CSD95480RWJ Synchronous Buck NexFET™ Smart Power Stage

1 Features

- 70-A Continuous Operating Current Capability
- Over 95% System Efficiency at 30 A
- High-Frequency Operation (up to 1.25 MHz)
- Diode Emulation Function
- Temperature Compensated Bi-Directional Current Sense
- Analog Temperature Output
- Fault Monitoring
- 3.3-V and 5-V PWM Signal Compatible
- Tri-State PWM Input
- Integrated Bootstrap Switch
- Optimized Dead Time for Shoot-Through Protection
- High-Density QFN 5-mm × 6-mm Footprint
- Ultra-Low-Inductance Package
- System Optimized PCB Footprint
- Thermally Enhanced Topside Cooling
- RoHS Compliant – Lead-Free Terminal Plating
- Halogen Free

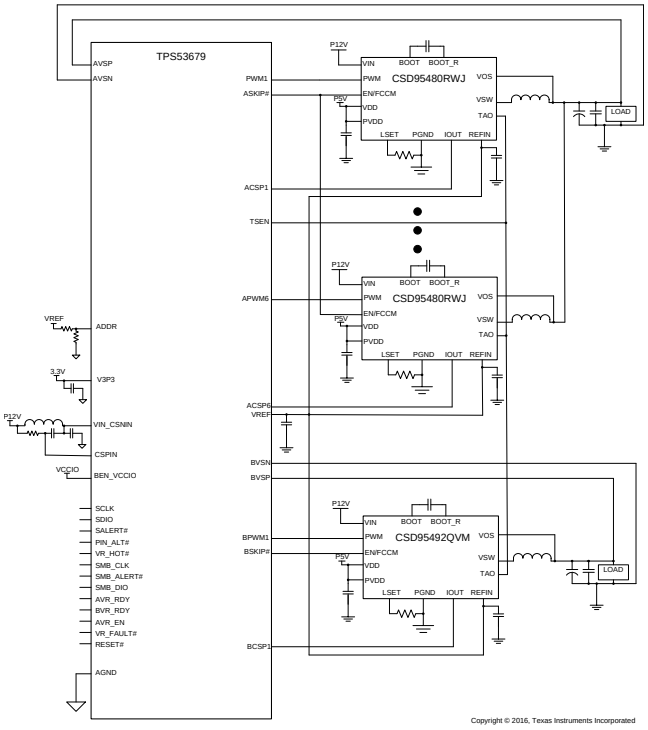
2 Applications

- Multiphase Synchronous Buck Converters
  - High-Frequency Applications
  - High-Current, Low-Duty Cycle Applications
- POL DC-DC Converters
- Memory and Graphic Cards
- Desktop and Server VR12.x / VR13.x V-Core Synchronous Buck Converters

3 Description

The CSD95480RWJ NexFET™ power stage is a highly optimized design for use in a high-power, high-density synchronous buck converter. This product integrates the driver IC and power MOSFETs to complete the power stage switching function. This combination produces high-current, high-efficiency, and high-speed switching capability in a small 5-mm × 6-mm outline package. It also integrates the accurate current sensing and temperature sensing functionality to simplify system design and improve accuracy. In addition, the PCB footprint has been optimized to help reduce design time and simplify the completion of the overall system design.

Application Diagram

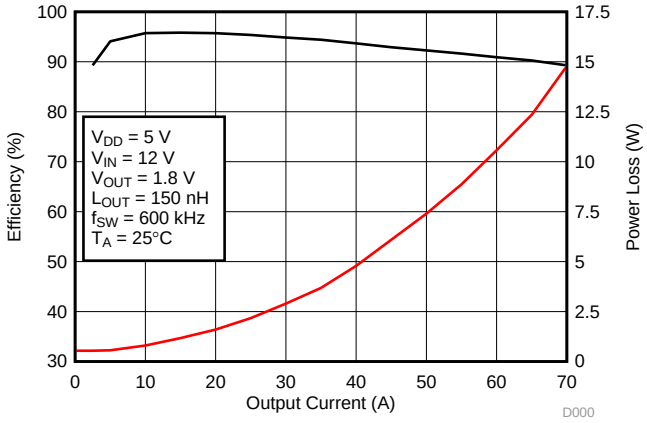


Device Information(1)

