

CDx4HC164, CDx4HCT164 High-Speed CMOS Logic 8-Bit Serial-In, Parallel-Out Shift Register

1 Features

- Buffered inputs
- Asynchronous reset
- Typical $f_{MAX} = 60\text{MHz}$ at $V_{CC} = 5\text{V}$, $C_L = 15\text{pF}$, $T_A = 25^\circ\text{C}$
- Fanout (overtemperature range)
 - Standard Outputs: 10 LSTTL loads
 - Bus driver outputs: 15 LSTTL loads
- Wide operating temp range: -55°C to 125°C
- Balanced propagation delay and transition times
- Significant power reduction compared to LSTTL logic ICs
- HC types
 - 2V to 6V operation
 - High noise immunity: $N_{IL} = 30\%$, $N_{IH} = 30\%$ of V_{CC} at $V_{CC} = 5\text{V}$
- HCT types
 - 4.5V to 5.5V operation
 - Direct LSTTL input logic compatibility, $V_{IL} = 0.8\text{V}$ (Max), $V_{IH} = 2\text{V}$ (Min)
 - CMOS input compatibility, $I_I \leq 1\mu\text{A}$ at V_{OL} , V_{OH}

2 Description

The 'HC164 and 'HCT164 are 8-bit, serial-in, parallel-out, shift registers with asynchronous reset. Data is shifted on the positive edge of Clock (CLK). A LOW on the RESET (CLR) pin resets the shift register and all outputs go to the LOW state regardless of the input conditions. Two Serial Data inputs (A and B) are provided, either one can be used as a data enable control.

**J, D, and N Package
14-Pin CDIP, SOIC, and PDIP
Top View**

4 Specifications

4.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V _{CC}	Supply voltage range	-0.5	7	V
I _{IK}	Input clamp current ⁽²⁾	(V _I < 0 or V _I > V _{CC})		±20 mA
I _{OK}	Output clamp current ⁽²⁾	(V _O < 0 or V _O > V _{CC})		±20 mA
I _O	Continuous output current	(V _O = 0 to V _{CC})		±25 mA
	Continuous current through V _{CC} or GND			±50 mA
T _J	Junction temperature			150 °C
T _{stg}	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

4.2 Recommended Operating Conditions

		MIN	MAX	UNIT	
V _{CC}	Supply voltage range	HC types	2	6	V
		HCT types	4.5	5.5	
V _I , V _O	Input or output voltage	0	V _{CC}	V	
	Input rise and fall time	2 V	1000	ns	
		4.5 V	500		
		6 V	400		
T _A	Temperature range	-55	125	°C	

4.3 Thermal Information

THERMAL METRIC ⁽¹⁾		D (SOIC)	N (PDIP)	UNIT
		14 PINS	14 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	86	80	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC package thermal metrics](#) application report.

4.4 Electrical Characteristics

PARAMETER		TEST CONDITIONS ⁽¹⁾	V _{CC} (V)	25°C			–40°C to 85°C		–55°C to 125°C		UNIT

t _H	Hold time	4.5	4	4	4	ns			
t _{REM}	CLR to clock, Removal time	6	16	20	24	ns			

4.6 Switching Characteristics

Input t_r , $t_f = 6\text{ns}$. $C_L = 50\text{pF}$ unless otherwise noted

PARAMETER		V_{CC} (V)	25°C		- 40°C to 85°C	- 55°C to 125°C	UNIT
			TYP	MAX	MAX	MAX	
HC TYPES							
t_{PLH} , t_{PHL}	CLK to Q	2		170	212	255	ns
		4.5	14 ⁽³⁾	34	43	51	ns
		6		29	36	43	ns
t_{PLH} , t_{PHL}	$\overline{\text{CLR}}$ to Q	2		140	175	210	ns
		4.5	11 ⁽³⁾	28	35	42	ns
		6		24	30	36	ns
t_{TLH} , t_{THL}	Output transition times	2		75		110	ns
		4.5		15		22	ns
		6		13		19	ns
f_{MAX}	Maximum clock frequency	5	60 ⁽³⁾				ns
C_{IN}	Input capacitance			10	10	10	pF
C_{PD}	Power dissipation capacitance ^{(1) (2)}	5	47				pF
HCT TYPES							
t_{PLH} , t_{PHL}	CLK to Q	4.5		36	45	54	ns
		5	15 ⁽³⁾				
t_{PLH} , t_{PHL}	$\overline{\text{CLR}}$ to Q	4.5		38	46	57	ns
		5	16 ⁽³⁾				
t_{TLH} , t_{THL}	Output Transition time	4.5		15	19	22	ns
C_{IN}	Input Capacitance						pF
f_{MAX}	Maximum clock frequency		54 ⁽⁴⁾				MHz
C_{PD}	Power dissipation capacitance ^{(1) (2)}	5	49	10	10	10	pF

(1) C_{PD} is used to determine the dynamic power consumption, per device.

