

# LM4040-N/-Q1 Precision Micropower Shunt Voltage Reference

## 1 Features

- LM4040-N-Q1 AEC Q-100 qualified for automotive applications
  - Extended Grade 1:  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ ,  $T_A$
  - Industrial Grade 3:  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ ,  $T_A$
- Small packages: SOT-23, TO-92, and SC70
- No output capacitor required
- Tolerates capacitive loads
- Fixed reverse breakdown voltages of 2.048V, 2.5V, 3V, 4.096V, 5V, 8.192V, and 10V
- Key specifications (2.5V LM4040-N)
  - Output voltage tolerance (A Grade,  $25^{\circ}\text{C}$ ):  $\pm 0.1\%$  (maximum)
  - Low output noise (10Hz to 10kHz):  $35\mu\text{V}_{\text{rms}}$  (typical)
  - Wide operating current range:  $60\mu\text{A}$  to 15mA
  - Industrial temperature range:  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$
  - Extended temperature range:  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$
  - Low temperature coefficient: 100ppm/ $^{\circ}\text{C}$  (maximum)

## 2 Applications

## 3 Description

Designed for space-critical applications, the LM4040-N precision voltage reference is available in small SC70 and SOT-23 surface-mount package. The advanced design of the LM4040-N eliminates the need for an external stabilizing capacitor while maintaining stability with any capacitive load, thus making the LM4040-N easy to use. Further reducing design effort is the availability of several fixed reverse breakdown voltages: 2.048V, 2.5V, 3V, 4.096V, 5V, 8.192V, and 10V. The minimum operating current increases from  $60\mu\text{A}$  for the 2.5V LM4040-N to  $100\mu\text{A}$  for the 10V LM4040-N. All versions have a maximum operating current of 15mA.

The LM4040-N uses a fuse and Zener-zap reverse breakdown voltage trim during wafer sort to make sure that the prime parts have an accuracy of better than  $\pm 0.1\%$  (A grade) at  $25^{\circ}\text{C}$ . Bandgap reference temperature drift curvature correction and low dynamic impedance provide stable reverse breakdown voltage accuracy over a wide range of operating temperatures and currents.

Also available is the LM4041-N with two reverse breakdown voltage versions: adjustable and 1.2V. See the LM4041-N data sheet ([SNOS641](#)).

### Device Information

PART NUMBER	PACKAGE <sup>(1)</sup>	BODY SIZE (NOM) <sup>(2)</sup>
LM4040-N	TO-92 (3)	4.30mm × 4.30mm
	SC70 (5)	2.00mm × 1.25mm
	SOT-23 (3)	2.92mm × 1.30mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

(2) The package size (length × width) is a nominal value and includes pins, where applicable.

**Shunt Reference Application Schematic**

## Pin Functions

NAME	PIN			I/O	DESCRIPTION
	SOT-23	TO-92	SC70		
Anode	2	1	1	O	Anode pin, normally grounded
Cathode	1	2	3	I/O	Shunt Current/Output Voltage
*	3 <sup>(2)</sup>	3 <sup>(1)</sup>	2 <sup>(1)</sup>	—	Must float or connect to anode
NC	—	—	4, 5	—	No connect

- (1) This pin must be left floating or connected to pin 1.  
 (2) This pin must be left floating or connected to pin 2.

## 5 Specifications

### 5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1) (2)</sup>

		MIN	MAX	UNIT
Reverse current			20	mA
Forward current			10	mA
Power dissipation ( $T_A = 25^\circ\text{C}$ ) <sup>(3)</sup>	SOT-23 (M3) package		306	mW
	TO-92 (Z) package		550	mW
	SC70 (M7) package		241	mW
Storage temperature, $T_{\text{stg}}$		-65	150	$^\circ\text{C}$

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under [Section 5.3](#). Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/ Distributors for availability and specifications.
- (3) The maximum power dissipation must be derated at elevated temperatures and is dictated by  $T_{\text{Jmax}}$  (maximum junction temperature),  $R_{\theta\text{JA}}$  (junction to ambient thermal resistance), and  $T_A$  (ambient temperature). The maximum allowable power dissipation at any temperature is  $\text{PD}_{\text{max}} = (T_{\text{Jmax}} - T_A)/R_{\theta\text{JA}}$  or the number given in the *Absolute Maximum Ratings*, whichever is lower. For the LM4040-N,  $T_{\text{Jmax}} = 125^\circ\text{C}$ , and the typical thermal resistance ( $R_{\theta\text{JA}}$ ), when board mounted, is  $326^\circ\text{C/W}$  for the SOT-23 package, and  $180^\circ\text{C/W}$  with 0.4" lead length and  $170^\circ\text{C/W}$  with 0.125" lead length for the TO-92 package and  $415^\circ\text{C/W}$  for the SC70 Package.