DEVICE	MEDIA	QTY	PACKAGE	SHIP
CSD95480RWJ	13-Inch Reel	2500	QFN 5.00-mm × 6.00-mm Package	Tape and Reel
CSD95480RWJT	7-Inch Reel	250		

(1) For all available packages, see the orderable addendum at the end of the data sheet.

Typical Power Stage Efficiency and Power Loss



An IMPORTANT NOTICE at the end of this data sheet addresses availability, warranty, changes, use in safety-critical applications, intellectual property matters and other important disclaimers. PRODUCTION DATA.

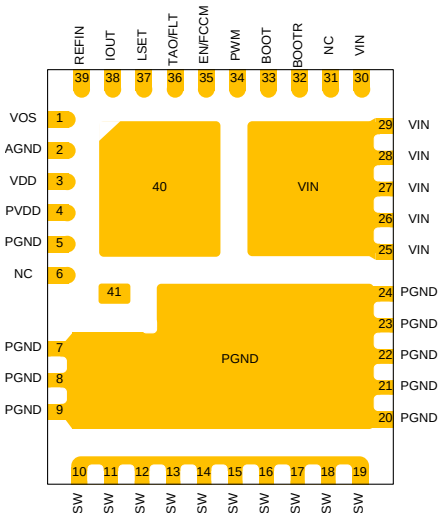
5 Pin Configuration and Functions

Top View



Pin Functions

PIN		DESCRIPTION
NAME	NUMBER	
VOS	1	Output voltage sensing pin for the internal current sensing circuitry.
AGND	2	This pin is internally connected to PGND.
VDD	3	Supply voltage for internal circuitry. This pin should be bypassed directly to pin 2.
PVDD	4	Supply voltage for gate drivers. This pin should be bypassed to PGND.
PGND	5	Power ground.
NC	6	Not connected. This pin needs to be left floating in application.
PGND	7-9	Power ground.
VSW	10-19	Phase node connecting the HS MOSFET source and LS MOSFET drain – pin connection to the output inductor.
PGND	20-24	Power ground.
VIN	25-30	Input voltage pin. Connect input capacitors close to this pin.
NC	31	Not connected. This pin needs to be left floating in application.
BOOTR	32	Return path for HS gate driver. It is connected to VSW internally.
BOOT	33	Bootstrap capacitor connection. Connect a minimum 0.1-µF, 16-V, X5R ceramic capacitor from BOOT to BOOTR pins. The bootstrap capacitor provides the charge to turn on the control FET. The bootstrap diode is integrated.
PWM	34	Tri-state input from external controller. Logic low sets control FET gate low and sync FET gate high. Logic high sets control FET gate high and sync FET gate low. Both MOSFET gates are set low if PWM stays in Hi-Z for greater than the tri-state shutdown holdoff time (T_{3HT}).
EN/FCCM	35	This dual function pin either enables the diode emulation function or can be used as a simple enable for the device. When this pin is driven into the tri-state window and held there for more than the tri-state holdoff time, diode emulation mode is enabled for sync FET. When the pin is high, device operates in forced continuous conduction mode. When the pin is low, both FETs are held off. An internal resistor pulls this pin low if left floating.
TAO/FLT	36	Temperature amplifier output. Reports a voltage proportional to the IC temperature. An ORing diode is integrated in the IC. When used in multiphase application, a single wire can be used to connect the TAO pins of all the ICs. Only the highest temperature will be reported. TAO will be pulled up to 3.3 V if thermal shutdown LSOC or HSS detection circuit is tripped.
LSET	37	A resistor from this pin to PGND pin sets the inductor value for the internal current sensing circuitry.
IOUT	38	Output of current sensing amplifier. V(IOUT) – V(REFIN) is proportional to the phase current.
REFIN	39	External reference voltage input for current sensing amplifier.
PGND	40	Power ground.
NC	41	Not connected. This pin needs to be left floating in application.

