7.2 Functional Block Diagram



7.3 Feature Description

7.3.1 High-Speed EQ

The high-speed EQ (combination of edge boost and DC boost) improves the eye width for USB2.0 high-speed signals. It is direction independent and by that is compatible to OTG systems. The EQ pin is configuring the EQ strength with different values of pull down resistors to set 4 levels of EQ.

7.4 Device Functional Modes

7.4.1 Low-Speed (LS) Mode

TUSB211A automatically detects an LS connection and does not enable signal compensation. CD pin is asserted high but ENA_HS will be low.

7.4.2 Full-Speed (FS) Mode

TUSB211A automatically detects an FS connection and does not enable signal compensation. CD pin is asserted high but ENA_HS will be low.

7.4.3 High-Speed (HS) Mode

TUSB211A automatically detects an HS connection and will enable signal compensation as determined by the external pull down resistance on its EQ pin.

CD pin and ENA_HS pin are asserted high when high-speed EQ is active.

7.4.4 High-Speed Downstream Port Electrical Compliance Test Mode

TUSB211A will detect an HS compliance test fixture and enter the downstream port high-speed eye diagram test mode. CD pin will be low and ENA_HS pin is asserted high when TUSB211A is in HS eye compliance test mode.

If the RSTN pin is asserted low and de-asserted high while TUSB211A is operating in HS functional mode, then TUSB211A will transition to HS eye compliance test mode, the CD asserts low, and ENA_HS remains high. When all this occurs, signal compensation is enabled.

7.4.5 Shutdown Mode

TUSB211A can be disabled when its RSTN pin is asserted low. DP, DM traces are continuous through the device in shutdown mode. The USB channel is still fully operational, but there is neither signal compensation, nor any indication from the CD pin as to the status of the channel.

8 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

8.1 Application Information

The purpose of the TUSB211A is to restore the signal integrity of a USB High-speed channel up to the USB connector. The loss in signal quality stems from reduced channel bandwidth due to high loss PCB trace and other components that contribute a capacitive load. This can cause the channel to fail the USB near end eye mask. Proper use of the TUSB211A can help to pass this eye mask.

A secondary purpose is to use the CD pin of the TUSB211A to control other blocks on the customer platform, if so desired.

8.2 Typical Application

A typical application for TUSB211A is shown in 図 8-1. In this setup, D2P and D2M face the USB connector while D1P and D1M face the USB host. The orientation may be reversed [that is, D2 faces transceiver and D1 faces connector].

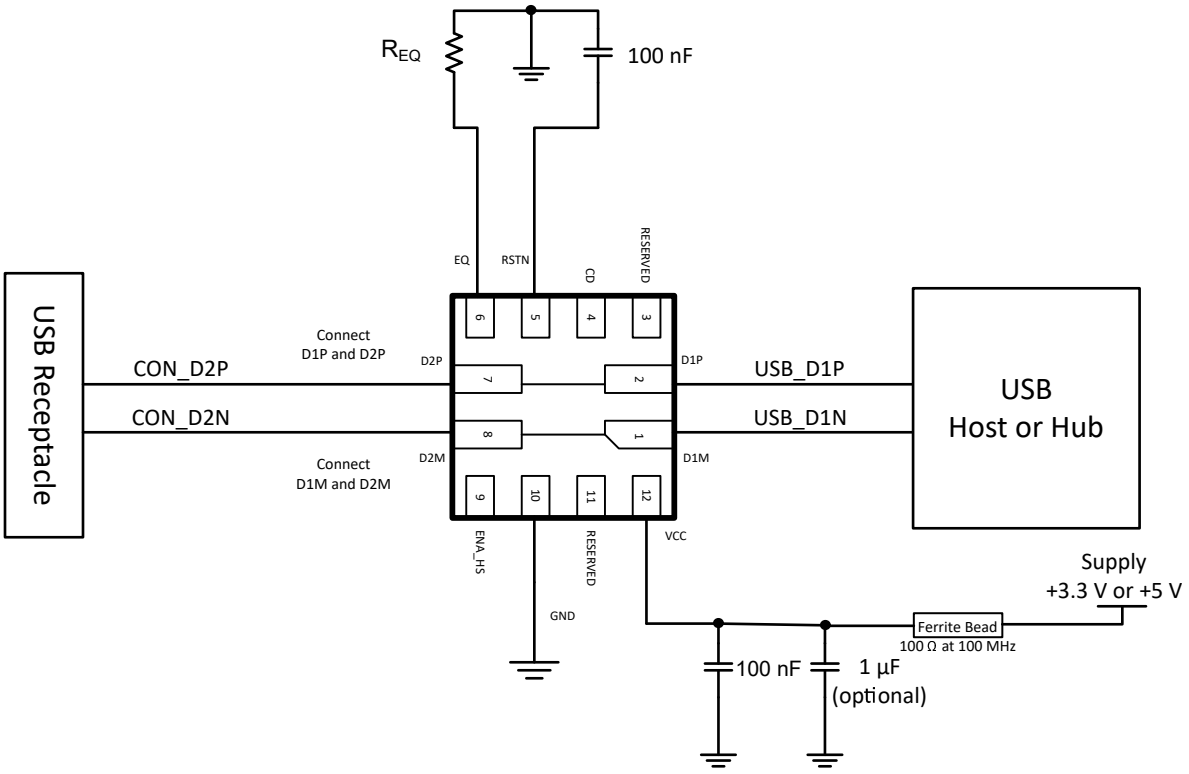

図 8-1. TUSB211A Reference Schematic

8.2.1 Design Requirements

TUSB211A requires a valid reset signal as described in the *Power Supply Recommendations* section. The capacitor at RSTN pin is not required if a micro controller drives the RSTN pin according to recommendations.

