

User's Guide

LM5168FEVM EVM User's Guide

ABSTRACT

The LM5168FEVM is a 115-V DC/DC fly-buck regulator that employs synchronous rectification to achieve high conversion efficiency in a small footprint. The EVM operates over a wide input voltage range of 20 V to 115 V (120-V absolute maximum) to provide a regulated 10-V output at up to 0.25 A with a 750-kHz switching frequency. An additional 10-V floating output is provided through the fly-buck topology. The output voltage has better than 1.5% set-point accuracy and is adjustable using an external resistor divider. The module design uses the LM5168F-Q1 synchronous buck converter with wide input voltage range, wide duty-cycle range, integrated high-side and low-side power MOSFETs, advanced overcurrent protection, and precision enable. With AEC-Q100 grade 1 automotive qualification, the LM5168F-Q1 is rated to operate over a junction temperature range of -40°C to $+150^{\circ}\text{C}$.

1 General TI High Voltage Evaluation User Safety Guidelines

Always follow TI's set-up and application instructions, including use of all interface components within their recommended electrical rated voltage and power limits. Always use electrical safety precautions to help ensure your personal safety and the safety of those working around you. Contact TI's Product Information Center <http://support.ti.com> for further information.

Save all warnings and instructions for future reference.

Failure to follow warnings and instructions may result in personal injury, property damage, or death due to electrical shock and/or burn hazards.

The term TI HV EVM refers to an electronic device typically provided as an open-framed, unenclosed printed-circuit board assembly. It is intended strictly for use in development laboratory environments, solely for qualified professional users having training, expertise, and knowledge of electrical safety risks in development and application of high-voltage electrical circuits. Any other use and/or application are strictly prohibited by Texas Instruments. If you are not suitably qualified, you should immediately stop from further use of the HV EVM.

- **Work Area Safety:**

- Maintain a clean and orderly work area.
- A qualified observer or observers must be present any time circuits are energized.
- Effective barriers and signage must be present in the area where the TI HV EVM and its interface electronics are energized, indicating operation of accessible high voltages can be present, for the purpose of protecting inadvertent access.
- All interface circuits, power supplies, evaluation modules, instruments, meters, scopes, and other related apparatus used in a development environment exceeding 50 V_{RMS}/75 VDC must be electrically located within a protected Emergency Power Off (EPO) protected power strip.
- Use a stable and non-conductive work surface.
- Use adequately insulated clamps and wires to attach measurement probes and instruments. No freehand testing whenever possible.

- **Electrical Safety:**

As a precautionary measure, it is always a good engineering practice to assume that the entire EVM can have fully accessible and active high voltages.

- De-energize the TI HV EVM and all its inputs, outputs, and electrical loads before performing any electrical or other diagnostic measurements. Confirm that TI HV EVM power has been safely de-energized.
- With the EVM confirmed de-energized, proceed with required electrical circuit configurations, wiring, measurement equipment hook-ups, and other application needs, while still assuming the EVM circuit and measuring instruments are electrically live.
- When EVM readiness is complete, energize the EVM as intended.

WARNING

WARNING: While the EVM is energized, never touch the EVM or its electrical circuits as they could be at high voltages capable of causing electrical shock hazard.

• Personal Safety:

- Wear personal protective equipment, for example, latex gloves, safety glasses with side shields, or both, or protect EVM in an adequate lucent plastic box with interlocks from accidental touch.

• Limitation for Safe Use:

- EVMs are not to be used as all or part of a production unit.

Safety and Precautions

The EVM is designed for professionals who have received the appropriate technical training, and is designed to operate from an AC power supply or a high-voltage DC supply. Please read this user's guide and the safety-related documents that come with the EVM package before operating this EVM.

CAUTION

Do not leave the EVM powered when unattended.

WARNING

Hot surface! Contact may cause burns. Do not touch!

WARNING

High Voltage! Electric shock is possible when connecting board to live wire. Board should be handled with care by a professional.

For safety, use of isolated test equipment with overvoltage and overcurrent protection is highly recommended.