### 5.2 ESD Ratings

		VALUE	UNIT
$V_{\text{(ESD)}}$ Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	$\pm 2000$	V
	Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	$\pm 200$	

- (1) JEDEC document JEP155 states that 500V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250V CDM allows safe manufacturing with a standard ESD control process.

### 5.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup> <sup>(2)</sup>

		MIN	MAX	UNIT
Temperature ( $T_{\min} \leq T_A \leq T_{\max}$ )	Industrial Temperature	$-40^{\circ}\text{C} \leq T_A \leq 85$		$^{\circ}\text{C}$
	Extended Temperature	$-40 \leq T_A \leq 125^{\circ}\text{C}$		$^{\circ}\text{C}$
Reverse Current	LM4040-N-2.0	60	15	$\mu\text{A}$ to mA
	LM4040-N-2.5	60	15	$\mu\text{A}$ to mA
	LM4040-N-3.0	62	15	$\mu\text{A}$ to mA
	LM4040-N-4.1	68	15	$\mu\text{A}$ to mA
	LM4040-N-5.0	74	15	$\mu\text{A}$ to mA
	LM4040-N-8.2	91	15	$\mu\text{A}$ to mA
	LM4040-N-10.0	100	15	$\mu\text{A}$ to mA

- (1) *Absolute Maximum Ratings* indicate limits beyond which damage to the device may occur. *Recommended Operating Conditions* indicate conditions for which the device is functional, but do not ensure specific performance limits. For ensured specifications and test conditions, see the *Electrical Characteristics*. The ensured specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.
- (2) The maximum power dissipation must be derated at elevated temperatures and is dictated by  $T_{\text{Jmax}}$  (maximum junction temperature),  $R_{\theta\text{JA}}$  (junction to ambient thermal resistance), and  $T_A$  (ambient temperature). The maximum allowable power dissipation at any temperature is  $\text{PD}_{\text{max}} = (T_{\text{Jmax}} - T_A)/R_{\theta\text{JA}}$  or the number given in the Absolute Maximum Ratings, whichever is lower. For the LM4040-N,  $T_{\text{Jmax}} = 125^{\circ}\text{C}$ , and the typical thermal resistance ( $R_{\theta\text{JA}}$ ), when board mounted, is  $326^{\circ}\text{C}/\text{W}$  for the SOT-23 package, and  $180^{\circ}\text{C}/\text{W}$  with 0.4" lead length and  $170^{\circ}\text{C}/\text{W}$  with 0.125" lead length for the TO-92 package and  $415^{\circ}\text{C}/\text{W}$  for the SC70 package.

### 5.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		LM4040-N			UNIT
		DBZ (SOT-23)	LP (TO-92)	DCK (SC70)	
		3 PINS	3 PINS	5 PINS	
$R_{\theta\text{JA}}$	Junction-to-ambient thermal resistance	291.9	166	267	$^{\circ}\text{C}/\text{W}$
$R_{\theta\text{JC(top)}}$	Junction-to-case (top) thermal resistance	114.3	88.2	95.6	$^{\circ}\text{C}/\text{W}$
$R_{\theta\text{JB}}$	Junction-to-board thermal resistance	62.3	145.2	48.1	$^{\circ}\text{C}/\text{W}$
$\psi_{\text{JT}}$	Junction-to-top characterization parameter	7.4	32.5	2.4	$^{\circ}\text{C}/\text{W}$
$\psi_{\text{JB}}$	Junction-to-board characterization parameter	61	N/A	47.3	$^{\circ}\text{C}/\text{W}$
$R_{\theta\text{JC(bot)}}$	Junction-to-case (bottom) thermal resistance	N/A	N/A	N/A	$^{\circ}\text{C}/\text{W}$

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report (SPRA953).

## 5.5 Electrical Characteristics: 2V LM4040-N $V_R$ Tolerance Grades 'A' And 'B'; Temperature Grade 'I'

all other limits  $T_A = T_J = 25^\circ\text{C}$ . The grades A and B designate initial Reverse Breakdown Voltage tolerances of  $\pm 0.1\%$  and  $\pm 0.2\%$ , respectively.