6 Specifications

6.1 Absolute Maximum Ratings

T_A = 25°C (unless otherwise stated)(1)

		MIN	MAX	UNIT
	V_{IN} to P_{GND}	–0.3	20	V
	V_{IN} to V_{SW}	–0.3	20	V
	V_{IN} to V_{SW} (10 ns)		23	V
	V_{SW} to P_{GND}	–0.3	20	V
	V_{SW} to P_{GND} (10 ns)	–7	23	V
	V_{DD} to P_{GND}	–0.3	7	V
	PV_{DD} to P_{GND}	–0.3	7	V
	EN/FCCM, TAO/FLT, LSET to P_{GND}	–0.3	V_{DD} + 0.3	V
	IOUT, VOS, PWM to P_{GND}	–0.3	7	V
	REFIN	–0.3	3.6	V
	BOOT to BOOTR(2)	–0.3	V_{DD} + 0.3	V
	BOOT to P_{GND}	–0.3	30	V
T_J	Operating junction temperature	–55	150	°C
T_{stg}	Storage temperature	–55	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) Should not exceed 7 V.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM)	±2000	V
		Charged-device model (CDM)	±500	

6.3 Recommended Operating Conditions

T_A = 25°C (unless otherwise stated)

			MIN	MAX	UNIT
V_{DD}	Driver supply voltage		4.5	5.5	V
PV_{DD}	Gate drive voltage		4.5	5.5	V
V_{IN}	Input supply voltage(1)		4.5	16	V
V_{OUT}	Output voltage			5.5	V
	PWM to P_{GND}			V_{DD} + 0.3	V
I_{OUT}	Continuous output current	V_{IN} = 12 V, V_{DD} = 5 V, PV_{DD} = 5 V, V_{OUT} = 1.2 V, f_{SW} = 500 kHz(2)		70	A
I_{OUT-PK}	Peak output current(3)			90	A
f_{SW}	Switching frequency	C_{BST} = 0.1 µF (min), V_{OUT} = 2.5 V (max)		1250	kHz
	On-time duty cycle	f_{SW} = 1 MHz		85%	
	Minimum PWM on-time		20		ns
	Operating junction temperature		–40	125	°C

(1) Operating at high V_{IN} can create excessive AC voltage overshoots on the switch node (V_{SW}) during MOSFET switching transients. For reliable operation, the switch node (V_{SW}) to ground voltage must remain at or below the *Absolute Maximum Ratings*.
(2) Measurement made with six 10-µF (TDK C3216X7R1C106KT or equivalent) ceramic capacitors across V_{IN} to P_{GND} pins.
(3) System conditions as defined in Note 2. Peak output current is applied for t_p = 50 µs.

6.4 Thermal Information

T_A = 25°C (unless otherwise stated)

THERMAL METRIC		MIN	TYP	MAX	UNIT
θ_{JC}	Thermal resistance, junction-to-case (top of package)		7.4		°C/W
θ_{JB}	Thermal resistance, junction-to-board(1)		2.2		°C/W
Ψ_{JT}	Junction-to-top characterization parameter		0.9		°C/W

(1) θ_{JB} is determined with the device mounted on a 1-in^2 (6.45-cm^2), 2-oz (0.071-mm) thick Cu pad on a 1.5-in × 1.5-in, 0.06-in (1.52-mm) thick FR4 board based on hottest board temperature within 1 mm of the package.

8 Device and Documentation Support

8.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

8.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

TI E2E™ Online Community ***TI's Engineer-to-Engineer (E2E) Community.*** Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support ***TI's Design Support*** Quickly find helpful E2E forums along with design support tools and contact information for technical support.

