

## Read Me

This compressed file contains design information for the Texas Instruments AM572x GP EVM.

The relevant design files for each revision of the AM572x GP EVM have been placed in a separate directory. The directory name indicates the board revision.

As of this release, there have been three revisions of the AM572x GP EVM. The first was sold as TI part number "TMDXEVM5728". This part number was obsoleted in early 2016 and replaced with TI part number TMDSEVM572X". The following table provides a directory name cross reference for each revision.

In 2017, the 3MP image sensor used in Revision A1 of the Camera Module was obsoleted. It was necessary to redesign the Camera Module and the replacement used an automotive grade 1MP image sensor. During the transition period, it was decided to make the Camera Module an optional item.

Two design file directories have been associated with EVM Revision B. Design files located in directory "CM\_A1 LM\_A2a PM\_A3a" represents EVMs shipped with Revision A1 Camera Modules. If you received the Revision A1 Camera Module as part of an EVM or separate purchase, the design files can be found in this directory. Design files located in directory "CM\_C1 LM\_A2a PM\_A3a" represents EVMs shipped without Camera Modules. If you received the Revision C1 Camera Module, the design files can be found in this directory.

Revision	TI Part Number	Directory Name
-	TMDXEVM5728	CM_A1 LM_A2 PM_A2
A	TMDSEVM572X	CM_A1 LM_A2a PM_A3
B	TMDSEVM572X	CM_A1 LM_A2a PM_A3a
		CM_C1 LM_A2a PM_A3a