PARAMETER		TEST CONDITIONS		MIN <sup>(1)</sup>	TYP	MAX <sup>(1)</sup>	UNIT	
$V_R$	Reverse Breakdown Voltage	$I_R = 100\mu\text{A}$			2.048		V	
	Reverse Breakdown Voltage Tolerance <sup>(2)</sup>	$I_R = 100\mu\text{A}$	LM4040AIM3 LM4040AIZ			$\pm 2$	mV	
			LM4040BIM3 LM4040BIZ LM4040BIM7			$\pm 4.1$		
			LM4040AIM3 LM4040AIZ	$T_A = T_J = T_{\text{MIN}}$ to $T_{\text{MAX}}$			$\pm 15$	mV
			LM4040BIM3 LM4040BIZ LM4040BIM7	$T_A = T_J = T_{\text{MIN}}$ to $T_{\text{MAX}}$			$\pm 17$	
$I_{R\text{MIN}}$	Minimum Operating Current		$T_A = T_J = 25^\circ\text{C}$		45	60	$\mu\text{A}$	
			$T_A = T_J = T_{\text{MIN}}$ to $T_{\text{MAX}}$			65		
$\Delta V_R / \Delta T$	Average Reverse Breakdown Voltage Temperature Coefficient <sup>(2)</sup>	$I_R = 10\text{mA}$			$\pm 20$		ppm/ $^\circ\text{C}$	
		$I_R = 1\text{mA}$	$T_A = T_J = 25^\circ\text{C}$		$\pm 15$		ppm/ $^\circ\text{C}$	
			$T_A = T_J = T_{\text{MIN}}$ to $T_{\text{MAX}}$			$\pm 100$	ppm/ $^\circ\text{C}$	
$\Delta V_R / \Delta I_R$	Reverse Breakdown Voltage Change with Operating Current Change <sup>(3)</sup>	$I_{R\text{MIN}} \leq I_R \leq 1\text{mA}$	$T_A = T_J = 25^\circ\text{C}$		0.3	0.8	mV	
			$T_A = T_J = T_{\text{MIN}}$ to $T_{\text{MAX}}$			1		
		$1\text{mA} \leq I_R \leq 15\text{mA}$	$T_A = T_J = 25^\circ\text{C}$			2.5	6	mV
			$T_A = T_J = T_{\text{MIN}}$ to $T_{\text{MAX}}$				8	
$Z_R$	Reverse Dynamic Impedance	$I_R = 1\text{mA}$ , $f = 120\text{Hz}$ , $I_{AC} = 0.1 I_R$			0.3	0.8	$\Omega$	
$e_N$	Wideband Noise	$I_R = 100\mu\text{A}$ $10\text{Hz} \leq f \leq 10\text{kHz}$			35		$\mu\text{V}_{\text{rms}}$	
$\Delta V_R$	Reverse Breakdown Voltage Long Term Stability	$t = 1000\text{hrs}$ $T = 25^\circ\text{C} \pm 0.1^\circ\text{C}$ $I_R = 100\mu\text{A}$			120		ppm	
$V_{\text{HYST}}$	Thermal Hysteresis <sup>(4)</sup>	$\Delta T = -40^\circ\text{C}$ to $125^\circ\text{C}$			0.08%			

- Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are verified through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.
- The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R / \Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R / \Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^\circ\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^\circ\text{C}$  is shown below:  
A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^\circ\text{C}$  is shown below:  
C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
Therefore, as an example, the A-grade 2.5V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\text{V} \times 0.75\% = \pm 19\text{mV}$ .
- Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.
- Thermal hysteresis is defined as the difference in voltage measured at  $25^\circ\text{C}$  after cycling to temperature  $-40^\circ\text{C}$  and the  $25^\circ\text{C}$  measurement after cycling to temperature  $125^\circ\text{C}$ .

## 5.6 Electrical Characteristics: 2V LM4040-N $V_R$ Tolerance Grades 'C', 'D', And 'E'; Temperature Grade 'I'

all other limits  $T_A = T_J = 25^\circ\text{C}$ . The grades C, D and E designate initial Reverse Breakdown Voltage tolerances of  $\pm 0.5\%$ ,  $\pm 1\%$  and  $\pm 2\%$ , respectively.

$e_N$	Wideband Noise	$I_R = 100\mu\text{A}$ $10\text{Hz} \leq f \leq 10\text{kHz}$			35		$\mu\text{V}_{\text{rms}}$

## 5.6 Electrical Characteristics: 2V LM4040-N $V_R$ Tolerance Grades 'C', 'D', And 'E'; Temperature Grade 'I' (continued)

all other limits  $T_A = T_J = 25^\circ\text{C}$ . The grades C, D and E designate initial Reverse Breakdown Voltage tolerances of  $\pm 0.5\%$ ,  $\pm 1\%$  and  $\pm 2\%$ , respectively.

PARAMETER		TEST CONDITIONS	MIN <sup>(2)</sup>	TYP <sup>(1)</sup>	MAX <sup>(2)</sup>	UNIT
$\Delta V_R$	Reverse Breakdown Voltage Long Term Stability	$t = 1000$ hrs $T = 25^\circ\text{C} \pm 0.1^\circ\text{C}$ $I_R = 100\mu\text{A}$		120		ppm
$V_{\text{HYST}}$	Thermal Hysteresis <sup>(5)</sup>	$\Delta T = -40^\circ\text{C}$ to $125^\circ\text{C}$		0.08%		

- Typicals are at  $T_J = 25^\circ\text{C}$  and represent most likely parametric norm.
- Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are verified through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.
- The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\max\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\max\Delta T$  is the maximum difference in temperature from the reference point of  $25^\circ\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\max\Delta T = 65^\circ\text{C}$  is shown below:  
 A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\max\Delta T = 100^\circ\text{C}$  is shown below:  
 C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 Therefore, as an example, the A-grade 2.5V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5V \times 0.75\% = \pm 19$  mV.
- Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.
- Thermal hysteresis is defined as the difference in voltage measured at  $25^\circ\text{C}$  after cycling to temperature  $-40^\circ\text{C}$  and the  $25^\circ\text{C}$  measurement after cycling to temperature  $125^\circ\text{C}$ .