8.3 Trademarks

NexFET, E2E are trademarks of Texas Instruments.
All other trademarks are the property of their respective owners.

8.4 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

8.5 Glossary

SLYZ022 — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

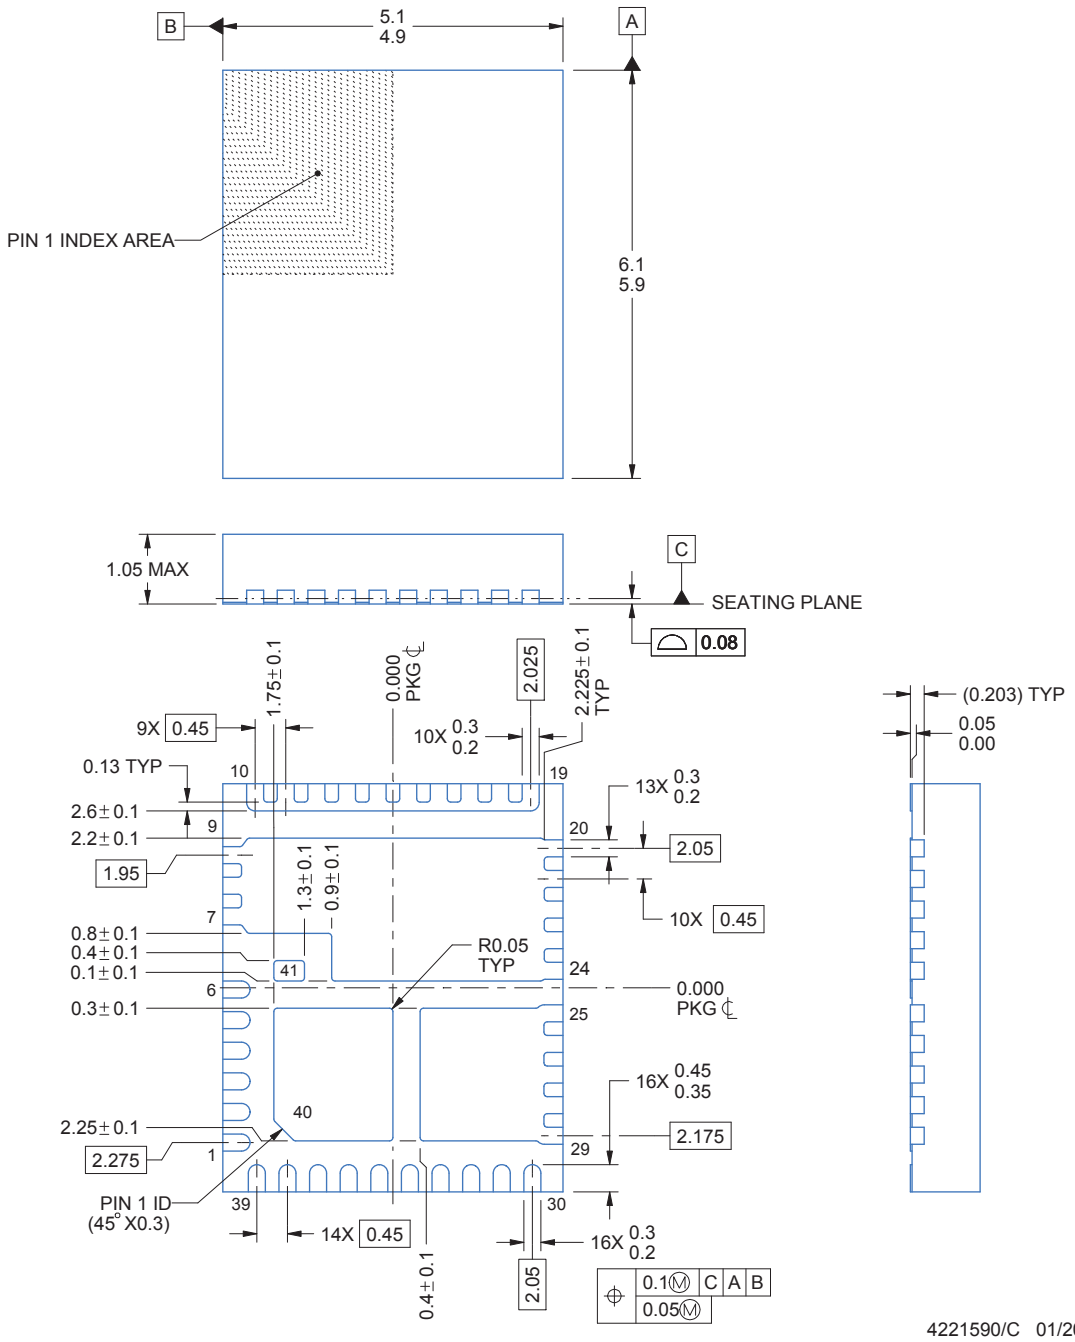
9 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

