

CC2755x10 SimpleLink Family of 2.4GHz High Performance Wireless MCUs

1 Features

Wireless MCU processing elements

- Arm® Cortex®-M33 processor (96MHz) with FPU (floating point unit), TrustZone®-M support, and CDE (custom datapath extension) for machine learning acceleration
- Algorithm Processing Unit (APU) (96MHz)
 - Mathematical accelerator for efficient vector and matrix operations
 - Bluetooth® Channel Sounding post-processing support for IFFT and advanced superresolution algorithms such as MUltiple SIgnal Classification (MUSIC)

Wireless MCU memory

- Up to 1MB of in-system programmable flash
- Up to 162KB of SRAM
- 32KB of System ROM with secure boot root of trust (RoT) and a serial (SPI/UART) bootloader
- Serial wire debug (SWD)

MCU peripherals

- 23 GPIOs, digital peripherals can be routed to multiple GPIOs:
 - Two SWD IO pads, multiplexed with GPIOs
 - Two LFXT IO pads, multiplexed with GPIOs
 - 19 DIOs (analog or digital IOs)
- All GPIOs with wakeup and interrupt capabilities
- 3×16 -bit and 1×32 -bit general-purpose timers, quadrature decode mode support
- Real-time clock (RTC)
- Watchdog timer
- System timer for radio, RTOS, and application operations for Bluetooth® channel sounding postprocessing
- 12-bit ADC, up to 1.2MSPS, eight external inputs
- Temperature sensor and battery monitor
- 1× low-power comparator
- 2× UART with LIN capability
- 2× SPI
- 1× I²C
- 1× I²S

Security enablers

- Hardware Security Module (HSM) with proprietary controller and dedicated memories supporting accelerated cryptographic operations and secure key storage:
 - AES (up to 256 bits) crypto accelerator
 - ECC (up to 521 bits), RSA (up to 3072 bits) public key accelerator
 - SHA-2 (up to 512 bits) accelerator

- True random number generator
- HSM firmware update support
- Differential power analysis (DPA) countermeasures for AES and ECC
- Separate AES 128-bit cryptographic accelerator (LAES) for latency-critical link-layer operations
- Secure boot and secure firmware updates
- Secure boot root of trust (RoT)
- Cortex®-M33 TrustZone-M, MPU, memory firewalls for software isolation
- Voltage glitch monitor (VGM)

Low-power consumption (VDDS at 3.3V)

- On-chip buck DC/DC converter
- RX current: 6.1mA
- TX current at 0dBm: 7.7mA
- TX current at +10dBm: 24.5mA (R variant)
- TX current at +20dBm: 143mA (P variant)
- Active mode MCU 96MHz (CoreMark®): 6.8mA
- Standby: 0.9µA (low power mode, RTC on, full SRAM retention)
- Shutdown: 160nA

Wireless protocol support

- Bluetooth® Core 6.0 Qualified
 - Support for Bluetooth® Channel Sounding (High Accuracy Distance Measurement)
- Matter
- Zigbee® 3.0 Certified
- Thread
- Proprietary systems
- Multi-protocol

High-performance radio

- 2.4GHz RF transceiver compatible with Bluetooth® Low Energy specification and IEEE 802.15.4 specification
- Output power up to +10dBm (R variant)
- Output power up to +20dBm (P variant)
- Integrated BALUN
- Integrated RF switch
- Receiver sensitivity:
 - Bluetooth® LE 125kbps: -103.5dBm
 - Bluetooth® LE 1Mbps: –97dBm
 - IEEE 802.15.4 (2.4GHz): -103dBm

Regulatory compliance

- Designed for systems targeting compliance with worldwide radio frequency regulations
 - EN 300 328 (Europe)
 - FCC CFR47 Part 15 (US)
 - ARIB STD-T66 (Japan)

Development tools and software

- LP-EM-CC2745R10-Q1 LaunchPad™ Development Kit
- SimpleLink™ Low Power F3 Software Development Kit (SDK)
 - Fully qualified Bluetooth® software protocol stack in the SDK
 - Up to 32 concurrent multirole connections
 - Bluetooth® Low Energy 6.0 Support
- Automotive SPICE (ASPICE) compliance for SDK components, including the Bluetooth[®] LE stack
- SysConfig system configuration tool
- SmartRF[™] Studio for simple radio configuration

Operating ranges

- Junction temperature T_J: –40°C to 125°C
- Wide supply voltage range 1.71V to 3.8V

Package

- 6mm × 6mm QFN40 with wettable flanks
- 3.5mm × 3.4mm WCSP (Preview)

2 Applications

- Medical
 - Home healthcare blood glucose monitors, blood pressure monitor, CPAP machine, electronic thermometer
 - Patient monitoring and diagnostics medical sensor patches
 - Personal care and fitness electric toothbrush, wearable fitness & activity monitor

Building automation

- Building security systems motion detector, electronic smart lock, door and window sensor, garage door system, gateway
- HVAC thermostat, wireless environmental sensor
- Fire safety system smoke and heat detector
- Video surveillance IP network camera
- Lighting
 - LED luminaire
 - Lighting control daylight sensor, lighting sensor, wireless control
- Factory automation and control
- Retail automation & payment electronic point of sale
 - Electronic shelf label
- · Grid infrastructure
 - Smart meters water meter, gas meter, electricity meter, and heat cost allocators
 - Grid communications wireless communications – Long-range sensor applications
 - Other alternative energy energy harvesting
- Communication equipment
 - Wired networking
 - wireless LAN or Wi-Fi access points, edge router, Core Router, Small Business Switch
- Personal electronics
 - Connected peripherals consumer wireless module, pointing devices, keyboards, and keypads
 - Gaming electronic and robotic toys
 - Wearables (non-medical) smart trackers, smart clothing

3 Description

The SimpleLink™ CC2755R and CC2755P family of devices are 2.4GHz wireless microcontrollers (MCUs), targeting Bluetooth® Low Energy (6.x and the upcoming versions), Zigbee (3.0 and the upcoming versions), Thread (1.3 and the upcoming versions), Matter (1.2 and the upcoming versions), and Proprietary 2.4GHz applications. These devices are optimized for low-power wireless communication with Over the Air Download (OAD) support in building automation (wireless sensors, lighting control, beacons), appliances, asset tracking, medical, and personal electronics (toys, HID, stylus pens) markets. Highlighted features of this device include:

- Support for features in Bluetooth® 6.0 and earlier versions:
 - LE Coded PHYs (Long Range), LE 2Mbit PHY (high speed), advertising extensions, multiple advertisement sets, CSA#2, as well as backward compatibility with earlier Bluetooth[®] Low Energy specifications
- Bluetooth® Channel Sounding technology support and an Algorithm Processing Unit (APU) to enable high accuracy, low cost, and a secure phase-based ranging mechanism for distance estimation

Submit Document Feedback

Copyright © 2025 Texas Instruments Incorporated

- www.ti.com
 - APU enables latency and power-efficient execution of distance-ranging signal processing algorithms, including FFT, super-resolution complex algorithms like MUltiple Signal Classification (MUSIC), and neural network algorithms.
- Arm®Custom Data Extension (CDE) instruction support for machine learning acceleration
- Fully qualified Bluetooth® software protocol stack included with the SimpleLink™ Low Power F3 Software Development Kit (SDK)
- Zigbee® protocol stack support in the SimpleLink™ Low Power F3 Software Development Kit (SDK)
- Thread protocol stack support in SIMPLELINK TI OPENTHREAD SDK
- Matter stack support in SIMPLELINK MATTER SDK
- Advanced security features for connected wireless MCUs:
 - An isolated HSM environment with a dedicated controller handling accelerated cryptographic and random number generation operations
 - Secure boot and firmware updates with the root of trust enabled by an immutable system ROM
 - Arm® Cortex M33 TrustZone-M based trusted execution environment support
 - Secure key storage support with HSM and TrustZone-M
 - Hardware fault sensors to mitigate low-cost, low-effort, non-invasive physical attack threats like voltage alitch injection
 - Dedicated AES-128 HW accelerator for handling timing-critical link-layer encryption/decryption operations
- Ultra-low standby current with full 162KB SRAM retention and RTC operation that enables significant battery life extension, especially for applications with longer sleep intervals
- Extended temperature support with the lowest standby current
- Integrated BALUN and integrated RF switch to support both transmit and receive operations on the same RF pin, even in the P version; thereby, enabling a reduced bill-of-material (BOM) board layout
- Excellent radio sensitivity and robustness (selectivity and blocking) performance for Bluetooth® Low Energy

The CC2755R and CC2755P devices are part of the SimpleLink™ MCU platform, which consists of Wi-Fi®, Bluetooth® Low Energy, Thread, Zigbee, Sub1GHz MCUs, and host MCUs that all share a common, easy-to-use development environment with a single core software development kit (SDK) and a rich toolset. A one-time integration of the SimpleLink™ platform enables you to add any combination of the portfolio's devices into your design, allowing 100 percent code reuse when your design requirements change. For more information, visit SimpleLink™ MCU platform.