2 EVM Characteristics

Unless otherwise specified, the following conditions apply: $T_A = 25^\circ\text{C}$, $I_{\text{OUT1}} = \text{primary output current}$, $I_{\text{OUT2}} = \text{secondary output current}$

Table 2-1. LM5168FQEVM Electrical Performance Characteristics

| Parameter | Test Conditions | MIN | TYP | MAX | UNITS |
|---|--|--|------|-----|---------------|
| INPUT CHARACTERISTICS | | | | | |
| Input voltage range, V_{IN} | EVM input voltage operating range | 20 | 48 | 115 | V |
| Input voltage turn-on, $V_{\text{IN(ON)}}$ | Adjusted by EN/UVLO resistors | 6.0 | | | V |
| Input voltage turn-off, $V_{\text{IN(OFF)}}$ | | 5.6 | | | V |
| Input voltage hysteresis, $V_{\text{IN(HYS)}}$ | | 0.4 | | | V |
| Input current, no load, $I_{\text{IN(NL)}}$ | $I_{\text{OUT}} = 0 \text{ A}$ | $V_{\text{IN}} = 48 \text{ V}$ | 13 | | mA |
| Input current, disabled, $I_{\text{IN(OFF)}}$ | $V_{\text{EN/UVLO}} = 0 \text{ V}$, no EN divider | $V_{\text{IN}} = 36 \text{ V}$ | 10 | | μA |

| Output voltage, V_{OUT2} | $V_{\text{IN}} = 48 \text{ V}$, $I_{\text{OUT1}} = 0 \text{ A}$, $I_{\text{OUT2}} = 0 \text{ A}$ | 10.0 | | | |
| Output current, I_{OUT1} | $V_{\text{IN}} = 48 \text{ V}$, $I_{\text{OUT2}} = 0 \text{ A}$ | 0.25 | | | A |
| Output current, I_{OUT2} | $V_{\text{IN}} = 48 \text{ V}$, $I_{\text{OUT1}} = 0 \text{ A}$ | 0.25 | | | A |
| Output voltage regulation, ΔV_{OUT1} | Load regulation, $V_{\text{IN}} = 48 \text{ V}$ | $I_{\text{OUT1}} = 0 \text{ A}$ to 0.25 A, $I_{\text{OUT2}} = 0 \text{ A}$ | 1 | | mV |
| Output voltage regulation, ΔV_{OUT2} | Load regulation, $V_{\text{IN}} = 48 \text{ V}$ | $I_{\text{OUT1}} = 0 \text{ A}$ to 0.25 A, $I_{\text{OUT2}} = 0 \text{ A}$ | 200 | | |
| Output voltage regulation, ΔV_{OUT1} | Load regulation, $V_{\text{IN}} = 48 \text{ V}$ | $I_{\text{OUT2}} = 0 \text{ A}$ to 0.25 A, $I_{\text{OUT1}} = 0 \text{ A}$ | 7 | | |
| Output voltage regulation, ΔV_{OUT2} | Load regulation, $V_{\text{IN}} = 48 \text{ V}$ | $I_{\text{OUT2}} = 0 \text{ A}$ to 0.25 A, $I_{\text{OUT1}} = 0 \text{ A}$ | 1000 | | |
| Output voltage regulation, ΔV_{OUT1} | Line regulation, $I_{\text{OUT1}} = I_{\text{OUT2}} = 0 \text{ A}$ | $V_{\text{IN}} = 24 \text{ V}$ to 115 V | 50 | | |
| Output voltage regulation, ΔV_{OUT2} | Line regulation, $I_{\text{OUT1}} = I_{\text{OUT2}} = 0 \text{ A}$ | $V_{\text{IN}} = 24 \text{ V}$ to 115 V | 750 | | |
| Maximum output current from primary output | $V_{\text{IN}} = 48 \text{ V}$, $I_{\text{OUT2}} = 0 \text{ A}$ | 0.27 | | | A |
| Soft-start time, t_{SS} | | 3.5 | | | ms |
| SYSTEM CHARACTERISTICS | | | | | |
| Switching frequency | $V_{\text{IN}} = 36 \text{ V}$, $I_{\text{OUT1}} = 0 \text{ A}$, $I_{\text{OUT2}} = 0 \text{ A}$ | 730 | | | kHz |
| Half-load efficiency | $I_{\text{OUT1}} = I_{\text{OUT2}} = 0.08 \text{ A}$ | $V_{\text{IN}} = 48 \text{ V}$ | 70% | | |
| Full load efficiency | $I_{\text{OUT1}} = I_{\text{OUT2}} = 0.125 \text{ A}$ | $V_{\text{IN}} = 48 \text{ V}$ | 76% | | |
| | | $V_{\text{IN}} = 60 \text{ V}$ | 72% | | |