For this design example, use the parameters provided in 表 8-1.

表 8-1. Design Parameters for 3.3-V Supply With Low to Medium Loss System

PARAMETER			VALUE(1)
V_{CC}			3.3 V ±10%
I^2C support required in system (Yes/No)			No
Edge and DC Boost	R_{EQ}	EQ Level	EQ Level 0: R_{EQ} = 0-Ω
	0-Ω	0	
	1.8 kΩ ±1%	1	
	3.6 kΩ ±1%	2	
	Do Not Install (DNI)	3	

(1) These parameters are starting values for a low to medium loss system. Further tuning might be required based on specific host or device as well as cable length and loss profile. These settings are not specific to a 3.3-V supply system and could be applicable to 5-V supply system as well.

8.2.2 Detailed Design Procedure

The ideal EQ setting is dependent upon the signal chain loss characteristics of the target platform. The recommendation is to start with EQ Level 0, and then increment to EQ Level 1, and so on.

For the TUSB211A to recognize any change to the EQ setting, the RSTN pin must be toggled. This is because the EQ pin is latched on power up and the pin is ignored thereafter.

Placement of the device is also dependent on the application goal. 表 8-2 describes TI recommendations.

表 8-2. Platform Placement Guideline

PLATFORM GOAL	SUGGESTED TUSB211A PLACEMENT
Pass USB Near End Mask at the receptacle	Close to measurement point (connector)
Pass USB Far End Eye Mask at the plug	Close to USB PHY
Cascade multiple TUSB211As to improve device enumeration	Midway between each USB interconnect

表 8-3. Table of Recommended Settings

EQ settings(1) for channel loss	
Pre-channel cable length (Between USB PHY and TUSB211A)	**EQ**
0-3 meter	Level 0
2-5 meter	Level 1
Post-channel cable length (Between TUSB211A and inter-connect)	**EQ**
0-2 meter	Level 0
1-4 meter	Level 1

(1) These parameters are starting values for different cable lengths. Further tuning might be required based on specific host or device as well as cable length and loss profile.

8.2.2.1 Test Procedure to Construct USB High-Speed Eye Diagram

注

USB-IF certification tests for High-speed eye masks require the *mandated use* of the USB-IF developed test fixtures. These test fixtures do not require the use of oscilloscope probes. Instead they use SMA cables. More information can be found at the USB-IF Compliance Updates Page. It is located under the *Electrical Specifications* section, ID 86 dated March 2013.

The following procedure must be followed before using any oscilloscope compliance software to construct a USB High-speed Eye Mask:

8.2.2.1.1 For a Host Side Application

1. Configure the TUSB211A to the desired EQ setting.
2. Power on (or toggle the RSTN pin if already powered on) the TUSB211A.
3. Using SMA cables, connect the oscilloscope and the USB-IF host-side test fixture to the TUSB211A.
4. Enable the host to transmit USB TEST_PACKET.
5. Execute the oscilloscope USB compliance software.
6. Repeat the above steps to re-test TUSB211A with a different EQ setting (must reset to change).

8.2.2.1.2 For a Device Side Application

1. Configure the TUSB211A to the desired EQ setting.
2. Power on (or toggle the RSTN pin if already powered on) the TUSB211A.
3. Connect a USB host, the USB-IF device-side test fixture, and USB device to the TUSB211A. Ensure that the USB-IF device test fixture is configured to the ‘INIT’ position.
4. Allow the host to enumerate the device.
5. Enable the device to transmit USB TEST_PACKET.
6. Using SMA cables, connect the oscilloscope to the USB-IF device-side test fixture and ensure that the device-side test fixture is configured to the ‘TEST’ position.
7. Execute the oscilloscope USB compliance software.
8. Repeat the above steps to re-test TUSB211A with a different EQ setting (must reset to change).

8.3 Power Supply Recommendations

On power up, the interaction of the RSTN pin and power on ramp could result in digital circuits not being set correctly. The device should not be enabled until the power on ramp has settled to the minimum recommended supply voltage or higher for a correct power on reset of the digital circuitry. If RSTN cannot be held low by microcontroller or other circuitry until the power on ramp has settled, then an external capacitor from the RSTN pin to GND is required to hold the device in the low power reset state.

The RC time constant should be larger than five times of the power on ramp time (0 to V_{CC}). With a typical internal pullup resistance of 500 kΩ, the recommended minimum external capacitance is calculated as:

$$[Ramp\ Time\ \times\ 5]\ \div\ [500\ k\Omega] \quad (1)$$

8.4 Layout

8.4.1 Layout Guidelines

Although the land pattern has matched trace width to pad width, optimal impedance control is based on the user's own PCB stack-up. The recommendation is to maintain 90 Ω differential routing underneath the device.

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