6 Pin Configuration and Functions

6.1 Pin Diagrams

6.1.1 Pin Diagram—RHA package

Figure 6-1. RHA (6mm × 6mm) Pinout, 0.5mm Pitch (Top View)

The following I/O pins marked in Figure 6-1 in **bold** have high-drive capabilities:

- Pin 5, DIO2
- Pin 6, DIO3
- Pin 11, DIO9_SWDIO
- Pin 12, DIO10_SWDCK
- Pin 19, DIO17 A8
- Pin 20, DIO18_A7

The following I/O pins marked in Figure 6-1 in *italics* have analog capabilities:

- Pin 19, DIO17 A8
- Pin 20, DIO18 A7
- Pin 21, DIO19_A6
- Pin 22, DIO20_A5
- Pin 23, DIO21 A4
- Pin 24, DIO22_A3
- Pin 32, DIO27_A1
- Pin 33, DIO28 A0

The following I/O pins marked in Figure 6-1 in orange color are supplied by VDDIO:

- Pin 3, DIO0
- Pin 4, DIO1
- Pin 5, DIO2
- Pin 6, DIO3
- Pin 7, DIO4
- Pin 8, DIO5
- Pin 10, DIO7
- Pin 11, DIO9_SWDIO
- Pin 12, DIO10_SWDCK
- Pin 13, DIO11
- Pin 14, DIO12
- Pin 15, DIO15
- Pin 16, DIO16

The following I/O pins marked in Figure 6-1 in *blue color* are supplied by VDDS:

- Pin 19, DIO17 A8
- Pin 20, DIO18_A7
- Pin 21, DIO19 A6
- Pin 22, DIO20_A5
- Pin 23, DIO21_A4
- Pin 24, DIO22_A3
- Pin 26, DIO23 X32P
- Pin 27, DIO24_X32N
- Pin 32, DIO27_A1
- Pin 33, DIO28_A0

6.1.2 Pin Diagram—YCJ package

| X48N | 36 | _ | Analog | 48MHz crystal oscillator pin 2 | | | |
| NC | 37 | _ | _ | No Connect | | | |
| VDDS | 38 | _ | Power | 1.71V to 3.8V supply ⁽⁴⁾ | | | |
| ANT | 39 | _ | RF | 2.4GHz TX, RX | | | |
| NC | 40 | _ | _ | No Connect ⁽⁶⁾ | | | |
| EGP | _ | _ | GND | Ground – exposed ground pad ⁽⁵⁾ | | | |

- (1) Do not supply external circuitry from this pin.
- (2) VDDR pins 1, 2, and 34 must be tied together on the PCB.
- (3) Output from internal DC/DC and LDO is trimmed to 1.5V.
- (4) For more details, see the technical reference manual listed in Documentation Support.
- (5) EGP is the only ground connection for the device. A good electrical connection to the device ground on the printed circuit board (PCB) is imperative for proper device operation.
- (6) This pin is not connected to the die. In the LP-EM-CC2745R10-Q1 reference design, this pin is connected to ground to give better shielding on the antenna path.

| NAME | NO. | I/O | TYPE | DESCRIPTION | |
| VDDS | A3 | _ | Power | 1.71V to 3.63V supply | |
| DIO27_A1 | B2 | I/O | Digital or Analog | GPIO, analog capability | |
| DIO28_A0 | В3 | I/O | Digital or Analog | GPIO, analog capability | |
| VDDR | A2 | _ | Power | Internal supply, must be powered from the internal DC/DC converter or the internal LDO. Connect an external 10µF decoupling capacitor. ⁽¹⁾ (2) (3) | |
| X48P | A4 | _ | Analog | 48MHz crystal oscillator pin 1 | |
| X48N | A5 | _ | Analog | 48MHz crystal oscillator pin 2 | |
| VDDS | A6 | _ | Power | 1.71V to 3.63V supply | |
| ANT | A7 | I/O | RF | 2.4GHz TX, RX | |
| GND | E3 | _ | GND | Ground | |
| GND | E4 | _ | GND | Ground | |
| GND | E5 | _ | GND | Ground | |
| GND | E6 | _ | GND | Ground | |
| GND | D4 | _ | GND | Ground | |
| GND | D5 | _ | GND | Ground | |
| GND | D8 | _ | GND | Ground | |
| GND | C2 | _ | GND | Ground | |
| GND | C3 | _ | GND | Ground | |
| GND | C4 | _ | GND | Ground | |
| GND | C5 | _ | GND | Ground | |
| GND | C6 | _ | GND | Ground | |
| GND | C7 | _ | GND | Ground | |
| GND | B6 | _ | GND | Ground | |
| GND | B7 | _ | GND | Ground | |

- (1) VDDR pins must be tied together on the PCB.
- (2) Output from internal DC/DC and LDO is trimmed to 1.5V.
- (3) For more details, see the technical reference manual listed in *Documentation Support*.

6.3 Connections for Unused Pins and Modules

6.3.1 Connections for Unused Pins and Modules—RHA Package

Table 6-5. Connections for Unused Pins—RHA Package

| FUNCTION | SIGNAL NAME | PIN NUMBER | ACCEPTABLE PRACTICE(1) | PREFERRED PRACTICE ⁽¹⁾ |
|--------------------------------|-------------|--------------------|------------------------|--------------------------------------|
| GPIO (digital) | DIOn | 3–8 10 13–16 | NC, GND, or VDDS | NC |
| CMD | DIO9_SWDIO | 11 | NC, GND, or VDDS | NC ⁽³⁾ |
| SWD | DIO10_SWDCK | 12 | NC, GND, or VDDS | NC ⁽⁴⁾ |
| GPIO (digital or analog) | DIOn_Am | 19–24 32–33 | NC, GND, or VDDS | NC |
| 32.768kHz crystal | DIO23_X32P | 26 | NC or GND | NC |
| | DIO24_X32N | 27 | INC OF GND | INC |
| DC/DC convertor(2) | DCDC | 30 | NC | NC |
| DC/DC converter ⁽²⁾ | VDDS | 18, 29, 31, 38 | VDDS | VDDS |

Table 6-5. Connections for Unused Pins—RHA Package (continued)

| FUNCTION | SIGNAL NAME | PIN NUMBER | ACCEPTABLE PRACTICE ⁽¹⁾ | PREFERRED PRACTICE ⁽¹⁾ |
|-----------------------|-------------|------------|------------------------------------|--------------------------------------|
| Split Rail I/O supply | VDDIO | 9, 17 | VDDS | VDDS |

- (1) NC = No connect
- (2) When the DC/DC converter is not used, the inductor between DCDC and VDDR can be removed. VDDR must still be connected, and the 10μF decoupling capacitor must be kept on the VDDR net.
- (3) By default, an internal pullup is enabled on SWDIO.
- (4) By default, an internal pulldown is enabled on SWDCK.

6.3.2 Connections for Unused Pins and Modules—YCJ Package

Table 6-6. Connections for Unused Pins—RKP Package

| FUNCTION | SIGNAL NAME | PIN NUMBER | ACCEPTABLE PRACTICE(1) | PREFERRED PRACTICE ⁽¹⁾ |
|--------------------------------|-------------|---|------------------------|-----------------------------------|
| GPIO (digital) | DIOn | D7, D6, E8, E7,F6,F7,G8,H7,H6, G6,F5,F4,G4,G7,H8, G5,H5,D2 | NC, GND, or VDDS | NC |
| SWD | DIO9_SWDIO | H7 | NC, GND, or VDDS | GND or VDDS |
| | DIO10_SWDCK | H6 | NC, GND, or VDDS | GND or VDDS |
| GPIO (digital or analog) | DIOn_Am | G3,F3,H2,G2,F2,E2,B 2,B3,D3,B4,B5 | NC, GND, or VDDS | NC |
| 32.768-kHz crystal | DIO23_X32P | F1 | NC or GND NC | NC |
| 32.700-KHZ CIYSIAI | DIO24_X32N | E1 | INC OF GIND | NC |
| DC/DC converter ⁽²⁾ | DCDC_SW | B1 | NC | NC |
| | VDDS | H3,G1,C1,A1,A3,A6 | VDDS | VDDS |
| Split Rail I/O supply | VDDIO | F8,H4 | VDDS | VDDS |

⁽¹⁾ NC = No connect

6.4 Peripheral Pin Mapping

6.4.1 RHA Peripheral Pin Mapping

Table 6-7. RHA (QFN40) Peripheral Pin Mapping

7 Specifications

7.1 Absolute Maximum Ratings

Over operating free-air temperature range (unless otherwise noted)⁽¹⁾ (2)

| | | MIN | MAX | UNIT |
|---------------------|--|------|---------------------------------------|------|
| VDDS | Supply voltage | -0.3 | 4.1 | V |
| VDDIO | Split rail I/O supply voltage | -0.3 | 4.1 | V |
| V _{in_dio} | Voltage on any digital pin ⁽³⁾ (4) | -0.3 | VDDS + 0.3 or VDDIO + 0.3, max 4.1 | V |
| V _{in_x48} | Voltage on crystal oscillator pins X48P and X48N | -0.3 | 1.24 | V |
| V _{in_adc} | Voltage on ADC input | 0 | VDDS | V |
| V _{in_rf} | Input level, RF pins | | 10 | dBm |
| I _{in_dio} | Input clamp current on any DIO pin | | ±2 | mA |
| T _{stg} | Storage temperature | -55 | 150 | °C |

⁽¹⁾ Operation outside the Absolute Maximum Ratings may cause permanent device damage. Absolute Maximum Ratings do not imply functional operation of the device at these or any other conditions beyond those listed under Recommended Operating Conditions. If outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.

- (2) All voltage values are with respect to ground, unless otherwise noted.
- 3) Including analog capable DIOs
- (4) For list of digital IO pins that are powered by VDDS or VDDIO, refer to the Pin Configurations and Functions section in the data sheet.

7.2 ESD and MSL Ratings

| | | | | VALUE | UNIT | | | | | |
|------------------|-------------------------|---|----------|------------------|------|--|--|--|--|--|
| QFN packa | QFN packages | | | | | | | | | |
| V _{ESD} | Electrostatio discharge | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾ | All pins | ±1000 | V | | | | | |
| | Electrostatic discharge | Charged device model (CDM), per ANSI/ESDA/JEDEC JS-002 ⁽²⁾ | All pins | ±250 | V | | | | | |
| WCSP pag | ckages | | | | | | | | | |
| V _{ESD} | Electrostatic discharge | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾ | All pins | Update at RTM | V | | | | | |
| | Electrostatic discharge | Charged device model (CDM), per ANSI/ESDA/JEDEC JS-002 ⁽²⁾ | All pins | Update at RTM | V | | | | | |

- (1) JEDEC document JEP155 states that 500V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

Over operating free-air temperature range (unless otherwise noted)

| | MIN | MAX | UNIT |
|---|------|-----|-------|
| Operating ambient temperature ⁽¹⁾ (2) | -40 | 125 | °C |
| Operating junction temperature ^{(1) (2)} | -40 | 125 | °C |
| Operating supply voltage (VDDS) | 1.71 | 3.8 | V |
| Operating split rail IO supply voltage (VDDIO) | 1.71 | 3.8 | V |
| Rising supply voltage slew rate | 0 | 100 | mV/μs |
| Falling supply voltage slew rate ⁽³⁾ | 0 | 1 | mV/μs |

- (1) Operation at or near maximum operating temperature for extended durations will result in a reduction in lifetime.
- (2) For thermal resistance characteristics refer to Thermal Resistance Characteristics table in this document.
- (3) For small coin-cell batteries, with high worst-case end-of-life equivalent source resistance, a 10μF VDDS input capacitor must be used to enable compliance with this slew rate.