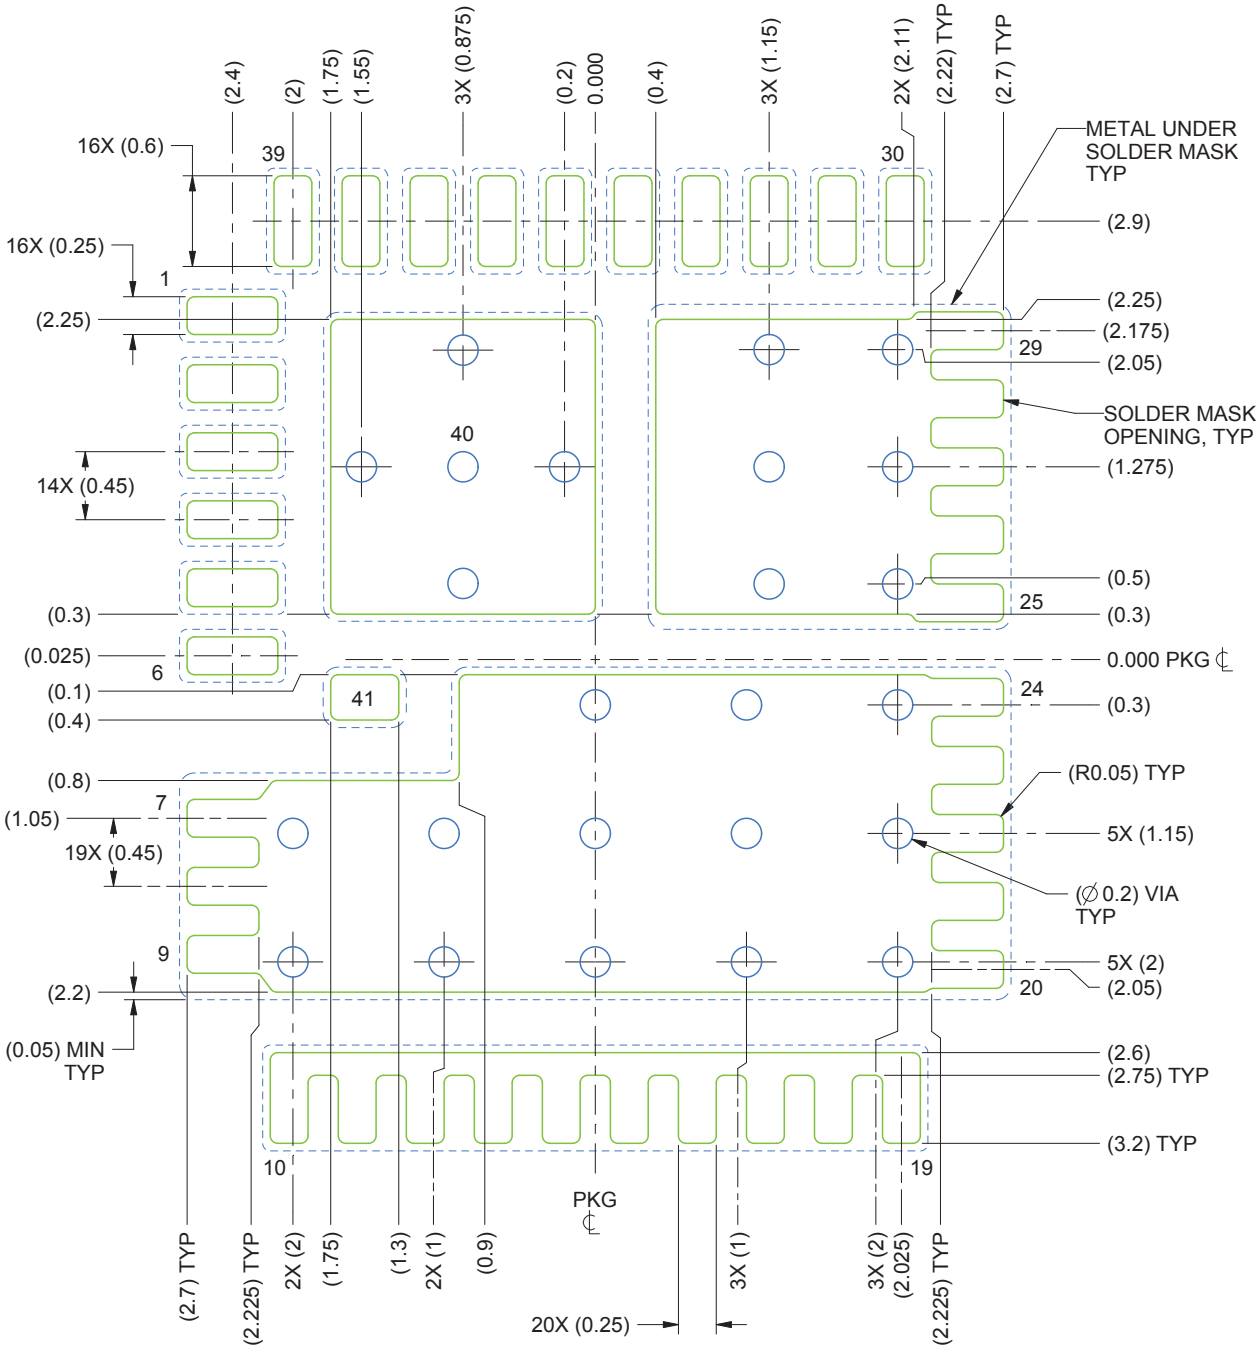
9.1 Mechanical Drawing



1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pads must be soldered to the printed circuit board for optimal thermal and mechanical performance.