3 LM5168FEVM Evaluation Module

The LM5168FEVM is configured to deliver a regulated 10-V output, 0.25 A at 750-kHz switching frequency, and an additional 10-V floating output. The LM5168 uses a COT control architecture, with input voltage feedforward to provide a constant frequency regulator with tightly regulated output voltage. This type of control requires adequate voltage ripple at the FB input to achieve stable regulation. The LM5168FEVM is set up with type III ripple injection to minimize the output voltage ripple while ensuring a stable regulator. The LM5168FEVM also provides the option to use type I or type II ripple injection. See the [LM516x-Q1 0.65/0.3-A, 120-V Step-Down Converter w/ Fly-Buck Converter Capability Data Sheet](#) for more information. An overall view of the LM516FEVM and the schematic are shown in [Figure 3-1](#) and [Figure 4-1](#), respectively.

3.1 Quick Start Procedure

1. Connect the input voltage supply to the VIN connector (+ and -).
2. Connect the load or loads to the VOUT and the VOUT2 connectors (+ and -).
3. Set the input supply voltage to an appropriate level between 20 V to 115 V.
4. Turn on the power supply. The EVM powers up and provides $V_{OUT} = 10$ V, and $V_{OUT2} = 10$ V.

See [Figure 3-1](#) for the location of the connectors.