7.4 DC/DC

Measured on the LP-EM-CC2745R10-Q1 reference design with T_c = 25°C, V_{DDS} = 3.0V with DC/DC enabled (unless otherwise noted)

| PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|---|---|-----|-----|-----|------|
| VDDS supply voltage for DCDC operation ⁽¹⁾ | | 2.2 | 3.0 | 3.8 | V |
| Inductor at VDDR pin | Typical value of the component on PCB (2) | | 6.8 | | μH |
| Load capacitor at VDDR pin | Typical value of the component on PCB (2) | | 10 | | μF |

⁽¹⁾ When the supply voltage drops below the DCDC operation min voltage, the device smoothly transitions to use the on-chip GLDO regulator.

7.5 GLDO

Measured on the LP-EM-CC2745R10-Q1 reference design with T_c = 25°C, V_{DDS} = 3.0V

| PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|--|---|------|-----|-----|------|
| VDDS supply voltage for GLDO operation | | 1.71 | 3.0 | 3.8 | V |
| Load capacitor at VDDR pin | Typical value of the component on PCB (1) | | 10 | | μF |

⁽¹⁾ Capacitor tolerance of up to ±50% across temperature and overall part tolerance is considered.

7.6 Power Supply and Modules

Over operating free-air temperature range (unless otherwise noted)

| PARAMETER | TEST CONDITIONS | MIN TYP MAX | UNIT | | | | | |
|---|------------------------------------|-------------|------|--|--|--|--|--|
| VDDS BOD (brown-out detector) | | | | | | | | |
| Untrimmed brownout rising threshold | Before initial boot ⁽¹⁾ | 1.62 | V | | | | | |
| Trimmed brownout rising threshold (1) | | 1.68 | V | | | | | |
| Trimmed brownout falling threshold ⁽¹⁾ | | 1.67 | V | | | | | |
| VDDS POR (power-on-reset) | , | 1 | • | | | | | |
| POR power-up level | | 1.5 | V | | | | | |
| POR power-down level | | 1.45 | V | | | | | |

⁽¹⁾ The brown-out detector is trimmed at initial boot. The value is kept until device is reset by a POR reset or the RSTN pin.

7.7 Battery Monitor

Measured on the LP-EM-CC2745R10-Q1 reference design with T_c = 25°C, unless otherwise noted.

| PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|------------|-----------------|------|-----|-----|------|
| Resolution | | | 22 | | mV |
| Range | | 1.71 | | 3.8 | V |
| Accuracy | VDDS = 3.0V | | 30 | | mV |

7.8 BATMON Temperature Sensor

Measured on the LP-EM-CC2745R10-Q1 reference design with V_{DDS} = 3.0V (unless otherwise noted)

| PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|------------|-----------------------|-----|------|-----|------|
| Resolution | T _c = 25°C | | 1.7 | | °C |
| Accuracy | -40°C to 0°C | | ±4.0 | | °C |
| Accuracy | 0°C to 125°C | | ±2.5 | | °C |

Product Folder Links: CC2755R10 CC2755P10

⁽²⁾ The capacitor and inductor tolerances of up to ±50% across temperature and overall part tolerance are considered.

7.9 Power Consumption—Power Modes

Measured on the LP-EM-CC2745R10-Q1 reference design T_c = 25°C, V_{DDS} = 3.0V, DC/DC enabled (unless otherwise noted)

| - 1 | PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |

- Ipeak refers to the programmable DCDC peak current setting used to vary the maximum DCDC load support. (1)
- (2)
- Only one LGPT timer instance enabled Only one SPI peripheral instance enabled (3)
- Only one UART peripheral instance enabled

7.10 Power Consumption—Radio Modes (R variant)

Measured on the LP-EM-CC2745R10-Q1 reference design with T_c = 25°C, V_{DDS} = 3.0V with DC/DC enabled (unless otherwise noted)

| | PARAMETER | TEST CONDITIONS | MIN TYP | MAX | UNIT |
|-----------------|------------------------|---|---------|-----|------|
| I _{RX} | Radio receive current | 2440MHz, 1Mbps, system bus off ⁽¹⁾ | 6.7 | | mA |
| I _{RX} | Radio receive current | 2440MHz, 1Mbps, V _{DDS} = 3.3V, system bus off ⁽¹⁾ | 6.1 | | mA |
| I _{RX} | Radio receive current | 2440MHz, 1Mbps, DC/DC disabled, system bus off (1) | 11.7 | | mA |
| I _{TX} | Radio transmit current | -8dBm output power setting 2440MHz, system bus off ⁽¹⁾ | 5.7 | | mA |
| I _{TX} | Radio transmit current | -8dBm output power setting 2440MHz, V _{DDS} = 3.3V, system bus off ⁽¹⁾ | 5.3 | | mA |
| I _{TX} | Radio transmit current | 0dBm output power setting 2440MHz, system bus off ⁽¹⁾ | 8.4 | | mA |
| I _{TX} | Radio transmit current | 0dBm output power setting 2440MHz, V _{DDS} = 3.3V, system bus off ⁽¹⁾ | 7.7 | | mA |
| I _{TX} | Radio transmit current | 0dBm output power setting 2440MHz DC/DC disabled, system bus off ⁽¹⁾ | 14.7 | | mA |
| I _{TX} | Radio transmit current | +4dBm output power setting 2440MHz, system bus off ⁽¹⁾ | 10.6 | | mA |
| I _{TX} | Radio transmit current | +4dBm output power setting 2440MHz, V _{DDS} = 3.3V, system bus off ⁽¹⁾ | 9.7 | | mA |
| I _{TX} | Radio transmit current | +6dBm output power setting 2440MHz, system bus off ⁽¹⁾ | 19.4 | | mA |
| I _{TX} | Radio transmit current | +6dBm output power setting 2440MHz, V _{DDS} = 3.3V, system bus off ⁽¹⁾ | 17.7 | | mA |
| I _{TX} | Radio transmit current | +8dBm output power setting 2440MHz, system bus off ⁽¹⁾ | 22.3 | | mA |
| I _{TX} | Radio transmit current | +8dBm output power setting 2440MHz, V _{DDS} = 3.3V, system bus off ⁽¹⁾ | 20.3 | | mA |
| I _{TX} | Radio transmit current | +8dBm output power setting 2440MHz DC/DC disabled | 38.6 | | mA |
| I _{TX} | Radio transmit current | +10dBm output power setting 2440MHz, system bus off ⁽¹⁾ | 27.1 | | mA |
| I _{TX} | Radio transmit current | +10dBm output power setting 2440MHz, V _{DDS} = 3.3V, system bus off ⁽¹⁾ | 24.5 | | mA |
| I _{TX} | Radio transmit current | +10dBm output power setting 2440MHz DC/DC disabled, system bus off ⁽¹⁾ | 46.5 | | mA |

⁽¹⁾ System bus off refers to device idle mode, DMA disabled and flash disabled.

7.11 Power Consumption–Radio Modes (P variant)

Measured on the LP-EM-CC2755P10 (P variant) reference design with T_c = 25°C, V_{DDS} = 3.0V with DC/DC enabled (unless otherwise noted)

| | PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|-----------------|------------------------|--|-----|------|-----|------|
| I _{RX} | Radio receive current | 2440MHz, 1Mbps, system bus off ⁽¹⁾ | | 6.8 | | mA |
| I _{RX} | Radio receive current | 2440MHz, 1Mbps, V _{DDS} = 3.3V, system bus off ⁽¹⁾ | | 6.2 | | mA |
| I _{RX} | Radio receive current | 2440MHz, 1Mbps, DC/DC disabled, system bus off ⁽¹⁾ | | 11.7 | | mA |
| I _{TX} | Radio transmit current | -8dBm output power setting 2440MHz, system bus off ⁽¹⁾ | | 6.2 | | mA |
| I _{TX} | Radio transmit current | -8dBm output power setting 2440MHz, V _{DDS} = 3.3V, system bus off ⁽¹⁾ | | 5.8 | | mA |
| I _{TX} | Radio transmit current | 0dBm output power setting 2440MHz, system bus off ⁽¹⁾ | | 9.3 | | mA |
| I _{TX} | Radio transmit current | 0dBm output power setting 2440MHz, V _{DDS} = 3.3V, system bus off ⁽¹⁾ | | 8.6 | | mA |

| I _{TX} | Radio transmit current | +20 dBm output power setting 2440 MHz DC/DC disabled, V _{DDS} = 3.3 V, system bus off ⁽¹⁾ | 143 | | mA |

⁽¹⁾ System bus off refers to device idle mode, DMA disabled and flash disabled.

7.12 Nonvolatile (Flash) Memory Characteristics

Over operating free-air temperature range and V_{DDS} = 3.0V (unless otherwise noted)

| PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|-------------------|-----------------|-----|-----|-----|------|
| Flash sector size | | | 2 | | KB |

7.12 Nonvolatile (Flash) Memory Characteristics (continued)

Over operating free-air temperature range and V_{DDS} = 3.0V (unless otherwise noted)

| PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|---|---|------|-----|-----|---------------------|
| Supported flash erase cycles before failure, full bank ⁽¹⁾ (2) | | 30 | | | k Cycles |
| Supported flash erase cycles before failure, single sector ⁽³⁾ | | 60 | | | k Cycles |
| Maximum number of write operations per row before sector erase ⁽⁴⁾ | | | | 83 | Write Operations |
| Flash retention | 105°C | 11.4 | | | Years |
| Flash retention | 125°C | 10 | | | Years |
| Flash sector erase current (5) | | | 5.8 | | mA |
| Flash sector erase time ⁽⁶⁾ | 0 erase cycles | | 2.2 | | ms |
| Flash write current (5) | full sector at a time | | 6.6 | | mA |
| Flash write time ⁽⁶⁾ | full sector (2KB) at a time, 0 erase cycles | | 8 | | ms |

- (1) A full bank erase is counted as a single erase cycle on each sector.
- (2) Aborting flash during erase or program modes is not a safe operation.
- (3) Up to 16 customer-designated sectors can be individually erased an additional 30k times beyond the baseline bank limitation of 30k cycles.
- (4) Each wordline is 2048 bits (or 256 bytes) wide. This limitation corresponds to sequential memory writes of 4 (3.1) bytes minimum per write over a whole wordline. If additional writes to the same wordline are required, a sector erase is required once the maximum number of write operations per row is reached.
- (5) Current consumption when device is performing erase or write operations to a flash sector. DC/DC enabled (ipeak = 0). All peripherals are disabled.
- (6) This number is dependent on flash aging and increases over time and erase cycles.