## 5.7 Electrical Characteristics: 2V LM4040-N $V_R$ Tolerance Grades 'C', 'D', And 'E'; Temperature Grade 'E'

all other limits  $T_A = T_J = 25^\circ\text{C}$ . The grades C, D and E designate initial Reverse Breakdown Voltage tolerances of  $\pm 0.5\%$ ,  $\pm 1\%$  and  $\pm 2\%$ , respectively.

$\Delta V_R$ Reverse Breakdown Voltage Long Term Stability	$t = 1000$ hrs $T = 25^\circ\text{C} \pm 0.1^\circ\text{C}$ $I_R = 100\mu\text{A}$		120		ppm	
$V_{\text{HYST}}$ Thermal Hysteresis <sup>(5)</sup>	$\Delta T = -40^\circ\text{C}$ to $125^\circ\text{C}$		0.08%			

- Typicals are at  $T_J = 25^\circ\text{C}$  and represent most likely parametric norm.
- Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are verified through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.
- The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^\circ\text{C}$  to  $T_{MIN}$  or  $T_{MAX}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^\circ\text{C}$  is shown below:  
 A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^\circ\text{C}$  is shown below:  
 C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 Therefore, as an example, the A-grade 2.5V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\text{V} \times 0.75\% = \pm 19$  mV.

 A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\max\Delta T = 100^\circ\text{C}$  is shown below:  
 C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 Therefore, as an example, the A-grade 2.5V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5V \times 0.75\% = \pm 19$  mV.
- (4) Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.
- (5) Thermal hysteresis is defined as the difference in voltage measured at  $+25^\circ\text{C}$  after cycling to temperature  $-40^\circ\text{C}$  and the  $25^\circ\text{C}$  measurement after cycling to temperature  $125^\circ\text{C}$ .

### 5.13 Electrical Characteristics: 3V LM4040-N $V_R$ Tolerance Grades 'C', 'D', And 'E'; Temperature Grade 'E'

all other limits  $T_A = T_J = 25^\circ\text{C}$ . The grades C, D and E designate initial Reverse Breakdown Voltage tolerances of  $\pm 0.5\%$ ,  $\pm 1\%$  and  $\pm 2\%$ , respectively.

$V_{\text{HYST}}$	Thermal Hysteresis <sup>(5)</sup>	$\Delta T = -40^\circ\text{C}$ to $125^\circ\text{C}$			0.08%		

(1) Typicals are at  $T_J = 25^\circ\text{C}$  and represent most likely parametric norm.

(2) Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are verified through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.

- (3) The (overtemperature) limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\max\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\max\Delta T$  is the maximum difference in temperature from the reference point of 25°C to  $T_{MIN}$  or  $T_{MAX}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\max\Delta T = 65^\circ\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$
- The total overtemperature tolerance for the different grades in the extended temperature range where  $\max\Delta T = 100^\circ\text{C}$  is shown below:
- C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$
- Therefore, as an example, the A-grade 2.5V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\text{V} \times 0.75\% = \pm 19\text{mV}$ .
- (4) Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.
- (5) Thermal hysteresis is defined as the difference in voltage measured at +25°C after cycling to temperature -40°C and the 25°C measurement after cycling to temperature 125°C.

## 5.14 Electrical Characteristics: 4.1V LM4040-N $V_R$ Tolerance Grades 'A' And 'B'; Temperature Grade 'I'

all other limits  $T_A = T_J = 25^\circ\text{C}$ . The grades A and B designate initial Reverse Breakdown Voltage tolerances of  $\pm 0.1\%$  and  $\pm 0.2\%$ , respectively.

**LM4040-N, LM4040-N-Q1**SNOS633L – DECEMBER 1991 – REVISED JUNE 2024

---

The total overtemperature tolerance for the different grades in the extended temperature range where max  $\Delta T = 100\text{ }^{\circ}\text{C}$  is shown below:

C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$

D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$

E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150\text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$

Therefore, as an example, the A-grade 2.5V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\text{V} \times 0.75\% = \pm 19\text{ mV}$ .