(2) $P_D = V_{CC}^2 f_i + \Sigma (C_L V_{CC}^2 + f_o)$ where f_i = Input Frequency, f_o = Output Frequency, C_L = Output Load Capacitance, V_{CC} = Supply Voltage.

(3) $C_L = 15\text{pF}$. $V_{CC} = 5$.

(4) $C_L = 15\text{pF}$.

5 Parameter Measurement Information

Phase relationships between waveforms were chosen arbitrarily. All input pulses are supplied by generators having the following characteristics: $PRR \leq 1\text{MHz}$, $Z_O = 50\Omega$, $t_t < 6\text{ns}$.

For clock inputs, f_{max} is measured when the input duty cycle is 50%.

The outputs are measured one at a time with one input transition per measurement.

6 Detailed Description

6.1 Overview

The 'HC164 and 'HCT164 are 8-bit, serial-in, parallel-out, shift registers with asynchronous reset. Data is shifted on the positive edge of Clock (CLK). A LOW on the RESET ($\overline{\text{CLR}}$) pin resets the shift register and all outputs go to the LOW state regardless of the input conditions. Two Serial Data inputs (A and B) are provided, either one can be used as a data enable control.

6.2 Functional Block Diagram

Figure 6-1. Functional Block Diagram

6.3 Device Functional Modes

Truth Table⁽¹⁾

OPERATING MODE	INPUTS				OUTPUTS	
	$\overline{\text{CLR}}$	CLK	A	B	Q _A	Q _B - Q _H
RESET (CLEAR)	L	X	X	X	L	L - L
Shift	H	↑	l	l	L	q _A - q _F
	H	↑	l	h	L	q _A - q _F
	H	↑	h	l	L	q _A - q _F
	H	↑	h	h	H	q _A - q _F

- (1) H = High voltage level.
h = High voltage level one set-up time prior to the low-to-high clock transition.
l = Low voltage level one set-up time prior to the low-to-high clock transition.
L = Low voltage level.
X = Don't care.
↑ = Transition from low to high level.
q_n = Lower case letters indicate the state of the reference input clock transition.

7 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating, located in the [Recommended Operating Conditions](#). Each V_{CC} terminal must have a good bypass capacitor to prevent power disturbance. TI recommends a $0.1\mu\text{F}$ capacitor for this device. Paralleling multiple bypass caps is acceptable to reject different frequencies of noise. The $0.1\mu\text{F}$ and $1\mu\text{F}$ capacitors are commonly used in parallel. The bypass capacitor must be installed as close to the power terminal as possible for better results.

8 Layout

8.1 Layout Guidelines

When using multiple-input and multiple-channel logic devices, inputs must not be left floating. In many cases, functions of digital logic devices, or parts of functions, are unused. For example, when a triple-input AND gate only uses two inputs or the buffer gates only use three of the four buffers. Such unused input pins must not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. All unused inputs of digital logic devices must be connected to a logic high or logic low voltage, as defined by the input voltage specifications, to prevent them from floating. The logic level that must be applied to any particular unused input depends on the function of the device. Generally, the inputs are tied to GND or V_{CC} , whichever makes more sense for the logic function or is more convenient.

9 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

9.1 Documentation Support

9.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

9.3 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

9.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

9.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

9.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

10 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision D (March 2022) to Revision E (March 2024) Page

- Updated the functional block diagram image..... 1

Changes from Revision C (August 2003) to Revision D (March 2022) Page

- Updated the numbering, formatting, tables, figures, and cross-references throughout the document to reflect current data sheet standards..... 1
- Updated naming conventions to reflect modern TI function. DS1 is now A; DS2 is now B; Q₀ is now Q_A; Q₁ is now Q_B; Q₂ is now Q_C; Q₃ is now Q_D; CP is now CLK; \overline{MR} is now \overline{CLR} ; Q₄ is now Q_E; Q₅ is now Q_F; Q₆ is now Q_G; Q₇ is now Q_H 3

11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

- (3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