7.13 Thermal Resistance Characteristics

| | | PACKAGE | | | |
|------------------------|--|---------------|---------|---------------------|--|
| THERMAL METRIC | THERMAL METRIC | RKP (VQFN) | WCSP | UNIT ⁽¹⁾ | |
| | | 40 PINS | 62 PINS | | |
| R _{θJA} | Junction-to-ambient thermal resistance | 26.4 | TBD | °C/W | |
| R ₀ JC(top) | Junction-to-case (top) thermal resistance | 14.7 | TBD | °C/W | |
| R _{θJB} | Junction-to-board thermal resistance | 8.1 | TBD | °C/W | |
| ΨЈТ | Junction-to-top characterization parameter | 0.2 | TBD | °C/W | |
| ΨЈВ | Junction-to-board characterization parameter | 8.1 | TBD | °C/W | |
| R _{0JC(bot)} | Junction-to-case (bottom) thermal resistance | 1.6 | TBD | °C/W | |

^{(1) °}C/W = degrees Celsius per watt

7.14 RF Frequency Bands

Over operating free-air temperature range (unless otherwise noted).

| PARAMETER | MIN | TYP MAX | UNIT |
|-----------------|------|---------|------|

7.15 Bluetooth Low Energy—Receive (RX) (continued)

Measured on the LP-EM-CC2745R10-Q1 reference design with $T_c = 25^{\circ}$ C, $V_{DDS} = 3.0$ V, $f_{RF} = 2440$ MHz with DC/DC enabled unless otherwise noted. All measurements are performed at the antenna input with a combined RX and TX path. All measurements are performed conducted.

| PARAMETER | TEST CONDITIONS | MIN TYP | MAX | UNIT |
|---|---|------------------------|-----|------|
| Selectivity, ±6MHz ⁽²⁾ | Wanted signal at –67dBm, modulated interferer at ±6MHz, BER = 10^{-3} | 40 / 36 ⁽³⁾ | | dB |
| Selectivity, image frequency ⁽²⁾ | Wanted signal at –67dBm, modulated interferer at image frequency, BER = 10 ⁻³ | 6 | | dB |
| Selectivity, image frequency ±2MHz ⁽²⁾ | Note that Image frequency + 2MHz is the Co-channel. Wanted signal at –67dBm, modulated interferer at ±2MHz from image frequency, BER = 10 ⁻³ | -7 / 29 ⁽³⁾ | | dB |
| Out-of-band blocking ⁽⁴⁾ | 30MHz to 2000MHz | -10 | | dBm |
| Out-of-band blocking | 2003MHz to 2399MHz | -10 | | dBm |
| Out-of-band blocking | 2484MHz to 2997MHz | -10 | | dBm |
| Out-of-band blocking | 3000MHz to 12.75GHz (excluding VCO frequency) | -2 | | dBm |
| Intermodulation | Wanted signal at 2402MHz, –64dBm. Two interferers at 2408 and 2414MHz respectively, at the given power level | -38 | | dBm |

- (1) Actual performance exceeding Bluetooth specification listed here
- (2) Numbers given as I/C dB
- (3) X / Y, where X is +N MHz and Y is -N MHz
 (4) Excluding one exception at F_{wanted} / 2, per Bluetooth Specification
- (5) Suitable for systems targeting compliance with worldwide radio-frequency regulations ETSI EN 300 328 and EN 300 440 Class 2 (Europe), FCC CFR47 Part 15 (US), and ARIB STD-T66 (Japan)
- The device will saturate at -30dBm.

7.16 Bluetooth Low Energy—Transmit (TX)

Measured on the LP-EM-CC2745R10-Q1 (R variant) reference design with T_c = 25°C, V_{DDS} = 3.0V, f_{RF} = 2440MHz with DC/DC enabled unless otherwise noted. All measurements are performed at the antenna input with a combined RX and TX path. All measurements are performed conducted.

| VARIANT | PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT | |
|--------------------|---------------------------------|--|-----|-----|-----|------|--|
| General Parameters | | | | | | | |
| R variant | Max output power | Delivered to a single-ended 50Ω load through integrated balun | | 10 | | dBm | |
| | Output power programmable range | Delivered to a single-ended 50Ω load through integrated balun | | 30 | | dB | |
| | Max output power | Delivered to a single-ended 50Ω load through integrated balun | | 20 | | dBm | |
| P variant | Output power programmable range | Delivered to a single-ended 50Ω load through integrated balun | | 40 | | dB | |

7.17 Bluetooth Channel Sounding

Measured on the LP-EM-CC2745R10-Q1 reference design with $T_c = 25^{\circ}C$, $V_{DDS} = 3.3V$, $f_{RF} = 2440MHz$, Tx output power = +10dBm with DC/DC enabled (unless otherwise noted)

| | PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |

| | Harmonics (1) | Second harmonic | | < -42 | - (| dBm |
| | | Third harmonic | | < -42 | - (| dBm |
| | | f < 1 GHz, outside restricted bands | | < -36 | - | dBm |
| | | f < 1GHz, restricted bands ETSI, MIIT | | < -54 | | dBm |
| | Spurious | f < 1 GHz, restricted bands FCC | | < -55 | - (| dBm |
| | emissions ⁽¹⁾ (2) (3) (4) | f > 1GHz, including harmonics (ETSI) | | < -30 | - (| dBm |
| P Variant | | f > 1GHz (2300 - 2390 MHz, 2483.5 - 2500 MHz) (MIIT) | +20 dBm setting | <-40 | - | dBm |
| | | f > 1GHz (2390 - 2400 MHz) (MIIT) | | < -30 | - | dBm |
| | Harmonics ⁽¹⁾ | Second harmonic | | < -42 | - (| dBm |
| | i iaimonics. | Third harmonic | | < -42 | - (| dBm |

⁽¹⁾ Suitable for systems targeting compliance with worldwide radio-frequency regulations ETSI EN 300 328 and EN 300 440 Class 2 (Europe), FCC CFR47 Part 15 (US), MIIT (China), and ARIB STD-T66 (Japan).

Product Folder Links: CC2755R10 CC2755P10

⁽²⁾ To enable margins for passing FCC band edge requirements at 2483.5MHz, a lower than maximum output-power setting or less than 100% duty cycle may be used when operating at the upper 802.15.4 channel(s).

⁽³⁾ To enable margin for passing MIIT band edge requirements at 2400 MHz and 2483.5 MHz, a lower than maximum output-power setting may be used when operating at the lower and upper BLE channels

⁽⁴⁾ To enable margin for passing ETSI band edge requirements at 2400 MHz, a lower than maximum output-power setting may be used when operating at the lower BLE channel

7.21 Timing and Switching Characteristics

7.21.1 Reset Timing

| PARAMETER | MIN | TYP | MAX | UNIT |
|-------------------|-----|-----|-----|------|
| RSTN low duration | 1 | | | μs |

7.21.2 Wakeup Timing

Measured over operating free-air temperature with V_{DDS} = 3.0V (unless otherwise noted). The times listed here do not include any software overhead (unless otherwise noted).

| | PARAMETER | TEST CONDITIONS | MIN TY | P MAX | UNIT |
|---------------------------|---|---|--------|-------|------|
| MCU, Reset/Shuto | down to Active ⁽¹⁾ | GLDO default charge current setting, VDDR capacitor fully charged ⁽²⁾ | 350–45 | 0 | μs |
| MCU, Standby to Active | MCU, Standby to Active ⁽³⁾ (ready to execute code from flash), VGM disabled coming out of standby mode | DC/DC enabled, default recharge current configuration | 4 | 3 | μs |
| MCU, Standby to Active | MCU, Standby to Active ⁽³⁾ (ready to execute code from flash), VGM disabled coming out of standby mode | GLDO enabled, default recharge current configuration | 4 | 3 | μs |
| MCU, Standby to Active | MCU, Standby to Active (ready to execute code from flash), VGM enabled coming out of standby mode | DC/DC enabled, default recharge current configuration | 8 | 0 | μs |
| MCU, Standby to Active | MCU, Standby to Active (ready to execute code from flash), VGM enabled coming out of standby mode | GLDO enabled, default recharge current configuration | 8 | 0 | μs |
| MCU, Idle to Activ | | Flash enabled in idle mode | | 3 | μs |
| ivico, idie to Activ | 5 | Flash disabled in idle mode | 1 | 5 | μs |

⁽¹⁾ Wakeup time includes system ROM bootcode execution time (excluding any system ROM secure boot operations). The wakeup time is dependent on the remaining charge on VDDR capacitor when starting the device, and thus how long the device has been in Reset or Shutdown before starting up again.

(3) Dependent on VDDR capacitor voltage level

⁽²⁾ This is the best case Reset/Shutdown mode to Active mode time including system ROM bootcode operation (excluding any system ROM secure boot operations) for the specified GLDO charge current setting considering the VDDR capacitor is fully charged and is not discharged during the reset and shutdown events; that is, when the device is in reset / shutdown modes for only a very short period of time

7.21.3 Clock Specifications

7.21.3.1 48MHz Crystal Oscillator (HFXT)

Measured on the LP-EM-CC2745R10-Q1 reference design with T_c = 25°C, V_{DDS} = 3.0V, unless otherwise noted.

| | PARAMETER | MIN | TYP | MAX | UNIT |
|------------------------------|--|-----|------------------|-----|------|
| | Crystal frequency | | 48 | | MHz |
| ESR | Equivalent series resistance 6 pF < C _L ≤ 9 pF | | 20 | 60 | Ω |
| ESK | Equivalent series resistance $5 \text{ pF} \leq C_L \leq 6 \text{ pF}$ | | | 80 | Ω |
| C _L | Crystal load capacitance ⁽¹⁾ | 5 | 7 ⁽²⁾ | 9 | pF |
| Start-up time ⁽³⁾ | Until clock is qualified. | | 130 | | μs |

- (1) Adjustable load capacitance is integrated into the device. External load capacitors are required for systems targeting compliance with certain regulations.
- (2) On-chip default connected capacitance including reference design parasitic capacitance. Connected internal capacitance is changed through software in the Customer Configuration section (CCFG).
- (3) Start-up time using the TI-provided power driver. Start-up time may increase if the driver is not used.