- (4) Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.
- (5) Thermal hysteresis is defined as the difference in voltage measured at  $+25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

$\Delta V_R$	Reverse Breakdown Voltage Long Term Stability	$t = 1000\text{hrs}$ $T = 25^\circ\text{C} \pm 0.1^\circ\text{C}$ $I_R = 100\mu\text{A}$			120		ppm
$V_{\text{HYST}}$	Thermal Hysteresis <sup>(5)</sup>	$\Delta T = -40^\circ\text{C}$ to $125^\circ\text{C}$			0.08%		

- Typicals are at  $T_J = 25^\circ\text{C}$  and represent most likely parametric norm.
- Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are verified through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.
- The (overtemperature) limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R / \Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R / \Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^\circ\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^\circ\text{C}$  is shown below:  
 A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150\text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^\circ\text{C}$  is shown below:  
 C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 Therefore, as an example, the A-grade 2.5V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\text{V} \times 0.75\% = \pm 19\text{mV}$ .
- Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.
- Thermal hysteresis is defined as the difference in voltage measured at  $+25^\circ\text{C}$  after cycling to temperature  $-40^\circ\text{C}$  and the  $25^\circ\text{C}$  measurement after cycling to temperature  $125^\circ\text{C}$ .

### 5.17 Electrical Characteristics: 5V LM4040-N $V_R$ Tolerance Grades 'C' And 'D'; Temperature Grade 'I'

all other limits  $T_A = T_J = 25^\circ\text{C}$ . The grades C and D designate initial Reverse Breakdown Voltage tolerances of  $\pm 0.5\%$  and  $\pm 1\%$ , respectively.

 C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150\text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 Therefore, as an example, the A-grade 2.5V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\text{V} \times 0.75\% = \pm 19\text{ mV}$ .
- (4) Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.
- (5) Thermal hysteresis is defined as the difference in voltage measured at  $+25^\circ\text{C}$  after cycling to temperature  $-40^\circ\text{C}$  and the  $25^\circ\text{C}$  measurement after cycling to temperature  $125^\circ\text{C}$ .

## 5.20 Electrical Characteristics: 8.2V Lm4040-N $V_R$ Tolerance Grades 'C' And 'D'; Temperature Grade 'I'

all other limits  $T_A = T_J = 25^\circ\text{C}$ . The grades C and D designate initial Reverse Breakdown Voltage tolerances of  $\pm 0.5\%$  and  $\pm 1\%$ , respectively.

## 7 Detailed Description

### 7.1 Overview

The LM4040 device is a precision micropower shunt voltage reference available in 7 different fixed-output voltage options and three different packages to meet small footprint requirements. The part is also available in five different tolerance grades.

### 7.2 Functional Block Diagram

### 7.3 Feature Description

The LM4040 device is effectively a precision Zener diode. The part requires a small quiescent current for regulation, and regulates the output voltage by shunting more or less current to ground, depending on input voltage and load. The only external component requirement is a resistor between the cathode and the input voltage to set the input current. An external capacitor can be used on the input or output, but is not required.

### 7.4 Device Functional Modes

The LM4040 device is a fixed output voltage part, where the feedback is internal. Therefore, the part can only operate in a closed loop mode and the output voltage cannot be adjusted. The output voltage will remain in regulation as long as  $I_R$  is between  $I_{RMIN}$ , see [Section 5.5](#), and  $I_{RMAX}$ , 15mA. Proper selection of the external resistor for input voltage range and load current range will ensure these conditions are met.

## 8 Application and Implementation

### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

### 8.1 Application Information

The LM4040-N is a precision micropower curvature-corrected bandgap shunt voltage reference. For space critical applications, the LM4040-N is available in SOT-23 and SC70 surface-mount packages. The LM4040-N has been designed for stable operation without the need of an external capacitor connected between the + pin and the – pin. If, however, a bypass capacitor is used, the LM4040-N remains stable. Reducing design effort is the availability of several fixed reverse breakdown voltages: 2.048V, 2.5V, 3V, 4.096V, 5V, 8.192V, and 10V. The minimum operating current increases from 60µA for the LM4040-N-2.048 and LM4040-N-2.5 to 100µA for the 10V LM4040-N. All versions have a maximum operating current of 15mA.

LM4040-Ns in the SOT-23 packages have a parasitic Schottky diode between pin 2 (–) and pin 3 (Die attach interface contact). Therefore, pin 3 of the SOT-23 package must be left floating or connected to pin 2.

LM4040-Ns in the SC70 have a parasitic Schottky diode between pin 1 (–) and pin 2 (Die attach interface contact). Therefore, pin 2 must be left floating or connected to pin 1.

The 4.096V version allows single 5V 12-bit ADCs or DACs to operate with an LSB equal to 1mV. For 12-bit ADCs or DACs that operate on supplies of 10V or greater, the 8.192V version gives 2mV per LSB.

