

## SNx4HCT273 Octal D-Type Flip-Flops With Clear

### **1** Features

- Operating voltage range of 4.5V to 5.5V
- · Outputs can drive up to 10 LSTTL loads
- Low power consumption, 80µA maximum I<sub>CC</sub>
- Typical t<sub>pd</sub> = 12ns
- ±4mA output drive at 5V
- Low input current of 1µA maximum
- Inputs are TTL-voltage compatible
- Contain eight D-type flip-flops
- Direct clear input

### 2 Applications

- Buffer or storage registers
- Shift registers
- Pattern generators

### **3 Description**

These devices are positive-edge-triggered D-type flipflops with a common enable input. The 'HCT273 devices are similar to the 'HCT377 devices, but feature a common clear enable ( $\overline{CLR}$ ) input instead of a latched clock.

## **5** Specifications

### 5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|                  |  |  | MIN  | MAX | UNIT |
|------------------|--|--|------|-----|------|
| V <sub>CC</sub>  | Supply voltage range                             |  | -0.5 | 7   | V    |
| I <sub>IK</sub>  | Input clamp current <sup>(2)</sup>               | $V_{I} < 0 \text{ or } V_{I} > V_{CC}$ |      | ±20 | mA   |
| I <sub>OK</sub>  | Output clamp current <sup>(2)</sup>              | $V_{O}$ < 0 or $V_{O}$ > $V_{CC}$      |      | ±20 | mA   |
| I <sub>O</sub>   | Continuous output current                        | $V_{O} = 0$ to $V_{CC}$                |      | ±25 | mA   |
|                  | Continuous current through V <sub>CC</sub> or GN | ID                                     |      | ±50 | mA   |
| TJ               | Junction temperature                             |  |      | 150 | °C   |
| T <sub>stg</sub> | Storage temperature range                        |  | -65  | 150 | °C   |

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### **5.2 Recommended Operating Conditions**

over recommended operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|                 |                                  |                                  | SN54HCT273 <sup>(2)</sup> SN74HCT |     | 74HCT27         | 3   | UNIT |          |      |
|-----------------|----------------------------------|----------------------------------|-----------------------------------|-----|-----------------|-----|------|----------|------|
|                 |                                  |                                  | MIN                               | NOM | MAX             | MIN | NOM  | MAX      | ONIT |
| V <sub>CC</sub> | Supply voltage                   |                                  | 4.5                               | 5   | 5.5             | 4.5 | 5    | 5.5      | V    |
| VIH             | High-level input voltage         | $V_{CC}$ = 4.5 V to 5.5 V        | 2                                 |     |                 | 2   |      |          | V    |
| VIL             | Low-level input voltage          | V <sub>CC</sub> = 4.5 V to 5.5 V |                                   |     | 0.8             |     |      | 0.8      | V    |
| VI              | Input voltage                    |                                  | 0                                 |     | V <sub>CC</sub> | 0   |      | $V_{CC}$ | V    |
| Vo              | Output voltage                   | Output voltage                   |                                   |     | V <sub>CC</sub> | 0   |      | $V_{CC}$ | V    |
| Δt/Δv           | Input transition rise or fall ra | te                               |                                   |     | 500             |     |      | 500      | ns/V |
| T <sub>A</sub>  | Operating free-air temperate     | lre                              | -40                               |     | 125             | -40 |      | 85       | °C   |

 All unused inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. Refer to the TI application report, Implications of Slow or Floating CMOS Inputs, literature number SCBA004.

|-----------------|-------------------------------|-----------------|-----|------|
| C <sub>pd</sub> | Power dissipation capacitance | No load         | 30  | pF   |

### 6 Parameter Measurement Information

Phase relationships between waveforms were chosen arbitrarily. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  1MHz, Z<sub>O</sub> = 50 $\Omega$ , t<sub>t</sub> < 6ns.

For clock inputs,  $f_{max}$  is measured when the input duty cycle is 50%.

The outputs are measured one at a time with one input transition per measurement.

(1) The greater between  $t_{\mathsf{PLH}}$  and  $t_{\mathsf{PHL}}$  is the same as  $t_{\mathsf{pd}}.$

### 7 Detailed Description

#### 7.1 Overview

These devices are positive-edge-triggered D-type flip-flops with a common enable input. The 'HCT273 devices are similar to the 'HCT377 devices, but feature a common clear enable ( $\overline{\text{CLR}}$ ) input instead of a latched clock.

Information at the data (D) inputs meeting the setup time requirements is transferred to the Q outputs on the positive-going edge of the clock (CLK) pulse. Clock triggering occurs at a particular voltage level and is not directly related to the positive-going pulse. When CLK is at either the high or low level, the D input has no effect at the output. The circuits are designed to prevent false clocking by transitions at  $\overline{CLR}$ .

### 8 Application and Implementation

#### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

#### 8.1 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the *Recommended Operating Conditions*. Each  $V_{CC}$  terminal should have a good bypass capacitor to prevent power disturbance. A 0.1µF capacitor is recommended for this device. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. The 0.1µF and 1µF capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for best results.

#### 8.2 Layout

#### 8.2.1 Layout Guidelines

When using multiple-input and multiple-channel logic devices, inputs must never be left floating. In many cases, functions or parts of functions of digital logic devices are unused; for example, when only two inputs of a triple-input AND gate are used or only 3 of the 4 buffer gates are used. Such unused input pins must not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. All unused inputs of digital logic devices must be connected to a logic high or logic low voltage, as defined by the input voltage specifications, to prevent them from floating. The logic level that must be applied to any particular unused input depends on the function of the device. Generally, the inputs are tied to GND or  $V_{CC}$ , whichever makes more sense for the logic function or is more convenient.

### 9 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

#### 9.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

#### 9.2 Support Resources

TI E2E<sup>™</sup> support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

#### 9.3 Trademarks

TI E2E<sup>™</sup> is a trademark of Texas Instruments. All trademarks are the property of their respective owners.

#### 9.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

#### 9.5 Glossary

TI Glossary This glossary lists and explains terms, acronyms, and definitions.

### 10 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

| С | hanges from Revision G (July 2022) to Revision H (February 2025)                 | Page |
|---|--|------|
| • | Added package size to Device Information table                                   | 1    |
| • | Added Pin Function table to Pin Configuration and Functions section              |      |
| • | Updated operating free-air temperature in Recommended Operating Conditions table |      |

| С | Changes from Revision F (February 2022) to Revision G (July 2022) Page                            |        |  |  |  |  |  |  |
|---|---|--------|--|--|--|--|--|--|
| • | Junction-to-ambient thermal resistance values increased. DW was 58 is now 109.1, DB was 70 is now | 122.7, |  |  |  |  |  |  |
|   | N was 69 is now 84.6, NS was 60 is now 113.4, PW was 83 is now 131.8                              | 4      |  |  |  |  |  |  |

### 11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

<sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

<sup>(4)</sup> There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

<sup>(5)</sup> Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

## PACKAGE OPTION ADDENDUM

<sup>(6)</sup> Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

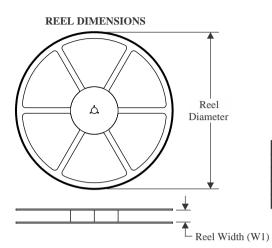

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

NOTES:

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M. 2. This drawing is subject to change without notice. 3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not
- exceed 0.15 mm per side.
- 4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.
- 5. Reference JEDEC registration MO-153.

## PW0020A

## **EXAMPLE BOARD LAYOUT**

## TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

## PW0020A

## **EXAMPLE STENCIL DESIGN**

## TSSOP - 1.2 mm max height