7.21.3.2 96MHz RC Oscillator (HFOSC)

Measured on the LP-EM-CC2745R10-Q1 reference design with T_c = 25°C, V_{DDS} = 3.0V, unless otherwise noted.

| | | MIN | TYP | MAX | UNIT |
|---------------------------------|---|-----|-----|-----|------|
| Center Frequency | | | 96 | | MHz |
| Uncalibrated frequency accuracy | Frequency accuracy until HFXT tracking loop is enabled. | | ±3 | | % |

7.21.3.3 80/90/98MHz RC Oscillator (AFOSC)

Measured on the LP-EM-CC2745R10-Q1 reference design with T_c = 25°C, V_{DDS} = 3.0V, unless otherwise noted.

| | MIN | TYP | MAX | UNIT |
|------------------|-----|-------------------------|-----|------|
| Center Frequency | | 80 90.3168 98.304 | | MHz |

7.21.3.4 32kHz Crystal Oscillator (LFXT)

Measured on the LP-EM-CC2745R10-Q1 reference design with T_c = 25°C, V_{DDS} = 3.0V, unless otherwise noted.

| | MIN | TYP | MAX | UNIT |
|------------------------------------|-----|--------|-----|------|
| Crystal frequency | | 32.768 | | kHz |
| Supported crystal load capacitance | 6 | | 12 | pF |
| ESR (Equivalent Series Resistance) | | 30 | 100 | kΩ |

7.21.3.5 32kHz RC Oscillator (LFOSC)

Measured on the LP-EM-CC2745R10-Q1 reference design with T_c = 25°C, V_{DDS} = 3.0V, unless otherwise noted.

| | | MIN | TYP MAX | UNIT |
|----------------------|--|-----------------------|---------------------|------|
| Calibrated frequency | | 32.768 ⁽¹⁾ | | kHz |
| Clock accuracy | Sleep clock accuracy when using LFOSC ⁽²⁾ | | ±500 ⁽³⁾ | ppm |

- (1) When using LFOSC as a source for the low-frequency system clock (LFCLK), the accuracy of the LFCLK-derived Real Time Clock (RTC) can be improved by measuring LFOSC relative to HFXT and compensating for the RTC tick speed. This functionality is available through the TI-provided Power driver.
- (2) Suitable for crystal-less operation of both Bluetooth LE peripheral and central roles with periodic RTC calibration using device HW and SW that is configured through the TI SysConfig tool. For further guidance, please reach out to Texas Instruments for support.
- (3) The actual value is lower than ±500ppm prescribed by Bluetooth LE sleep clock accuracy specification.

Figure 7-9. RX Current vs Supply Voltage (VDDS) (BLE 1Mbps, 2.44GHz)

7.23.3 TX Current

Note

The DCDC load support increases with VDDS supply voltage up to a specific supply threshold. Beyond this threshold the load support typically drops before increasing again until the next threshold. For high TX output power settings, the load on VDDR can exceed the DCDC load support and the extra load is supplied by internal GLDO. This manifests as multiple slight peaks on the TX current curve as a function of increasing VDDS supply voltage.

Table 7-1 shows typical TX current and output power for different output power settings.

8 Detailed Description

8.1 Overview

Section 4 shows the core modules of the CC2755 devices.

8.2 System CPU

The CC27xx SimpleLink™ Wireless MCU contains an Arm® Cortex®-M33 system CPU, which runs the application, the protocol stacks, and the radio. The Cortex-M33 processor achieves an optimal blend of real-time determinism, energy efficiency, software productivity, and system security. The 32-bit processor core is built with the mainline extension Armv8-M architecture designed for low-latency processing. The Cortex-M33 processor offers multiple benefits to developers, including:

- Real-time deterministic, high-performance interrupt handling with 32-bit performance
- Security foundation with the addition of TrustZone-M technology
- Low-power processing with ease of software development

The Cortex-M33 processor offers multiple benefits to developers, making it ideal for automotive, IoT, and embedded applications that require efficient security or digital signal control. Some of the features include:

- Armv8-M architecture with mainline extension
- Thumb/Thumb-2 subset instruction support
- 3-stage pipeline
- · Software security:
 - TrustZone-M for Armv8-M, with Security Attribution Unit (SAU) of up to eight regions
 - Stack limit boundaries and checking
- DSP extension: including all the V8.1-M DSP/SIMD instructions
- Floating Point Unit (FPU): single precision floating point unit, IEEE 754 compliant
- Memory Protection Unit (MPU) with eight regions for the secure state (MPU_S) and eight regions for the non-secure state (MPU_NS)
- 24-bit SysTick timer for each security domain
- Integrated Nested Vectored Interrupt Controller (NVIC) supporting Non-Maskable Interrupt (NMI)
- · Low-power sleep modes
 - Arm® SLEEP maps to the device's idle power mode
 - Arm® DEEPSLEEP maps to the device's standby power mode
- Serial Wire Debug ports with up to eight breakpoints and four watchpoints
- Data Watchpoint and Trace (DWT), and Instrumentation Trace Macrocell (ITM)
- 96MHz operation on CC27xx with 1.41DMIPS/MHz and 3.85 CoreMark®) / MHz (running CoreMark®) from flash) performance
- Arm® CDE (Custom Data Extension) instruction support for machine learning acceleration

Additionally, the CC27xx devices are compatible with all Arm® tools and software.

8.3 Radio (RF Core)

The low-power RF Core (LRF) implements a high-performance and highly flexible RF subsystem containing RF and baseband circuitry in addition to a software-defined digital radio (LRFD). LRFD provides a high-level, command-based API to the main CPU and handles all of the timing-critical and low-level details of many different radio PHYs. Several signals are also available to control external circuitry, such as RF switches or range extenders, autonomously.

The modem is highly configurable and has the flexibility to support future standards. It is not programmable by customers but is instead loaded with precompiled images provided in the radio driver in the SimpleLink™ Low Power F3 software development kit (SDK). This mechanism allows the radio platform to be updated for support of future versions of standards with over-the-air (OTA) updates while still using the same silicon. LRFD stores the code images in the RF SRAM and does not make use of any ROM memory; thus, image loading from flash only occurs once after boot, and no patching is required when exiting power modes.

8.3.1 Bluetooth® Low Energy

The RF Core offers full support for Bluetooth® Low Energy, including the high-speed 2Mbps physical layer and the 500kbps and 125kbps long-range PHYs (Coded PHY) through the TI-provided Bluetooth® stack or through a standardized host controller interface.

The RF Core and the TI-provided Bluetooth® stack support the Bluetooth® 6 Channel Sounding feature to enable a new high-accuracy and low-cost distance measurement method between two Bluetooth® LE devices.

8.3.2 802.15.4 (Thread, Zigbee, Matter)

Through a dedicated IEEE radio API, the RF Core supports the 2.4GHz IEEE 802.15.4-2011 physical layer (2 Mchips per second Offset-QPSK with DSSS 1:8), used in Thread and Zigbee protocols. TI also provides royalty-free protocol stacks for Thread and Zigbee, enabling a robust end-to-end solution.

8.4 Memory

The CC27xx devices support up to 1MB of nonvolatile (Flash) memory to provide storage for code and data. The flash memory is in-system programmable and erasable. Dual flash banks (up to 512kB each) are supported to enable reading/execution from one flash bank when erasing/writing to the other flash bank. Special flash memory sectors contain Customer Configuration (CCFG) and Security Configuration (SCFG) sections that are used by system ROM bootcode and TI-provided drivers to configure the device. The CCFG and SCFG configurations are generated using the device configuration Sysconfig tool.

Up to 162KB of ultra-low leakage system static RAM (SRAM) can be used for both storage of data and execution of code. Retention of SRAM contents in Standby power mode is enabled by default and included in Standby mode power consumption numbers. Parity checking for detecting bit errors in memory is an optional feature that is built-in to reduce chip-level soft errors and increase reliability. With the SRAM parity enabled, the SRAM size is limited to 144KB.

Upon regular device boot, the user application can use hardware mechanisms for SRAM clearing. To improve code execution speed and reduce power consumption when executing code from nonvolatile memory, a 4-way set-associative 8KB cache is enabled by default to cache and prefetch instructions read by the system CPU.

The system ROM includes device bootcode firmware that is the first piece of code that executes upon device power-up or reset. The system ROM handles the execution of device start-up routines, initial device trimming, and device security features, including secure boot operations and device lifecycle management. The system ROM also contains a serial (SPI and UART) bootloader that can be used for the initial programming of the device. The system ROM firmware includes open-source MCUBoot software that is licensed under APACHE-2.0. See the corresponding license terms and notice information in Software License and Notice section. Some system ROM firmware is licensed under the BSD-3-clause license.

8.5 Hardware Security Module (HSM)

The CC27xx devices have an integrated hardware security module (HSM) supporting an isolated environment for cryptographic, key management, secure counters, and random number generation operations. Selected algorithms are protected from differential power analysis (DPA) side channel attacks. Together with a large selection of open-source cryptography libraries provided with the Software Development Kit (SDK), the system enables secure and future-proof automotive and IoT applications to be easily built on the platform.