The typical thermal hysteresis specification is defined as the change in 25°C voltage measured after thermal cycling. The device is thermal cycled to temperature –40°C and then measured at 25°C. Next the device is thermal cycled to temperature 125°C and again measured at 25°C. The resulting  $V_{OUT}$  delta shift between the 25°C measurements is thermal hysteresis. Thermal hysteresis is common in precision references and is induced by thermal-mechanical package stress. Changes in environmental storage temperature, operating temperature and board mounting temperature are all factors that can contribute to thermal hysteresis.

In a conventional shunt regulator application ([Figure 8-1](#)), an external series resistor ( $R_S$ ) is connected between the supply voltage and the LM4040-N.  $R_S$  determines the current that flows through the load ( $I_L$ ) and the LM4040-N ( $I_Q$ ). Since load current and supply voltage may vary,  $R_S$  must be small enough to supply at least the minimum acceptable  $I_Q$  to the LM4040-N even when the supply voltage is at its minimum and the load current is at its maximum value. When the supply voltage is at its maximum and  $I_L$  is at its minimum,  $R_S$  must be large enough so that the current flowing through the LM4040-N is less than 15mA.

$R_S$  is determined by the supply voltage, ( $V_S$ ), the load and operating current, ( $I_L$  and  $I_Q$ ), and the LM4040-N's reverse breakdown voltage,  $V_R$ .

$$R_S = \frac{V_S - V_R}{I_L + I_Q} \quad (1)$$

## 8.2 Typical Applications

### 8.2.1 Shunt Regulator

Figure 8-1. Shunt Regulator Schematic

### 8.2.1.1 Design Requirements

$$V_{IN} > V_{OUT}$$

Select  $R_S$  such that:

$$I_{RMIN} < I_R < I_{RMAX} \text{ where } I_{RMAX} = 15\text{mA}$$

See [Section 5.5](#)

for minimum operating current for each voltage option and grade.

### 8.2.1.2 Detailed Design Procedure

The resistor  $R_S$  must be selected such that current  $I_R$  will remain in the operational region of the part for the entire  $V_{IN}$  range and load current range. The two extremes to consider are  $V_{IN}$  at its minimum, and the load at its maximum, where  $R_S$  must be small enough for  $I_R$  to remain above  $I_{RMIN}$ . The other extreme is  $V_{IN}$  at its maximum, and the load at its minimum, where  $R_S$  must be large enough to maintain  $I_R < I_{RMAX}$ . For most designs,  $0.1\text{mA} \leq I_R \leq 1\text{mA}$  is a good starting point.

Use [Equation 2](#) and [Equation 3](#) to set  $R_S$  between  $R_{S\_MIN}$  and  $R_{S\_MAX}$ .

$$R_{S\_MIN} = \frac{V_{IN\_MAX} - V_{OUT}}{I_{LOAD\_MIN} + I_{R\_MAX}} \tag{2}$$

$$R_{S\_MAX} = \frac{V_{IN\_MIN} - V_{OUT}}{I_{LOAD\_MAX} + I_{R\_MIN}} \tag{3}$$

### 8.2.1.3 Application Curve

**Figure 8-2. Reverse Characteristics And Minimum Operating Current**

### 8.2.2 4.1V ADC Application

\*\*Ceramic monolithic \*Tantalum

**Figure 8-3. 4.1V LM4040-N'S Nominal 4.096 Breakdown Voltage Gives ADC12451 1 MV/LSB**

#### 8.2.2.1 Design Requirements

The only design requirement is for an output voltage of 4.096V.

#### 8.2.2.2 Detailed Design Procedure

Using an LM4040-4.1, select an appropriate  $R_S$  to sufficiently power the device. Set the target  $I_R$  for 1mA. With an input voltage of 5V, the resistor can be calculated:

$$R = \frac{5\text{ V} - 4.096\text{ V}}{1\text{ mA}} = 904\ \Omega \quad (4)$$

The closest available resistance of 909  $\Omega$  is used here, which in turn yields an  $I_R$  of 994 $\mu$ A.

### 8.2.3 Bounded Amplifier

Nominal clamping voltage is  $\pm 11.5\text{V}$  (LM4040-N's reverse breakdown voltage +2 diode  $V_F$ ).

**Figure 8-4. Bounded Amplifier Reduces Saturation-Induced Delays and Can Prevent Succeeding Stage Damage**

#### 8.2.3.1 Design Requirements

Design an amplifier with output clamped at  $\pm 11.5\text{V}$ .