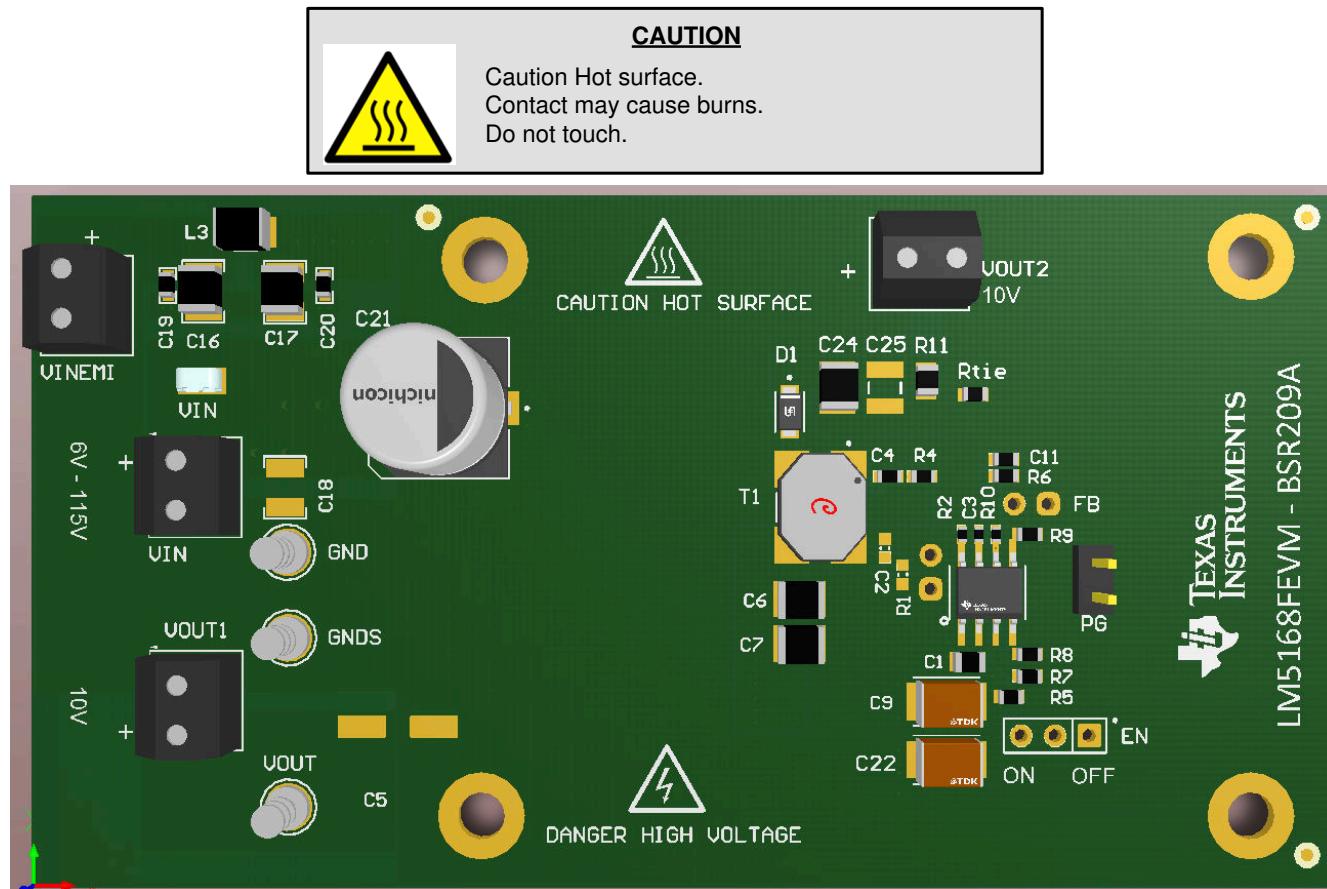

Figure 3-1. LM5168FEVM Top View

3.2 Detailed Descriptions

This section describes the connectors and the test points on the EVM and how to properly connect, set up, and use the LM5168FEVM EVM. See [Figure 3-1](#) for location of connectors and jumpers.

| | |
|---------------------|--|
| VOUT | Output voltage of the converter |
| | VOUT screw terminal connector. Apply load to this connector (+ and -). The VOUT test point is used to monitor output voltage. |
| VOUT2 | Secondary output voltage of the converter |
| | VOUT2 screw terminal connector. One side of this output is connected to the primary ground (GND) through a tie resistor, R_{tie} (R12). This resistor can be removed for a true floating voltage source. Apply load to this connector (+ and -). |
| GND | Ground of the converter |
| | GND and GNDS test points. Used as ground test points for the EVM. |
| VIN | Input voltage to the converter |
| | VIN screw terminal connector. Apply input voltage to this connector (+ and -). The VIN test point is used to monitor input voltage. |
| VINEMI | Input voltage to input filter of the converter |
| | If it is desired to use the built-in EMI filter on the EVM, then connect the input supply to the VINEMI screw terminal connector (+ and -). |
| Input Filter | EMI mitigation |
| | An input EMI filter is provided on the EVM. Note L2 and C18 are not populated and must be installed for the EMI filter to operate. Also, note that the maximum input voltage to the filter is 100 V_{DC} . |
| EN/UVLO | Set EN/UVLO pin options |
| Jumper | <p>Use this jumper to enable/disable the EVM. The resistors connected to this pin set the input UVLO thresholds. Input UVLO thresholds are set to approximately 6 V and 5.6 V. These levels can be changed by changing the values of R5 and R7. For external control of the device, these resistors should be removed and the control signal applied to the center pin of the header. Note that for accurate shutdown current measurement, these resistors must also be removed and the EN input (center pin) grounded.</p> <ol style="list-style-type: none"> 1. Jumper open (default setup): Device starts up and shuts down with UVLO. 2. Center pin connected to ON: Device starts up and shuts down without UVLO. 3. Center pin connected to OFF: Device is off. |
| PGOOD | The PGOOD header used as a test point to monitor the power-good indicator. This flag indicates whether the output voltage has reached its regulation level. PGOOD is an open-drain output that is tied to V_{OUT} through a 100-k Ω , resistor R ₁₀ . |

4 Schematic

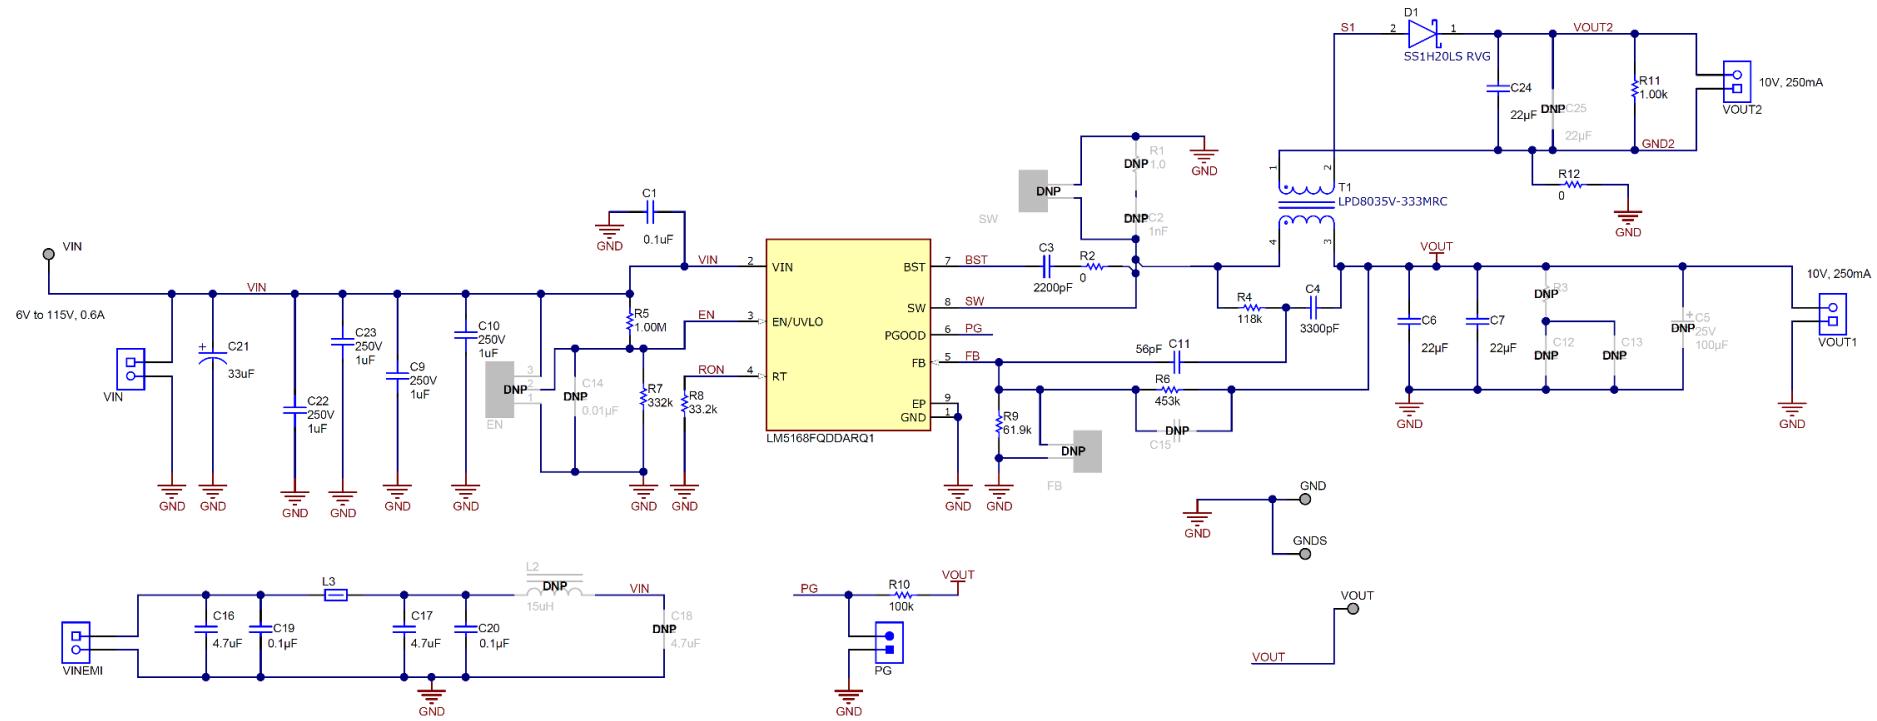

Figure 4-1. LM5168FEVM Schematic

5 PCB Layout

Figure 5-1 through Figure 5-4 show the board layout for the LM5168FEVM.

The 8-pin SO PowerPAD™ package offers an exposed thermal pad, which must be soldered to the copper landing on the PCB for optimal thermal performance. The PCB consists of a 4-layer design. There are 2-oz copper planes on the top and bottom and 1-oz copper mid-layer planes to dissipate heat with an array of thermal vias under the thermal pad to connect to all four layers.