The following cryptographic functions using energy-efficient accelerators and RNG functions are accelerated by the HSM:

- Key Agreement Schemes
 - Elliptic Curve Diffie-Hellman with static or ephemeral keys (ECDH and ECDHE)
 - Diffie Hellman with static or ephemeral keys (DH and DHE)
- Signature Processing
 - Elliptic Curve Diffie-Hellman Digital Signature Algorithm (ECDSA)
 - Edwards-Curve Digital Signature Algorithm (EdDSA)
 - RSA PKCS #1 v1.5
 - RSA PSS
- Message Authentication Codes
 - AES CBC-MAC
 - AES CMAC
 - HMAC with SHA2-224, SHA2-256, SHA2-384, and SHA2-512
- **Block Cipher Modes of Operation**
 - AES CCM and AES CCM* (CCM-Star)
 - AES GCM
 - AES ECB
 - AES CBC
 - AES CTR
- Hash Algorithms
 - SHA2-224
 - SHA2-256
 - SHA2-384
 - SHA2-512
- **Random Number Generation**
 - TRNG (True Random Number Generator)
 - AES-CTR DRBG (Deterministic Random Bit Generator)

Cryptographic key sizes and types include:

- Advanced Encryption Standard (AES) key sizes of 128, 192, and 256 bits
- RSA key sizes up to 3072 bits (Sign and Verify supported), and up to 4096 bits (verify only)
- Diffie-Hellman key sizes of 2048 bits and 3072 bits
- Elliptic Curve Support
 - Short Weierstrass
 - NIST-P224 (secp224r1), NIST-P256 (secp256r1), NIST-P384 (secp384r1), NIST-P521 (secp521r1)
 - Brainpool-256R1, Brainpool-384R1, Brainpool-512R1
 - Montgomery
 - Curve25519
 - Twisted Edwards form
 - Ed25519

DPA countermeasures are implemented for:

- **AES** operations
- **ECDSA** operations

Submit Document Feedback

The HSM executes the HSM firmware from a secured flash region. 96KB of the device flash memory is reserved for the HSM firmware. The HSM firmware is verified by the HSM ROM during the HSM boot process. Secure firmware update of the HSM firmware image on-chip is handled by the system ROM bootcode and the HSM ROM.

The HSM also has a data RAM region that is not accessible to the rest of the system (system CPU, DMA, debug access, and so on). The data RAM region is retained in low-power modes, supporting quick power-up of the HSM and retention of key material. In addition to the storage of key material in data RAM, the HSM supports importing and exporting wrapped key material (NIST SP800-38F) with a key unique to the device, known as a HW Unique Key (HUK). This allows keys to be securely stored anywhere in the system's nonvolatile (Flash) memory.

The HSM is accessible to the application running on the system CPU in a controlled manner via the HSM mailbox interface. The HSM is a bus controller in the device and can access the system memory directly, enabling better efficiency for moving data during cryptographic operations.

The SimpleLink Low Power F3 software development kit (SDK) includes the encrypted and authenticated HSM firmware needed to be programmed on-chip for the HSM operation and drivers for all HSM functions.

8.6 Cryptography

The CC27xx devices also integrate LAES, an AES-128 cryptography hardware accelerator (outside the HSM), to support latency-critical link-layer encryption/decryption operations prescribed by the wireless protocols. It also has the benefit of being lower power and improves the availability and responsiveness of the system because the cryptography operations run in a background hardware thread. The AES hardware accelerator supports the following block cipher modes and message authentication codes:

- AES ECB encrypt-only
- AES CBC encrypt-only
- AES CTR encrypt/decrypt
- AES CBC-MAC
- AEC CCM (uses a combination of CTR + CBC-MAC hardware via software drivers)

Software implementation of AES GCM cipher mode using LAES for low-level cryptographic operations is supported. The AES hardware accelerator can be fed with plaintext/ciphertext from either the CPU or using DMA. Sustained throughput of one 16-byte ECB block per 23 cycles is possible, corresponding to > 30Mbps.

8.7 Timers

A large selection of timers is available as part of the CC27xx devices. These timers are:

Real-Time Clock (RTC)

The RTC is a 67-bit, 2-channel timer running on the LFCLK system clock. The RTC is active in STANDBY and ACTIVE power states. Upon asynchronous device resets (that is, reset pin, exit from shutdown, LF clock loss, and so on), the RTC is reset. However, upon internally generated synchronous device resets (for example, WDT, debug reset, system reset request, and so on), the RTC is not reset.

The RTC accumulates the time elapsed since its last reset on each LFCLK. It is also possible to update the RTC value as part of the RTC configuration to match a different time base. The RTC counter is incremented by LFCLK at a rate between 30kHz and 34kHz, depending on the LF clock source. LFINC indicates the period of LFCLK in μ s with an additional granularity of 16 fractional bits and is used to increment time in the RTC. Hardware measurement circuitry can automatically measure the LFCLK period whenever HFXT is running and update LFINC.

The counter can be read from two 32-bit registers. RTC.TIME8U has a range of approximately 9.5 hours with an LSB representing 8 microseconds. RTC.TIME524M has a range of approximately 71.4 years with an LSB representing 524 milliseconds.

There is hardware synchronization between the system timer (SYSTIM) and the RTC so that the multichannel and higher resolution SYSTIM remain in synchronization with the RTC's time base.

The RTC has two channels: one compare channel and one capture channel, which is capable of waking the device out of the standby power state. The RTC compare channel is typically used only by system software and only during the standby power state.

System Timer (SYSTIM)

The SYSTIM is a 34-bit, 6-channel wrap-around timer with a per-channel selectable 32b time slice with either a 1µs resolution and 1h11m35s range or 250ns resolution and 17m54s range. One channel is reserved for system software, three channels are reserved for radio software, and two channels are freely available to user applications. All user-available channels support both capture and single-shot compare (posting an event) operations.

For software convenience, a hardware synchronization mechanism automatically ensures that the RTC and SYSTIM share a common time base. Another software convenience feature is that SYSTIM qualifies any submitted compare values so that the timer channel will immediately trigger if the submitted event is in the immediate past (4.294s with 1µs resolution and 1.049s with 250ns resolution).

General Purpose Timers (LGPT)

The CC27xx devices provide four LGPTs with 3×16 -bit timers and 1×32 -bit timers, all running on up to 48MHz. The LGPTs support a wide range of features such as:

- Three capture/compare channels
- · One-shot or periodic counting
- Pulse width modulation (PWM)
- · Time counting between edges and edge counting
- · Input filter implemented on each of the channels for all timers
- IR generation feature using Timer-0 and Timer-1
- · Dead band feature available on Timer-1

The timer capture/compare and PWM signals are connected to IOs through the IO controller module (IOC), and the internal timer event connections to CPU, DMA, and other peripherals are through the event fabric, which allows the timers to interact with signals such as GPIO inputs, other timers, DMA, and ADC. Two LGPTs support quadrature decoder mode to enable buffered decoding of quadrature-encoded sensor signals. The LGPTs are available in device Active and Idle power modes.

Table 8-1. Timer Comparison

| CC27xx GP TIMER FEATURE | TIMER 0 | TIMER 1 | TIMER 2 | TIMER 3 |
|---------------------------------|---------|---------|---------|---------|
| Counter Width | 16-bit | 16-bit | 16-bit | 32-bit |
| Quadrature Decoder | Yes | No | Yes | No |
| Park Mode on Fault | No | Yes | No | No |
| Programmable Deadband Insertion | No | Yes | No | No |

Watchdog Timer

The watchdog timer is used to regain control if the system operates incorrectly due to software errors. Upon counter expiry, the watchdog timer resets the device when periodic monitoring of the system components and tasks fails to verify proper functionality. The watchdog timer runs on a 32kHz clock rate and operates in device active, idle, and standby modes, and cannot be stopped once enabled.

Product Folder Links: CC2755R10 CC2755P10

8.8 Algorithm Processing Unit (APU)

The APU is a generic mathematical acceleration module that operates with single-precision floating-point numbers (IEEE 754 format) and is optimized to work with complex numbers. The APU runs at 96MHz, operates autonomously from the main CPU in the system, and can be used to offload numerically intensive operations. This module handles efficient vector (and matrix) operations and sustains one complex Multiply-and-Add operation per clock cycle. These operations are extensively used in advanced post-processing algorithms needed for accurate phase-based distance estimation using the Bluetooth® LE Channel Sounding mechanism; thereby, optimizing the overall channel-sounding-based distance estimation latency and energy efficiency.

The APU has 8KB of local data memory (separate from the system RAM) where the application can read/write data. The APU incorporates a programmable core to handle advanced APIs developed for the APU hardware accelerator submodules. The SimpleLink™ Low Power F3 software development kit (SDK) includes the APU APIs that are executed by the APU programmable core within RAM-based local program memory (separate from the system RAM and VCE data RAM).

The user application handles chain-calling the different APU APIs and moving data in/out of the APU local data memory. The SimpleLink™ Low Power F3 software development kit (SDK) supports SW drivers and examples to enable APU operations.

8.9 Serial Peripherals and I/O

The CC27xx devices provide 2xUART, 2xSPI, 1xI2C, and 1xI2S serial peripherals.

The UART module implements universal asynchronous receiver and transmitter functions. They support flexible baud-rate generation up to a maximum of 3Mbps and IRDA SIR mode of operation.

The SPI module supports the SPI controller and peripherals up to 12MHz with configurable phase and polarity.

The I^2C module communicates with devices compatible with the I^2C standard. The I^2C interface can handle 100kHz and 400kHz operation and can serve as both controller and target.

The I²S interface handles digital audio and can also interface with pulse-density modulation microphones (PDM).

The I/O controller (IOC) controls the digital I/O pins and contains multiplexer circuitry to allow a set of peripherals to be assigned to I/O pins in a fixed manner over DIOs. All digital I/Os are interrupt and wake-up capable, have a programmable pullup and pulldown function, and can generate an interrupt on a negative or positive edge (configurable). When configured as an output, pins can function as either push-pull, open-drain, or open-source.

Some GPIOs have high-drive capabilities, which are marked in bold in RHA (6mm × 6mm) Pinout, 0.5mm Pitch (Top View).

VDDIO split rail I/O supply enables using a different I/O supply rail compared to the main VDDS supply rail. This enables applications to interface with other system components at a different voltage level compared to the main VDDS power supply level. GPIOs supplied by VDDIO and VDDS supplies are listed in orange or blue, respectively, in RHA (6mm × 6mm) Pinout, 0.5mm Pitch (Top View). The voltage rails supplied on VDDS and VDDIO pins can ramp up and down in any order, independent of each other, and any combination of VDDS and VDDIO supplies being unpowered can be supported indefinitely. This simplifies the system-level power supply design, where it is not needed to control the availability or ramp-up/down sequence of these supplies at the VDDIO and VDDS pins.

For more information, see the CC27xx SimpleLink™ Wireless MCU Technical Reference Manual.

8.10 Battery and Temperature Monitor

A combined temperature and battery voltage monitor are available in the CC27xx devices. The battery and temperature monitor allow an application to continuously monitor on-chip temperature and supply voltage and respond to changes in environmental conditions as needed. The module contains window comparators to interrupt the system CPU when the temperature or supply voltage goes outside defined windows. These events can also be used to wake up the device from Standby mode through the Always-On (AON) event fabric.

8.11 Voltage Glitch Monitor (VGM)

The CC27xx devices support the VGM on-chip to mitigate security risks from low-cost and low-effort physical non-invasive fault attacks.

The VGM is enabled by default during device boot time operations. After the device boot operations, the VGM can be kept enabled or optionally disabled during device runtime operations based on application security needs.

8.12 µDMA

The device includes a direct memory access (µDMA) controller. The µDMA controller provides a way to offload data-transfer tasks from the system CPU, thus allowing for more efficient use of the processor and the available bus bandwidth. The µDMA controller can perform transfers between memory and memory or between memory and peripherals. The µDMA controller supports triggers from the various on-chip peripherals and can be programmed to automatically perform transfers between peripherals and memory when the peripheral is ready to transfer more data.

For applications using TrustZone-M, upon device bootup, the µDMA is configured as a secure peripheral by default and can be configured as a non-secure peripheral by the application. The µDMA channels cannot individually be configured as secure or non-secure peripherals, and so, the application is required to select at compile time if the SDK shall configure the µDMA controller as a secure or non-secure peripheral. The SimpleLink Low Power F3 SDK µDMA drivers support using the µDMA as a non-secure peripheral for application operations.

Some features of the µDMA controller include the following (this is not an exhaustive list):

- Channel operation of up to 12 channels, with 8 channels having a dedicated peripheral interface (multiplexed) and 4 channels having the ability to be triggered through configurable events. Transfer modes: memory-tomemory, memory-to-peripheral, peripheral-to-memory, and peripheral-to-peripheral
- Data sizes of 8, 16, and 32 bits
- Ping-pong mode for continuous streaming of data

8.13 Debug

On-chip debugging is supported through the serial wire debug (SWD) interface, which is an Arm® bi-directional 2-wire protocol that communicates with the SWD controller and enables complete debug functionality. SWD is fully compatible with the Texas Instruments XDS family of debug probes. The Cortex M33 core supports advanced debugging features, including Data Watchpoint and Trace unit (DWT), which supports watchpoints and system profiling for the CM33 processor. The Cortex M33 core also supports Instrumentation Trace Macrocell (ITM), which supports print-style debugging to trace operating system (OS) and application events and provides diagnostic system information.

8.14 Power Management

To minimize power consumption, the CC27xx devices support multiple power modes and power management features (see Table 8-2).

SOFTWARE CONFIGURABLE POWER MODES (1) **RESET PIN** MODE HELD **ACTIVE** IDLE **STANDBY SHUTDOWN** CPU Active Off Off Off Off Flash On Available Off Off Off SRAM On On Retention Off Off Radio Available Available Off Off Off **Duty Cycled** Supply System On On Off Off Full (2) CPU register retention Full Full No No SRAM retention Full Full Full Off Off 96 MHz high-speed clock HFOSC (3) HFOSC (3) Duty Cycled (4) Off Off (HFCLK) 80/90/98 MHz Auxiliary Off **AFOSC AFOSC** Off Off Frequency Oscillator (AFOSC) (5) 32 kHz low-speed clock (LFCLK) LFXT or LFOSC LFXT or LFOSC LFXT or LFOSC Off Off IOC, BATMON, Peripherals Available Available Off Off RTC. LPCOMP Wake-up on RTC N/A Available Off Off Available Wake-up on pin edge N/A Available Available Available Off Wake-up on reset pin On On On On On Brownout detector (BOD) On On **Duty Cycled** Off Off Power-on reset (POR) On On On On On Watchdog timer (WDT) Available Available Available Off Off

Table 8-2. Power Modes

- (1) "Available" indicates that the specific IP or feature can be enabled by the user application in the corresponding device operating modes. "On" indicates that the specific IP or feature is turned on, irrespective of the user application configuration of the device in the corresponding device operating mode. "Off" indicates that the specific IP or feature is turned off and not available for the user application in the corresponding device operating mode.
- (2) Software-based retention of CPU registers with context save and restore when entering and exiting standby power mode.
- (3) In active and idle power modes, the HFOSC tracking loop is enabled by default, thereby enabling 48MHz HFXT as well.
- (4) If LFOSC HW calibration is enabled in standby mode, then, HFOSC tracking loop requiring HFXT is dutycycled. If not, only HFOSC is duty-cycled during recharge cycles.
- (5) AFOSC standby behavior is controlled by AFOSCCTL.AUTODIS. When set, AFOSC is disabled when entering standby. Enabling AFOSC again on standby exit must be done by software.

In the **Active** mode, both of MCU and AON power domains are powered. Clock gating is used to minimize power consumption. Clock gating to peripherals/subsystems is controlled manually by the CPU.

In **Idle** mode, the CPU is in sleep, but selected peripherals and subsystems (such as the radio) can be active. Infrastructure (Flash, ROM, SRAM, bus) clock gating is possible depending on the state of the DMA and debug subsystem.

In **Standby** mode, only the always-on (AON) domain is active. An external wake-up event, RTC event, or comparator event (LP-COMP) is required to bring the device back to active mode. Pin Reset will also drive the device from Standby to Active. MCU peripherals with retention do not need to be reconfigured when waking up again, and the CPU continues execution from where it went into standby mode. All GPIOs are latched in standby mode.

In **Shutdown** mode, the device is entirely turned off (including the AON domain), and the I/Os are latched with the value they had before entering shutdown mode. A change of state on any I/O pin defined as a wake from shutdown pin wakes up the device and functions as a reset trigger. The CPU can differentiate between a reset

in this way and a reset-by-reset pin or power-on reset, or thermal shutdown reset, by reading the reset status register. The only states retained in this mode are the latched I/O state, the 3V register bank, and the flash memory contents.

Note

The power, RF, and clock management for the CC27xx devices require specific configuration and handling by software for optimized performance. This configuration and handling are implemented in the TI-provided drivers that are part of the SimpleLink Low Power F3 software development kit (SDK). Therefore, TI highly recommends using this software framework for all application development on the device. The complete SDK with FreeRTOS, device drivers, and examples are offered free of charge in source code.

8.15 Clock Systems

The CC27xx devices have the following internal system clocks.

- The 96MHz HFCLK is used as the main system (MCU and peripherals) clock. This is driven by the internal 96MHz RC Oscillator (HFOSC), which can track its accuracy against an external 48MHz crystal (HFXT). The HFOSC tracking loop is enabled by default by the system ROM bootcode. Radio and ADC operate with the external 48MHz crystal oscillator.
- The 32.768kHz LFCLK is used as the internal low-frequency system clock. It is used for the RTC, the
 watchdog timer (if enabled in standby power mode), and to synchronize the radio timer after exiting Standby
 power mode. LFCLK can be driven by the internal 30-34kHz RC Oscillator (LFOSC), a 32.768kHz watch-type
 crystal, or a clock input in LFXT bypass mode. When using a crystal or the internal RC oscillator, the device
 can output the 32kHz LFCLK signal to other devices, thereby reducing the overall system cost.
- The 80/90.3168/98.304 MHz AFOSC (Auxiliary Frequency Oscillator) is used as the high-frequency clock for generating needed frequencies to support audio I²S operations. The AFOSC tracks the HFOSC, which in turn, tracks its accuracy against the external 48MHz crystal (HFXT). AFOSC can generate 80, 90.3168, and 98.304MHz clock frequencies with a 10ppb tracking accuracy from HFOSC.

8.16 Network Processor

Depending on the product configuration, the CC27xx device can function as a wireless network processor (WNP—a device running the wireless protocol stack with the application running on a separate host MCU), or as a system-on-chip (SoC—with the application and protocol stack running on the system CPU inside the device).

In the first case, the external host MCU communicates with the device using SPI or UART. In the second case, the application must be written according to the application framework supplied with the wireless protocol stack.

8.17 Integrated BALUN, High Power PA (Power Amplifier)

For applications that need an increased RF link budget, the CC27xx high-power PA device variants ("P" devices) can support RF transmit output power operation up to +20dBm EIRP (Effective Isotropic Radiated Power). To optimize the system BOM components for applications using the integrated high-power PA, the "P" devices support an integrated RF switch with a single RF pin capable of transmitting and receiving signals on the same pin.

The CC27xx "R" devices support the regular PA (CC27xxRx) with radio transmit output power up to +10dBm EIRP. Both the CC27xx "R" and the "P" variants support an integrated BALUN with a single-ended 50-ohm RF pin, thereby reducing the number of external components needed for the antenna interface.

9 Application, Implementation, and Layout

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

9.1 Reference Designs

Follow these reference designs very closely when implementing designs using the device.

Special attention must be paid to RF component placement, decoupling capacitors, and DC/DC regulator components, as well as ground connections for all of these.

LP-EM-CC2745R10-Q1 Design Files

The CC2745R10-Q1 LaunchPad Design Files contain detailed schematics and layouts to build application-specific boards using the device.

Sub1GHz and 2.4GHz Antenna Kit for LaunchPad™ Development Kit and SensorTag The antenna kit allows real-life testing to identify the optimal antenna for your application. The antenna kit includes 16 antennas for frequencies from 169MHz to 2.4GHz, including:

- PCB antennas
- · Helical antennas
- · Chip antennas
- Dual-band antennas for 868MHz and 915MHz combined with 2.4GHz

The antenna kit includes a JSC cable to connect to the Wireless MCU LaunchPad Development Kits and SensorTags.

9.2 Junction Temperature Calculation

This section shows the different techniques for calculating the junction temperature under various operating conditions. For more details, see *Semiconductor and IC Package Thermal Metrics*.

There are two recommended ways to derive the junction temperature from other measured temperatures:

1. From the package temperature:

$$T_I = \psi_{\rm IT} \times P + T_{\rm case} \tag{1}$$

2. From the board temperature:

$$T_{J} = \psi_{JB} \times P + T_{board} \tag{2}$$

P is the power dissipated from the device and can be calculated by multiplying the current consumption with the supply voltage. Thermal resistance coefficients are found in *Thermal Resistance Characteristics*.

Example:

In this example, we assume a simple use case where the radio is transmitting continuously at 0dBm output power. Let us assume we want to maintain a junction temperature of 105°C and the supply voltage is 3.3V. Using Equation 1, the temperature difference between the top of the case and junction temperature is calculated. To calculate P, look up the current consumption for TX 0dBm at 105°C from the plot Figure 7-10. At 105°C, the current consumption is approximately 9.5mA. This means that P is 9.5mA × 3.3V = 31.35mW.

The maximum case temperature is then calculated as:

$$T_{\text{case}} < T_j - 0.2^{\circ C} / W \times 31.35 \quad mW = 104.99^{\circ C}$$
 (3)

For various application use cases, current consumption for other modules may have to be added to calculate the appropriate power dissipation. For example, the MCU may be running simultaneously as the radio, peripheral modules may be enabled, and so on. Typically, the easiest way to find the peak current consumption, and thus the peak power dissipation in the device, is to measure as described in the *Measuring CC13xx and CC26xx Current Consumption* application report.

10 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed as follows.

10.1 Device Nomenclature

To designate the stages in the product development cycle, TI assigns prefixes to all part numbers and/or date-code. Each device has one of three prefixes/identifications: X, P, or null (no prefix) (for example, X is in preview; therefore, an X prefix/identification is assigned).

Device development evolutionary flow:

- **X** Experimental device that is not necessarily representative of the final device's electrical specifications and may not use the production assembly flow.
- **P** Prototype device that is not necessarily the final silicon die and may not necessarily meet final electrical specifications.

null Production version of the silicon die that is fully qualified.

Production devices have been characterized fully, and the quality and reliability of the devices are demonstrated fully. TI's standard warranty applies.

Predictions show that prototype devices (X or P) have a greater failure rate than the standard production devices. Texas Instruments recommends that these devices not be used in any production system because their expected end-use failure rate is still undefined. Only qualified production devices are to be used.

TI device nomenclature also includes a suffix with the device family name. This suffix indicates the package type (for example, *RHA*).

For orderable part numbers of devices in the RHA (6mm × 6mm) package type, see the *Package Option Addendum* of this document, the Device Information in Section 3, the TI website (www.ti.com), or contact your TI sales representative.

Figure 10-1. Device Nomenclature

10.2 Tools and Software

The CC2755x10 devices are supported by a variety of software and hardware development tools.

Software

SimpleLink™ lowpower software development kit (SDK) The SimpleLink low-power software development kit (SDK) provides a complete package for the development of wireless applications on the CC27xx family of devices. The SDK includes a comprehensive software package for the CC2755R and CC2755P devices, including the following protocol stacks:

- Bluetooth Low Energy 6.x
- Zigbee

- Thread
- Matter
- Proprietary Systems

The SimpleLink low-power SDK is part of Tl's SimpleLink MCU platform, offering a single development environment that delivers flexible hardware, software, and tool options for customers developing wired and wireless applications. For more information about the SimpleLink MCU Platform, visit https://www.ti.com/simplelink.

Zephyr

Our Zephyr stack delivers a fully certified open-source and portable Bluetooth solution while maintaining low power, enabled by TI's Bluetooth LE Controller. Through a TI-managed downstream branch, we ensure faster delivery, bug fixes, and controlled updates for CC2340 and CC2755 devices. Customers benefit from portability across silicon vendors, extensive testing with Twister, Ztest frameworks and additional validation, plus a complete production-ready SDK and TI tool ecosystem.

Development Tools

Code Composer Studio™ Integrated Development Environment (IDE) Code Composer Studio is an integrated development environment (IDE) that supports TI's Microcontroller and Embedded Processors portfolio. Code Composer Studio comprises a suite of tools used to develop and debug embedded applications. It includes an optimizing C/C++ compiler, source code editor, project build environment, debugger, profiler, and many other features. The intuitive IDE provides a single user interface, taking you through each step of the application development flow. Familiar tools and interfaces allow users to get started faster than ever before. Code Composer Studio combines the advantages of the Eclipse® software framework with advanced embedded debug capabilities from TI, resulting in a compelling, feature-rich development environment for embedded developers.

CCS has support for all SimpleLink Wireless MCUs and includes support for EnergyTrace[™] software (application energy usage profiling). A real-time object viewer plugin is available for Free-RTOS.

Code Composer Studio is provided free of charge when used in conjunction with the XDS debuggers included on a LaunchPad Development Kit.

IAR Embedded Workbench® for Arm®

IAR Embedded Workbench[®] is a set of development tools for building and debugging embedded system applications using assembler, C, and C++. It provides a completely integrated development environment that includes a project manager, editor, and build tools. IAR has support for all SimpleLink Wireless MCUs. It offers broad debugger support, including XDS110, IAR I-jet™, and Segger J-Link™. IAR is also supported out of the box on most software examples provided as part of the SimpleLink SDK.

A 30-day evaluation or a 32KB size-limited version is available through iar.com.

SmartRF™ Studio

SmartRF™ Studio is a Windows® application that can be used to evaluate and configure SimpleLink Wireless MCUs from Texas Instruments. The application will help designers of RF systems to easily evaluate the radio at an early stage in the design process. It is especially useful for generating configuration register values and for practical testing and debugging of the RF system. SmartRF Studio can be used either as a standalone application, through a command line interface to enable more automation, or together with applicable evaluation boards or debug probes for the RF device. Features of the SmartRF Studio include:

- Link tests send and receive packets between nodes
- Antenna and radiation tests set the radio in continuous wave TX and RX states
- Export radio configuration code for use with the TI SimpleLink SDK RF driver
- Custom GPIO configuration for signaling and control of external switches

CCS UniFlash

CCS UniFlash is a standalone tool used to program on-chip flash memory on TI MCUs. UniFlash has a GUI, command line, and scripting interface, CCS UniFlash is available free of charge.

10.2.1 SimpleLink™ Microcontroller Platform

The SimpleLink microcontroller platform sets a new standard for developers with the broadest portfolio of wired and wireless Arm® MCUs (System-on-Chip) in a single software development environment. Delivering flexible hardware, software, and tool options for your IoT applications. Invest once in the SimpleLink software development kit and use throughout your entire portfolio. Learn more about Simplelink.

10.2.2 Software License and Notice

The system ROM firmware includes open-source MCUBoot software licensed under APACHE-2.0. See the following links for more information:

- MCUBoot Apache 2.0 license terms
- MCUBoot notice information

10.3 Documentation Support

To receive notification of documentation updates on data sheets, errata, application notes, and similar, navigate to the device product folder on Tl.com. In the upper right corner, click on Alert me to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

The current documentation that describes the MCU, related peripherals, and other technical collateral is listed as follows.

TI Resource Explorer

TI Resource Explorer Software examples, libraries, executables, and documentation are available for your device and development board.

Errata

CC2755R/P Silicon Errata

The silicon errata describes the known exceptions to the functional specifications for each silicon revision of the device and describes how to recognize a device revision.

Application Reports

All application reports for the CC275xR10 devices are found in the device product folder.

Technical Reference Manual (TRM)

CC27xx SimpleLink™ Wireless MCU TRM

The TRM provides a detailed description of all modules and peripherals available in the device family.

10.4 Support Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

10.5 Trademarks

SmartRF[™], SimpleLink[™], Code Composer Studio[™], EnergyTrace[™], TI E2E[™] are trademarks of Texas Instruments.

I-jet[™] is a trademark of IAR Systems AB.

J-Link[™] is a trademark of SEGGER Microcontroller Systeme GmbH.

Arm®, Cortex®, and TrustZone® are registered trademarks of Arm Limited.

Bluetooth® is a registered trademark of Bluetooth SIG, Inc.

CoreMark® is a registered trademark of Embedded Microprocessor Benchmark Consortium Corporation.

Zigbee® is a registered trademark of Zigbee.

Wi-Fi® is a registered trademark of Wi-Fi Alliance.

Eclipse® is a registered trademark of Eclipse Foundation.

IAR Embedded Workbench® is a registered trademark of IAR Systems AB.

Windows® is a registered trademark of Microsoft Corporation.

All trademarks are the property of their respective owners.

10.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

10.7 Glossary

TI Glossary

This glossary lists and explains terms, acronyms, and definitions.

11 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

| | December 2025)) | Page |
|---|---|------|
| • | Updated Bluetooth LE qualification status | 1 |
| • | Updated Zigbee certification status | 1 |
| | Removed reference to BP-EM-CS | |

⁽¹⁾ Status: For more details on status, see our product life cycle.

- (3) RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.
- (4) Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
- (5) MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.
- (6) Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

⁽²⁾ Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

PLASTIC QUAD FLATPACK - NO LEAD

This image is a representation of the package family, actual package may vary. Refer to the product data sheet for package details.

PLASTIC QUAD FLATPACK - NO LEAD

NOTES:

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
 2. This drawing is subject to change without notice.
- 3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.

PLASTIC QUAD FLATPACK - NO LEAD

NOTES: (continued)

- 4. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/slua271).
- 5. Vias are optional depending on application, refer to device data sheet. If any vias are implemented, refer to their locations shown on this view. It is recommended that vias under paste be filled, plugged or tented.

PLASTIC QUAD FLATPACK - NO LEAD

NOTES: (continued)

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you fully indemnify TI and its representatives against any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to TI's Terms of Sale, TI's General Quality Guidelines, or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products. Unless TI explicitly designates a product as custom or customer-specified, TI products are standard, catalog, general purpose devices.

TI objects to and rejects any additional or different terms you may propose.