#### 8.2.3.2 Detailed Design Procedure

With amplifier rails of  $\pm 15\text{V}$ , the output can be bound to  $\pm 11.5\text{V}$  with the LM4040-10 and two nominal diode voltage drops of  $0.7\text{V}$ .

$$V_{\text{OUTBound}} = 2 \times V_{\text{FWD}} + V_Z \quad (5)$$

$$V_{\text{OUTBound}} = 1.4\text{V} + 10\text{V} \quad (6)$$

Select  $R_S = 15\text{k}\Omega$  to keep  $I_R$  low. Calculate  $I_R$  to confirm  $R_S$  selection.

$$I_R = (V_{\text{IN}} - V_{\text{OUT}}) / R, \text{ however in this case, the negative supply must be taken into account.} \quad (7)$$

$$I_R = (V_{\text{IN+}} - V_{\text{IN-}} - V_{\text{OUT}}) / R = (30\text{V} - 10\text{V}) / (R_{S1} + R_{S2}) = 20\text{V} / 30\text{k}\Omega = 0.667\text{mA} \quad (8)$$

This is an acceptable value for  $I_R$  that does not draw excessive current, but prevents the part from being starved for current.

## 8.2.4 Protecting Op-Amp Input

The bounding voltage is  $\pm 4$  V with the 2.5V LM4040-N (LM4040-N's reverse breakdown voltage + 3 diode  $V_F$ ).

**Figure 8-5. Protecting Op Amp Input**

### 8.2.4.1 Design Requirements

Limit the input voltage to the op-amp to  $\pm 4$  V.

### 8.2.4.2 Detailed Design Procedure

Similar to [Section 8.2.3](#), this design uses a LM4040-2.5 and three forward diode voltage drops to create a voltage clamp. The procedure for selecting the  $R_S$  resistors, in this case 5k $\Omega$ , is the same as [Section 8.2.3.2](#).

$$I_R = (V_{IN+} - V_{IN-} - V_{OUT}) / R = (10V - 2.5V) / (R_{S1} + R_{S2}) = 7.5V / 10k\Omega = 0.750mA \quad (9)$$

### 8.2.5 Precision $\pm 4.096\text{-V}$ Reference

**Figure 8-6. Precision  $\pm 4.096\text{-V}$  Reference**

#### 8.2.5.1 Design Requirements

Use a single voltage reference to create positive and negative reference rails,  $\pm 4.096\text{V}$ .

#### 8.2.5.2 Detailed Design Procedure

The procedure for selecting the  $R_S$  resistor is same as detailed in [Section 8.2.2.2](#). The output of the voltage reference is used as the inverting input to the op-amp, with unity gain.

## 8.2.6 Precision Current Sink/Source

Figure 8-7. Precision 1mA Current Sink

Figure 8-8. Precision 1mA Current Source

### 8.2.6.1 Design Requirements

Create precision 1mA current sink and/or 1mA current source.

### 8.2.6.2 Detailed Design Procedure

Set R1 such that the current through the shunt reference,  $I_R$ , is greater than  $I_{RMIN}$ .

$I_{OUT} = V_{OUT} / R_2$  where  $V_{OUT}$  is the voltage drop across the shunt reference. In this case,

$$I_{OUT} = 2.5 / R_2$$

## 8.3 Power Supply Recommendations

While a bypass capacitor is not required on the input voltage line, TI recommends reducing noise on the input which could affect the output. A 0.1  $\mu$ F ceramic capacitor or larger is recommended.

## 8.4 Layout

### 8.4.1 Layout Guidelines

Place external components as close to the device as possible. Place RS close the cathode, as well as the input bypass capacitor, if used.

### 8.4.2 Layout Example

Figure 8-9. Layout Diagram

## 9 Device and Documentation Support

### 9.1 Documentation Support

#### 9.1.1 Related Documentation

For related documentation, see the following:

- [Absolute Maximum Ratings for Soldering Application Report](#) (SNOA549)
- [LM4041-N/LM4041-N-Q1 Precision Micropower Shunt Voltage Reference](#) (SNOS641)

### 9.2 Related Links

The table below lists quick access links. Categories include technical documents, support and community resources, tools and software, and quick access to order now.

**Table 9-1. Related Links**

### 9.3 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](#). Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 9.4 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

### 9.5 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

### 9.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 9.7 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

## 10 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

<b>Changes from Revision K (June 2016) to Revision L (June 2024)</b>	<b>Page</b>
• Updated the numbering format for tables, figures, and cross-references throughout the document.....	1
• Updated pinout diagrams.....	3
• Removed soldering information from the <i>Absolute Maximum Ratings</i> table .....	4

---

<b>Changes from Revision J (August 2015) to Revision K (June 2016)</b>	<b>Page</b>
• Updated pinout diagrams .....	3

---

<b>Changes from Revision I (April 2015) to Revision J (August 2015)</b>	<b>Page</b>
• Added <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> section, <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section .....	1

---

<b>Changes from Revision H (April 2013) to Revision I (April 2015)</b>	<b>Page</b>
• Added some of the latest inclusions from new TI formatting and made available of the automotive grade for the SOT-23 package.....	1

---

<b>Changes from Revision G (July 2012) to Revision H (April 2013)</b>	<b>Page</b>
• Changed layout of National Data Sheet to TI format.....	1

---

## 11 Mechanical, Packaging, And Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

### 11.1 SOT-23 and SC70 Package Marking Information

Only three fields of marking are possible on the SOT-23's and SC70's small surface. This table gives the meaning of the three fields.

First Field:

R = Reference

Second Field: Voltage Option

J = 2.048V Voltage Option

2 = 2.5V Voltage Option

K = 3V Voltage Option

4 = 4.096V Voltage Option

5 = 5V Voltage Option

8 = 8.192V Voltage Option

0 = 10V Voltage Option

Third Field: Initial Reverse Breakdown Voltage or Reference Voltage Tolerance

A =  $\pm 0.1\%$

B =  $\pm 0.2\%$

C =  $+0.5\%$

D =  $\pm 1.0\%$

E =  $\pm 2.0\%$

PART MARKING	FIELD DEFINITION
RJA (SOT-23 only)	Reference, 2.048V, $\pm 0.1\%$
R2A (SOT-23 only)	Reference, 2.5V, $\pm 0.1\%$
RKA (SOT-23 only)	Reference, 3V, $\pm 0.1\%$
R4A (SOT-23 only)	Reference, 4.096V, $\pm 0.1\%$
R5A (SOT-23 only)	Reference, 5V, $\pm 0.1\%$
R8A (SOT-23 only)	Reference, 8.192V, $\pm 0.1\%$
R0A (SOT-23 only)	Reference, 10V, $\pm 0.1\%$
RJB	Reference, 2.048V, $\pm 0.2\%$
R2B	Reference, 2.5V, $\pm 0.2\%$
RKB	Reference, 3V, $\pm 0.2\%$
R4B	Reference, 4.096V, $\pm 0.2\%$
R5B	Reference, 5V, $\pm 0.2\%$
R8B (SOT-23 only)	Reference, 8.192V, $\pm 0.2\%$
R0B (SOT-23 only)	Reference, 10V, $\pm 0.2\%$
RJC	Reference, 2.048V, $\pm 0.5\%$
R2C	Reference, 2.5V, $\pm 0.5\%$
RKC	Reference, 3V, $\pm 0.5\%$

PART MARKING	FIELD DEFINITION
R4C	Reference, 4.096V, $\pm 0.5\%$
R5C	Reference, 5V, $\pm 0.5\%$
R8C (SOT-23 only)	Reference, 8.192V, $\pm 0.5\%$
R0C (SOT-23 only)	Reference, 10V, $\pm 0.5\%$
RJD	Reference, 2.048V, $\pm 1.0\%$
R2D	Reference, 2.5V, $\pm 1.0\%$
RKD	Reference, 3V, $\pm 1.0\%$
R4D	Reference, 4.096V, $\pm 1.0\%$
R5D	Reference, 5V, $\pm 1.0\%$
R8D (SOT-23 only)	Reference, 8.192V, $\pm 1.0\%$
R0D (SOT-23 only)	Reference, 10V, $\pm 1.0\%$
RJE	Reference, 2.048V, $\pm 2.0\%$
R2E	Reference, 2.5V, $\pm 2.0\%$
RKE	Reference, 3V, $\pm 2.0\%$

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

- (3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF LM4040-N, LM4040-N-Q1 :**

- Catalog : [LM4040-N](#)
- Automotive : [LM4040-N-Q1](#)

NOTE: Qualified Version Definitions:

- Catalog - TI's standard catalog product
- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects

# DBZ0003A

## PACKAGE OUTLINE

SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR

4214838/F 08/2024

### NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC registration TO-236, except minimum foot length.
4. Support pin may differ or may not be present.
5. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.25mm per side

# EXAMPLE BOARD LAYOUT

DBZ0003A

SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR

LAND PATTERN EXAMPLE  
SCALE:15X

SOLDER MASK DETAILS

4214838/F 08/2024

NOTES: (continued)

5. Publication IPC-7351 may have alternate designs.
6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

# EXAMPLE STENCIL DESIGN

DBZ0003A

SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR

SOLDER PASTE EXAMPLE  
BASED ON 0.125 THICK STENCIL  
SCALE:15X

4214838/F 08/2024

NOTES: (continued)

7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
8. Board assembly site may have different recommendations for stencil design.

# DCK0005A

# PACKAGE OUTLINE

SOT - 1.1 max height

SMALL OUTLINE TRANSISTOR

4214834/G 11/2024

## NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC MO-203.
4. Support pin may differ or may not be present.
5. Lead width does not comply with JEDEC.
6. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.25mm per side

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Lead dimensions are not controlled within this area.
4. Reference JEDEC TO-226, variation AA.
5. Shipping method:
  - a. Straight lead option available in bulk pack only.
  - b. Formed lead option available in tape and reel or ammo pack.
  - c. Specific products can be offered in limited combinations of shipping medium and lead options.
  - d. Consult product folder for more information on available options.