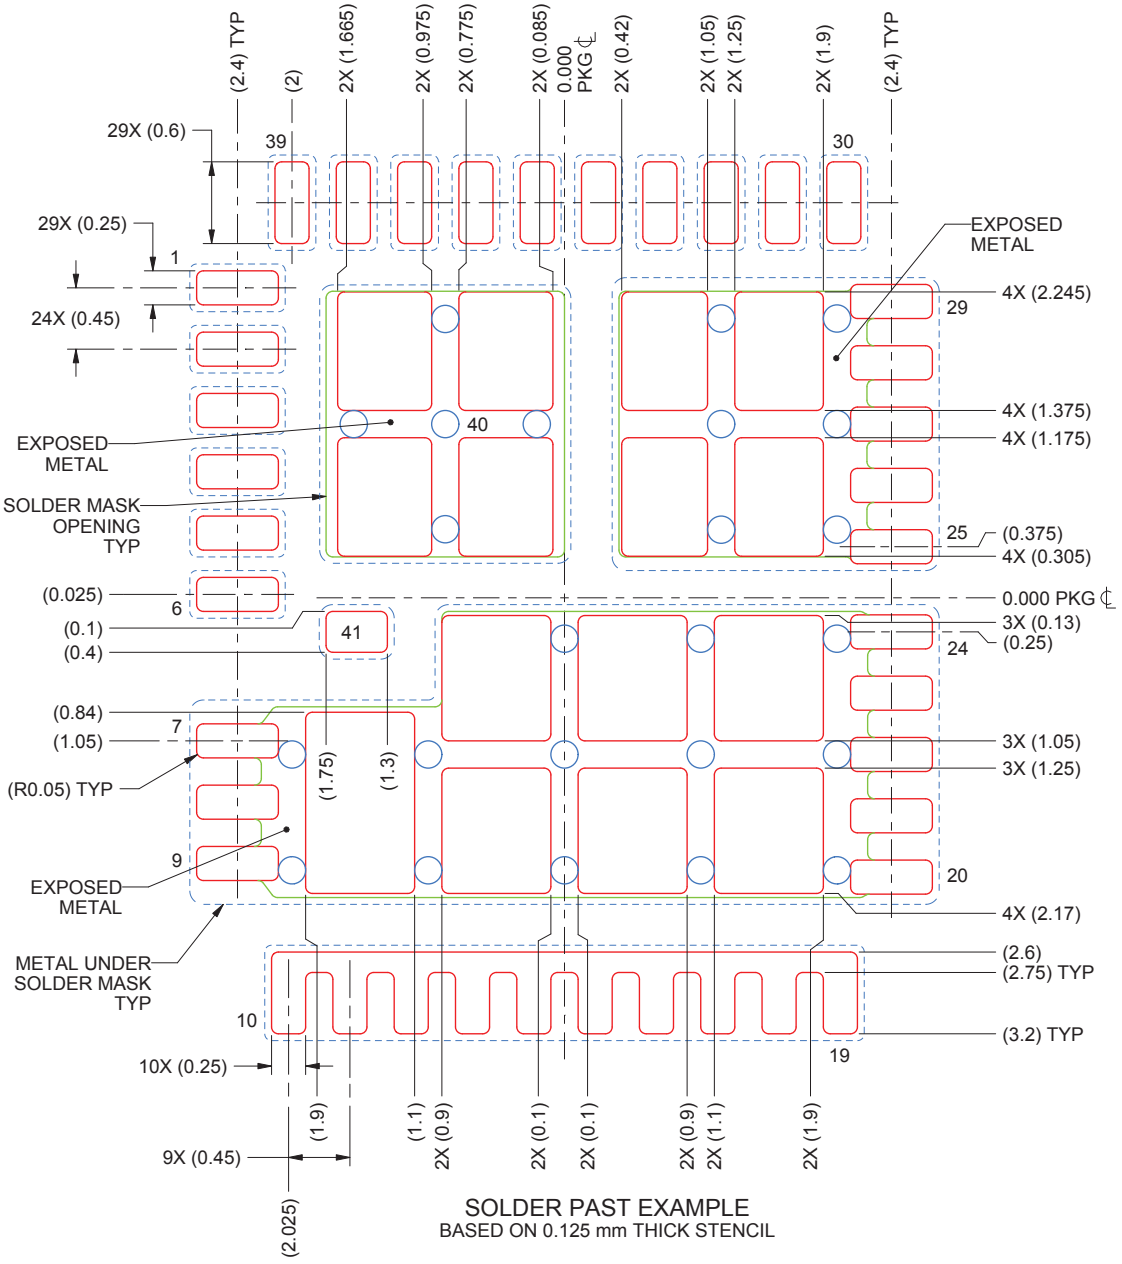
Copyright © 2017, Texas Instruments Incorporated

9.2 Recommended PCB Land Pattern



1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This package is designed to be soldered to thermal pads on the board. For more information, see *QFN/SON PCB Attachment* (SLUA271).

9.3 Recommended Stencil Opening



1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION
