

# ***AWR2544 Technical Reference Manual***

## ***Technical Reference Manual***

---

Literature Number: SWRU611A  
JANUARY 2024 – REVISED MAY 2025

# Table of Contents

<b>1 Introduction</b>	13
1.1 Device Overview	13
1.2 Device Block Diagram	15
<b>2 Memory Map</b>	17
2.1 Main Subsystem Cortex R5F Memory Map	17
2.2 Radar Subsystem Memory Map	19
<b>3 System Interconnect</b>	22
3.1 Main Subsystem R5F Infrastructure	22
3.2 DSP Subsystem C66x Infrastructure	24
3.3 Radar Subsystem Infrastructure	27
3.4 Peripheral Central Resource (PCR)	27
3.4.1 MSS_PCR1 Registers	31
3.4.2 MSS_PCR2 Registers	343
3.4.3 DSS_PCR Registers	655
<b>4 Device Initialization</b>	967
4.2 Boot Process	967
4.2.1 ROM Code Overview	967
4.2.2 Boot Modes	967
4.2.3 SOP Mode Pins	968
4.2.4 BOOT-ROM Architecture (RBL)	968
4.2.5 R5F SBL Loading	969
<b>5 Device Configuration</b>	971
5.1 Overview	971
5.2 Control Registers	971
5.2.1 MSS_TOPRCM Registers	972
5.2.2 MSS_RCM Registers	1146
5.2.3 DSS_RCM Registers	1301
5.2.4 RSS_RCM Registers	1349
5.2.5 DSS_CTRL Registers	1387
5.2.6 RSS_CTRL Registers	1456
5.2.7 MSS_CTRL Registers	1698
5.2.8 MSS_IOMUX Registers	1988
5.2.9 TOP_CTRL Registers	2116
5.2.10 RSS_PROC_CTRL Registers	2229
5.2.11 DSP_ICFG Registers	2313
5.3 Device Clock Architecture	2481
5.3.1 Clock Overview	2481
5.3.2 Root Clocks	2483
5.3.3 External Clocks	2484
5.3.4 Clock Selection	2485
5.3.5 Analog Modules	2492
5.4 HS Divider Programming Sequence	2494
5.5 M2 and N2 Change On-the-Fly	2494
5.6 Clock Register Details	2494
5.7 Ethernet Clock	2495
5.8 Memory Protection Unit (MPU) and Firewalls	2496
5.8.1 Functional Operation	2496
5.8.2 Firewalls	2497
5.8.3 ID Allocation	2499

5.8.4 Memory Map (MPU).....	2500
5.9 Power Domains.....	2504
5.9.1 DSP Subsystem L3 Power Domain.....	2505
5.9.2 MSS L2 Power Domain.....	2505
5.10 Resets.....	2507
5.11 Temperature Sensor.....	2509
<b>6 Processors and Accelerators.....</b>	<b>2510</b>
6.1 Main Subsystem Cortex R5F.....	2510
6.1.1 Main ARM SubSystem Features.....	2510
6.1.2 TCM Initialization.....	2511
6.1.3 Resets.....	2511
6.1.4 MSS_CCMR Registers.....	2513
6.2 Radar Processing Hardware Accelerator.....	2520
6.2.1 Radar Accelerator Features Overview.....	2520
6.2.2 Radar Accelerator Architecture.....	2521
6.3 Radar Subsystem.....	2521
6.3.1 BIST Subsystem.....	2521
6.3.2 Clock Subsystem.....	2526
6.3.3 Transmit Subsystem.....	2527
6.3.4 Receive Subsystem.....	2528
6.3.5 Real(I-only) Receiver in AWR2544 .....	2528
<b>7 Interrupts.....</b>	<b>2530</b>
7.1 Main Subsystem Cortex R5F Interrupt Map.....	2530
7.2 Main Subsystem ESM Interrupt Map.....	2535
<b>8 ADC Buffer.....</b>	<b>2542</b>
8.1 Functional Description.....	2542
8.1.1 DFE Data Write Operation.....	2542
8.1.2 Test Pattern Generator Support.....	2544
8.1.3 ADC Buffer Data Formats.....	2544
<b>9 Ethernet SubSystem (MCU_CPSW0).....</b>	<b>2545</b>
9.1 MCU_CPSW0 Overview.....	2546
9.1.1 MCU_CPSW0 Features.....	2546
9.1.2 MCU_CPSW0 Not Supported Features.....	2547
9.1.3 Terminology.....	2547
9.2 MCU_CPSW0 Environment.....	2549
9.2.1 MCU_CPSW0 RMII Interface.....	2549
9.2.2 MCU_CPSW0 RGMII Interface.....	2550
9.3 MCU_CPSW0 Integration.....	2552
9.4 MCU_CPSW0 Functional Description.....	2554
9.4.1 Functional Block Diagram.....	2554
9.4.2 CPSW Ports.....	2554
9.4.3 Clocking.....	2555
9.4.4 Interrupt Functionality.....	2556
9.4.5 Media Independent Interfaces (XGMII/GMII).....	2558
9.4.6 Software IDLE.....	2560
9.4.7 CPSW_2G.....	2561
9.4.8 CPPI Checksum Offload.....	2582
9.4.9 Jumbo packets.....	2584
9.4.10 Zero touch of Tx (From Host) buffer descriptors.....	2585
9.4.11 Continuous transfer of packets from the queue with an end of transmission indication.....	2587
9.4.12 Controlled transmission of packets.....	2588
9.4.13 Egress Packet Operations.....	2588
9.4.14 IEEE 1588 Clock Synchronization Support.....	2590
9.4.15 Rate Limiting (Traffic Shaping) (P802.1Qav/D6.0).....	2595
9.4.16 Transmit Priority Escalation.....	2596
9.4.17 Enhanced Scheduled Traffic (EST – P802.1Qbv/D2.2).....	2596
9.4.18 DSCP.....	2599
9.4.19 Packet Priority Handling.....	2599
9.4.20 Packet CRC Handling.....	2601
9.4.21 Ethernet FIFO.....	2602
9.4.22 Ethernet Receive Flow Control.....	2602

9.4.23 Energy Efficient Ethernet Support (802.3az).....	2604
9.4.24 Switch Latency.....	2605
9.4.25 Emulation Control.....	2605
9.4.26 Software IDLE.....	2605
9.4.27 Common Platform Time Sync (CPTS).....	2605
9.4.28 MII Management Interface (MDIO).....	2622
9.4.29 Reset Isolation.....	2624
9.4.30 CPSW Initialization and Configuration.....	2625
9.4.31 Enet Mac Reset or XGMII/GMII Mode Change Configuration.....	2625
9.4.32 Memory Error Detection and Correction.....	2625
9.4.33 CPSW Network Statistics.....	2627
9.4.34 CPPI Streaming Packet Interface.....	2643
9.4.35 Egress Packet Operations.....	2649
9.5 MCU_CPSW0 Programming Guide.....	2649
9.5.1 Initialization and Configuration of CPSW Subsystem.....	2649
9.5.2 CPSW Reset.....	2650
9.5.3 MDIO Software Interface.....	2650
9.6 MSS_CPSW Registers.....	2652
<b>10 Quad Serial Peripheral Interface (QSPI).....</b>	<b>3365</b>
10.1 Quad Serial Peripheral Interface Overview.....	3366
10.2 QSPI Environment.....	3367
10.3 QSPI Functional Description.....	3368
10.3.1 QSPI Block Diagram.....	3368
10.3.2 QSPI Clock Configuration.....	3374
10.3.3 QSPI Interrupt Requests.....	3374
10.3.4 QSPI Memory Regions.....	3375
10.4 QSPI Registers.....	3377
10.4.1 QSPI Register Summary.....	3377
10.4.2 QSPI Register Description.....	3377
<b>11 Enhanced Direct Memory Access (EDMA).....</b>	<b>3389</b>
11.1 EDMA Module Overview.....	3389
11.1.1 EDMA Features.....	3390
11.2 EDMA Integration.....	3391
11.2.1 EDMA Integration.....	3392
11.2.2 EDMA Integration in MSS.....	3392
11.2.3 EDMA Integration in DSS.....	3394
11.2.4 EDMA Functional Interrupt Aggregator.....	3394
11.2.5 EDMA Error Interrupt Aggregator.....	3395
11.2.6 EDMA Configuration.....	3396
11.3 EDMA Controller Functional Description.....	3398
11.3.1 Block Diagram.....	3398
11.3.2 Types of EDMA Controller Transfers.....	3401
11.3.3 Parameter RAM (PaRAM).....	3403
11.3.4 Initiating a DMA Transfer.....	3417
11.3.5 Completion of a DMA Transfer.....	3420
11.3.6 Event, Channel, and PaRAM Mapping.....	3421
11.3.7 EDMA Channel Controller Regions.....	3423
11.3.8 Chaining EDMA Channels.....	3426
11.3.9 EDMA Interrupts.....	3427
11.3.10 Memory Protection.....	3436
11.3.11 Event Queue(s).....	3439
11.3.12 EDMA Transfer Controller (EDMA_TPTC).....	3441
11.3.13 Event Dataflow.....	3443
11.3.14 EDMA Controller Prioritization.....	3444
11.3.15 Emulation Considerations.....	3446
11.4 EDMA Transfer Examples.....	3447
11.4.1 Block Move Example.....	3447
11.4.2 Subframe Extraction Example.....	3449
11.4.3 Data Sorting Example.....	3450
11.4.4 Setting Up an EDMA Transfer.....	3452
11.5 EDMA Debug Checklist and Programming Tips.....	3454

11.5.1 EDMA Debug Checklist.....	3454
11.5.2 EDMA Programming Tips.....	3456
11.6 EDMA Event Map.....	3456
11.6.1 MSS TPCC_A Event Map.....	3456
11.6.2 MSS TPCC_B Event Map.....	3458
11.6.3 DSS TPCC_A Event Map.....	3460
11.6.4 DSS TPCC_B / TPCC_C Event Map.....	3461
11.6.5 Radar Subsystem (RSS TPCC_A) EDMA Event Map.....	3464
11.7 EDMA Request Map.....	3466
11.8 EDMA Register Manual.....	3467
11.8.1 EDMA Registers.....	3467
<b>12 Multi-Buffered Serial Peripheral Interface Module (MibSPI) with Parallel Pin Option (MibSPIP).....</b>	<b>3708</b>
12.1 Overview.....	3709
12.1.1 Word Format Options.....	3709
12.1.2 Multi-buffering (Mib) Support.....	3709
12.1.3 Transmission Lock (Multi-Buffer Mode Controller Only).....	3710
12.2 Operating Modes.....	3710
12.2.1 Pin Configurations.....	3711
12.2.2 Data Handling.....	3711
12.2.3 Operation with $\overline{\text{SPICS}}$ .....	3714
12.2.4 Operation with $\overline{\text{SPIENA}}$ .....	3715
12.2.5 Five-Pin Operation (Hardware Handshaking).....	3716
12.2.6 Data Formats.....	3717
12.2.7 Clocking Modes.....	3718
12.2.8 Data Transfer Example.....	3720
12.2.9 Decoded and Encoded Chip Select (Controller Only).....	3721
12.2.10 Variable Chip Select Setup and Hold Timing (Controller Only).....	3721
12.2.11 Hold Chip-Select Active.....	3721
12.2.12 Detection of Peripheral Desynchronization (Controller Only).....	3722
12.2.13 ENA Signal Time-Out (Controller Only).....	3723
12.2.14 Data-Length Error.....	3723
12.2.15 Parallel Mode (Multiple PICO/POCI Support, not available on all devices).....	3723
12.2.16 Continuous Self-Test (Controller/Peripheral).....	3731
12.2.17 Half Duplex Mode.....	3731
12.3 Test Features.....	3731
12.3.1 Internal Loop-Back Test Mode (Controller Only).....	3731
12.3.2 Input/Output Loopback Test Mode.....	3732
12.4 General-Purpose I/O.....	3733
12.5 Interrupts.....	3734
12.5.1 Interrupts in Multi-Buffer Mode.....	3734
12.6 DMA Interface.....	3737
12.6.1 DMA in Multi-Buffer Mode.....	3737
12.7 Module Configuration.....	3738
12.7.1 Compatibility (SPI) Mode Configuration.....	3738
12.7.2 MibSPI Mode Configuration.....	3739
12.8 Control Registers.....	3740
12.8.1 SPI Global Control Register 0 (SPIGCR0).....	3741
12.8.2 SPI Global Control Register 1 (SPIGCR1).....	3742
12.8.3 SPI Interrupt Register (SPIINT0).....	3743
12.8.4 SPI Interrupt Level Register (SPILVL).....	3746
12.8.5 SPI Flag Register (SPIFLG).....	3748
12.8.6 SPI Pin Control Register 0 (SPIPC0).....	3751
12.8.7 SPI Pin Control Register 1 (SPIPC1).....	3752
12.8.8 SPI Pin Control Register 2 (SPIPC2).....	3754
12.8.9 SPI Pin Control Register 3 (SPIPC3).....	3756
12.8.10 SPI Pin Control Register 4 (SPIPC4).....	3757
12.8.11 SPI Pin Control Register 5 (SPIPC5).....	3760
12.8.12 SPI Pin Control Register 6 (SPIPC6).....	3761
12.8.13 SPI Pin Control Register 7 (SPIPC7).....	3764
12.8.14 SPI Pin Control Register 8 (SPIPC8).....	3765
12.8.15 SPI Transmit Data Register 0 (SPIDAT0).....	3766

12.8.16 SPI Transmit Data Register 1 (SPIDAT1).....	3768
12.8.17 SPI Receive Buffer Register (SPIBUF).....	3771
12.8.18 SPI Emulation Register (SPIEMU).....	3774
12.8.19 SPI Delay Register (SPIDELAY).....	3774
12.8.20 SPI Default Chip Select Register (SPIDEF).....	3777
12.8.21 SPI Data Format Registers (SPIFMT).....	3778
12.8.22 Interrupt Vector 0 (INTVECT0).....	3781
12.8.24 Interrupt Vector 1 (INTVECT1).....	3782
12.8.25 SPI Pin Control Register 9 (SPIPC9).....	3784
12.8.26 Parallel/Modulo Mode Control Register (SPIPMCTRL).....	3785
12.8.27 Multi-buffer Mode Enable Register (MIBSPIE).....	3788
12.8.28 TG Interrupt Enable Set Register (TGITENST).....	3789
12.8.29 TG Interrupt Enable Clear Register (TGITENCR).....	3790
12.8.30 Transfer Group Interrupt Level Set Register (TGITLVST).....	3791
12.8.31 Transfer Group Interrupt Level Clear Register (TGITLVCR).....	3792
12.8.32 Transfer Group Interrupt Flag Register (TGINTFLG).....	3793
12.8.33 Tick Count Register (TICKCNT).....	3794
12.8.34 Last TG End Pointer (LTGPEND).....	3796
12.8.35 TGx Control Registers (TGxCTRL).....	3797
12.8.36 DMA Channel Control Register (DMAxCTRL).....	3802
12.8.37 DMAxCOUNT Register (ICOUNT).....	3805
12.8.38 DMA Large Count (DMACNTLEN).....	3806
12.8.39 Multi-buffer RAM Uncorrectable Parity Error Control Register (UERRCTRL).....	3806
12.8.40 Multi-buffer RAM Uncorrectable Parity Error Status Register (UERRSTAT).....	3808
12.8.41 RXRAM Uncorrectable Parity Error Address Register (UERRADDR1).....	3809
12.8.42 TXRAM Uncorrectable Parity Error Address Register (UERRADDR0).....	3810
12.8.43 RXRAM Overrun Buffer Address Register (RXOVRN_BUF_ADDR).....	3811
12.8.44 I/O-Loopback Test Control Register (IOLPBKTSTCR).....	3812
12.8.45 SPI Extended Prescale Register 1 (EXTENDED_PRESCALE1 for SPIFMT0 and SPIFMT1).....	3814
12.8.46 SPI Extended Prescale Register 2 (EXTENDED_PRESCALE2 for SPIFMT2 and SPIFMT3).....	3816
12.9 Multi-Buffer RAM.....	3818
12.9.1 Multi-Buffer RAM Auto Initialization.....	3819
12.9.2 Multi-Buffer RAM Register Summary.....	3819
12.9.3 Multi-Buffer RAM Transmit Data Register (TXRAM).....	3820
12.9.4 Multi-Buffer RAM Receive Buffer Register (RXRAM).....	3823
12.10 Parity Memory.....	3826
12.10.1 Example of Parity Memory Organization.....	3828
12.11 MibSPI Pin Timing Parameters.....	3829
12.11.1 Controller Mode Timings for SPI/MibSPI.....	3829
12.11.2 Peripheral Mode Timings for SPI/MibSPI.....	3831
12.11.3 Controller Timing Parameter Details.....	3832
12.11.4 Peripheral Mode Timing Parameter Details.....	3832
<b>13 Vectored Interrupt Manager (VIM) Module.....</b>	<b>3833</b>
13.1 VIM Overview.....	3834
13.2 VIM Interrupt Inputs.....	3834
13.3 VIM Interrupt Outputs.....	3834
13.4 VIM Interrupt Vector Table (VIM RAM).....	3834
13.5 VIM Interrupt Prioritization.....	3835
13.6 VIM ECC Support.....	3835
13.7 VIM Lockstep Mode.....	3836
13.8 VIM IDLE State.....	3836
13.9 VIM Interrupt Handling.....	3836
13.9.1 Servicing IRQ Through Vector Interface.....	3836
13.9.2 Servicing IRQ Through MMR Interface.....	3837
13.9.3 Servicing IRQ Through MMR Interface (Alternative).....	3837
13.9.4 Servicing FIQ.....	3838
13.9.5 Servicing FIQ (Alternative).....	3838
13.10 MSS_VIM Registers.....	3840
<b>14 Real-Time Interrupt (RTI) and Watchdog Module.....</b>	<b>4441</b>
14.1 Overview.....	4441
14.1.1 Features.....	4441

14.1.2 Industry Standard Compliance Statement.....	4441
14.2 Module Operation.....	4442
14.2.1 Counter Operation.....	4442
14.2.2 Interrupt/DMA Requests.....	4444
14.2.3 RTI Clocking.....	4445
14.2.4 Digital Watchdog (DWD).....	4445
14.2.5 Halting Debug Mode Behaviour.....	4449
14.3 MSS_RTIC Registers.....	4450
<b>15 UART/SCI.....</b>	<b>4494</b>
15.1 Introduction.....	4494
15.1.1 SCI Features.....	4494
15.1.2 Block Diagram.....	4494
15.2 SCI Communication Formats.....	4497
15.2.1 SCI Frame Formats.....	4497
15.2.2 SCI Timing Mode.....	4497
15.2.3 SCI Baud Rate.....	4499
15.2.4 SCI Multiprocessor Communication Modes.....	4499
15.3 SCI Interrupts.....	4502
15.3.1 Transmit Interrupt.....	4503
15.3.2 Receive Interrupt.....	4503
15.3.3 WakeUp Interrupt.....	4503
15.3.4 Error Interrupts.....	4504
15.4 SCI DMA Interface.....	4505
15.4.1 Receive DMA Requests.....	4505
15.4.2 Transmit DMA Requests.....	4505
15.5 SCI Configurations.....	4507
15.5.1 Receiving Data.....	4507
15.5.2 Transmitting Data.....	4508
15.6 MSS_SCI Registers.....	4509
15.7 SCI GPIO Functionality.....	4550
15.7.1 GPIO Functionality.....	4550
15.7.2 Under Reset.....	4550
15.7.3 Out of Reset.....	4551
15.7.4 Open-Drain Feature Enabled on a Pin.....	4551
15.7.5 Summary.....	4551
<b>16 Inter-Integrated Circuit (I2C) Module.....</b>	<b>4552</b>
16.1 Overview.....	4552
16.1.1 Introduction to the I2C Module.....	4553
16.1.2 Functional Overview.....	4553
16.1.3 Clock Generation.....	4556
16.2 I2C Module Operation.....	4557
16.2.1 Input and Output Voltage Levels.....	4557
16.2.2 I2C Module Reset Conditions.....	4557
16.2.3 I2C Module Data Validity.....	4557
16.2.4 I2C Module Start and Stop Conditions.....	4558
16.2.5 Serial Data Formats.....	4558
16.2.6 NACK Bit Generation.....	4560
16.3 I2C Operation Modes.....	4561
16.3.1 Controller Transmitter Mode.....	4561
16.3.2 Controller Receiver Mode.....	4561
16.3.3 Target Transmitter Mode.....	4561
16.3.4 Target Receiver Mode.....	4561
16.3.5 Free Run Mode.....	4562
16.3.6 Ignore NACK Mode.....	4562
16.4 I2C Module Integrity.....	4563
16.4.1 Arbitration.....	4563
16.4.2 I2C Clock Generation and Synchronization.....	4564
16.4.3 Prescaler.....	4564
16.4.4 Noise Filter.....	4564
16.5 Operational Information.....	4565
16.5.1 I2C Module Interrupts.....	4565

16.5.2 DMA Controller Events.....	4565
16.5.3 I2C Enable/Disable.....	4566
16.5.4 General Purpose I/O.....	4566
16.5.5 Pull Up/Pull Down Function.....	4567
16.5.6 Open Drain Function.....	4567
16.6 MSS_I2C Registers.....	4568
16.7 Sample Waveforms.....	4597
<b>17 General-Purpose Input/Output (GIO) Module.....</b>	<b>4598</b>
17.1 Overview.....	4598
17.2 Quick Start Guide.....	4599
17.3 Functional Description of GIO Module.....	4601
17.3.1 I/O Functions.....	4601
17.3.2 Interrupt Function.....	4602
17.3.3 GIO Block Diagram.....	4603
17.4 Device Modes of Operation.....	4604
17.4.1 Emulation Mode.....	4604
17.4.2 Power-Down Mode (Low-Power Mode).....	4604
17.4.3 Interrupts.....	4604
17.5 TOP_GIO Registers.....	4605
17.6 I/O Control Summary.....	4693
<b>18 Enhanced Pulse Width Modulator (ePWM) Module.....</b>	<b>4694</b>
18.1 Introduction.....	4695
18.1.1 Submodule Overview.....	4695
18.1.2 Register Mapping.....	4698
18.2 ePWM Submodules.....	4699
18.2.1 Overview.....	4699
18.2.2 Time-Base (TB) Submodule.....	4701
18.2.3 Counter-Compare (CC) Submodule.....	4712
18.2.4 Action-Qualifier (AQ) Submodule.....	4718
18.2.5 Dead-Band Generator (DB) Submodule.....	4731
18.2.6 PWM-Chopper (PC) Submodule.....	4737
18.2.7 Trip-Zone (TZ) Submodule.....	4741
18.2.8 Event-Trigger (ET) Submodule.....	4748
18.2.9 Digital Compare (DC) Submodule.....	4753
18.2.10 Proper Interrupt Initialization Procedure.....	4759
18.3 Application Examples.....	4759
18.3.1 Overview of Multiple Modules.....	4759
18.3.2 Key Configuration Capabilities.....	4760
18.3.3 Controlling Multiple Buck Converters With Independent Frequencies.....	4761
18.3.4 Controlling Multiple Buck Converters With Same Frequencies.....	4764
18.3.5 Controlling Multiple Half H-Bridge (HHB) Converters.....	4767
18.3.6 Controlling Dual 3-Phase Inverters for Motors (ACI and PMSM).....	4769
18.3.7 Practical Applications Using Phase Control Between PWM Modules.....	4772
18.4 ePWM Module Control and Status Registers.....	4774
<b>19 On-chip Debug.....</b>	<b>4824</b>
19.1 AWR2544 DebugSS Architecture .....	4825
19.1.1 Overview.....	4825
19.1.2 DebugSS Architecture .....	4825
19.1.3 Debug Subsystem Address Map .....	4826
19.1.4 Trace Subsystem.....	4827
19.1.5 Suspend Peripherals.....	4830
<b>20 Safety Modules.....</b>	<b>4831</b>
20.1 Core Clock Comparator (CCC).....	4832
20.1.1 Description.....	4832
20.1.2 Block Diagram.....	4832
20.1.3 Perform Clock Comparison.....	4833
20.1.4 I/O Table.....	4833

The AWR2544 device is targetted to serve an evolving Satellite vehicle architecture wherein the near raw radar sensor data (compressed 1D FFT output) is sent to a central compute engine over a high speed interface. The AWR2544 is a single chip radar transceiver with integrated 76-81 GHz LO, 4 RXs, and 4 TXs, with 1Gbps Ethernet capability for streaming data at high speed, along with an integrated main MCU that is accessible for customer use. This chapter introduces the features, subsystems, and architecture of AWR2544 Systems on Chip (SoCs).

### 1.1 Device Overview

The AWR2544 is targeted for Automotive Satellite Radar Sensor System. This SoC aims to meet the complex processing needs of end equipment such as High End corner Radar, Entry level/Mid end Front Radar, and Blind Spot Detection (BSD).

The SoC has been designed as a high performance and highly integrated device architecture, adding significant enhancement on processing power and coherent memory support. In addition, they support state of art security and functional safety features.

Some of the main distinguished characteristics of the device are:

- Frequency-modulated Continuous Wave (FMCW) Radio Frequency Transceiver
  - Integrated PLL, Transmitter, Receiver, Baseband and A2D
  - 76-81 GHz Coverage with 5GHz available Bandwidth
  - 4 Receive channels
  - 4 Transmit channels
  - Per Transmit Phase Shifter
  - Ultra-accurate Chirp engine based on Fractional-n PLL
- Wide IF bandwidth up to 20MHz to decrease range/Doppler ambiguity
- Highly programmable chirp generation
- 12, 14, and 16-bit I-Only ADC With Variable Baseband ADC Sampling Rates up to 37.5 Msps.
- High Performance Radar Processing Accelerators having capability to offload the CPU almost all the pre-processing functions.
- Hardware Security Module (HSM) – To provide secure execution environment.
- High Performance/Cost ratio. Highly optimized, area efficient infrastructure to support the radar data flow with maximum cost effectiveness and efficiency.
- High Temperature operating range ( $>125^{\circ}\text{C}$ ) for automotive use cases.
- 2 Mbytes of 'On Chip' RAM.

The device is composed of the following main subsystems:

- One Lock-step Cortex R5F microcontroller at up to 300 MHz.
- Radar Hardware Accelerators running at 300 MHz
- Cortex M4-based () Hardware Security Module (HSM) for running security services in a secure island.
- Radar Subsystem (RSS) comprises of a lockstep CR4 microcontroller at up to 200 MHz, Digital front end (DFE) at up to 200 MHz, and Analog-RF subsystem. This group of modules is referred as BIST SubSystem(BSS) and in the later chapters BSS or RSS will be used interchangeably as and when required.

### Note

The R5F core of AWR2544 devices only supports lock-step mode.

The device provides a rich set of peripherals, such as:

- General connectivity peripherals, including:
  - One Inter-Integrated Circuit (I2C) interface
  - Two Controller/Peripheral Multi-Buffered Serial Peripheral Interfaces (MiBSPI)
  - Two configurable Universal Asynchronous Receiver/Transmitter (UART) interfaces
  - One General-Purpose Input/Output (GPIO) module
- High-speed interfaces, including:
  - One 1 Gbps Ethernet switch (CPSW)
- Output Control interface
  - Three Enhanced Pulse Width Modulation (EPWM) modules
- EMIF Interface
  - One Quad-Serial Peripheral Interface (QSPI) at up to 75 MHz.
- Timers and Watchdog Module
  - Three Real Time Interrupts (RTI) modules in MSS
  - One Watchdog modules in MSS (Same RTI IP but in Watchdog configuration)
- Interprocessor Communication (IPC) interface
  - Mailbox module for interprocessor communication between the different modules
- Sub-system Reset and control module with device top-level configurations:
  - Power distribution, reset controls, and clock management components.
  - Registers for the following functions:
    - I/O Configurations
    - PLL control and associated High-speed Dividers (HSDIV)
    - Clock Selection
    - System boot mode decoding logic
  - Up to 2MB of on-chip memory split across MSS, and the shared memory L3 bank.
  - Debug and trace capabilities.

The device includes different modules for functional safety requirements support:

- Logic BIST mechanism for all the CPU cores
- PBIST mechanism for all the memories
- ECC on the critical memories
- MPU on all critical shared resources – MMRs and memories
- Voltage monitor on all the primary supplies with >90% DC
- Clock monitors to monitor all the primary clocks. At least one Watchdog per each subsystem.
- PLL Lock monitors – PHASELOCK, FREQLOCK
- Temperature sensors with an accuracy of +/-5°C near R5F, HSM, and all other temperature sensitive locations.
- Separate safety island (MCU) with Lock-Step Cortex-R5F.
- Safety enabled interconnect
- One Error Signalling Module (ESM) to enable error monitoring
- Temperature monitoring sensors
- Dedicated hardware Memory Cyclic Redundancy Check (MCRC) blocks.

## 1.2 Device Block Diagram

### AWR2544 – Block Diagram

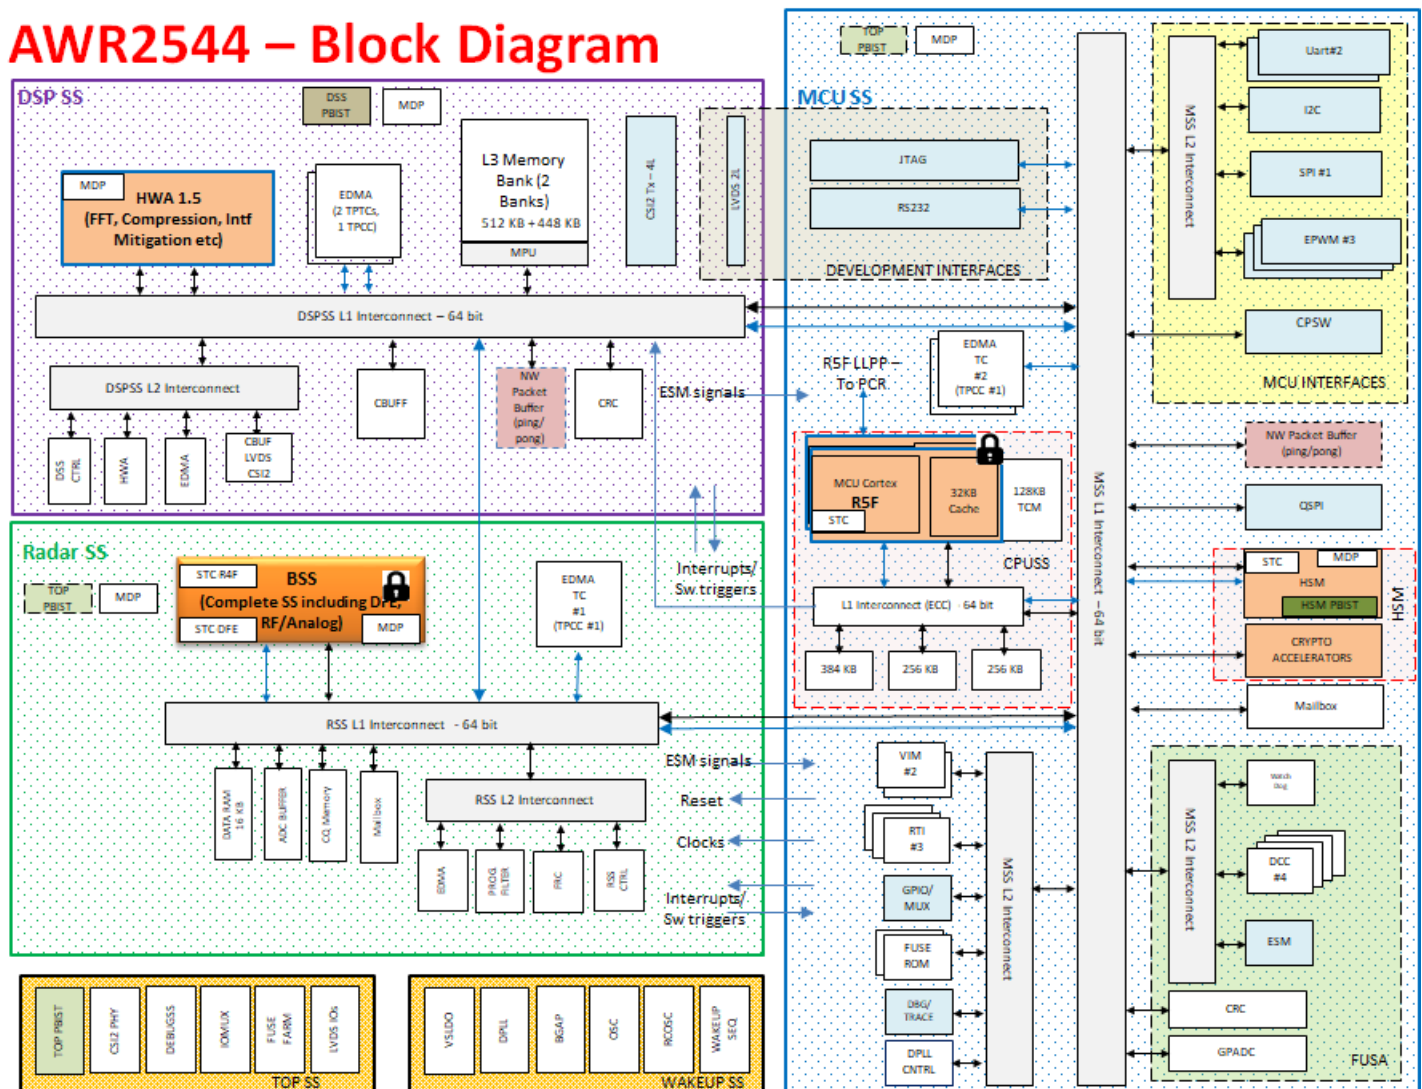

Figure 1-1. Block Diagram

Table 1-1. Module Allocation and Instances within the Device

Module Full Name	Module Abbreviation	MSS	RSS
ARM® Lockstep R5F Subsystem	R5FSS	1	
ARM Cortex® M4 Hardware Security Module Subsystem	HSM	1	
Common Platform Ethernet Switch	CPSW	1	
Quad-Serial Peripheral Interface	QSPI	1	
Enhanced Direct Memory Access	EDMA_TPCC EDMA_TPTC	TPCC- 1 TPTC-2	TPCC- 1 TPTC-1
Serial Peripheral Interface	MIBSPI	1	
Vectored Interrupt Manager	VIM	2	
Real Time Interrupt Timer	RTI	3	

**Table 1-1. Module Allocation and Instances within the Device (continued)**

Module Full Name	Module Abbreviation	MSS	RSS
Windowed Watchdog Timer	RTI-WWDT	1	
Universal Asynchronous Receiver/ Transmitter	UART	2	1
RS232	RS232	1	
Inter Integrated Circuit	I2C	1	
General Purpose Input Output	GPIO	1	
EFUSE Controller	EFUSE	2	
Debug Subsystem	DEBUGSS	1	
Dual Clock Comparator	DCC	4	
Cyclic Redundancy Check	CRC	1	
General Purpose Analog to Digital Convertor	GPADC	1	1
Enhanced Pulse Width Modulation	EPWM	3	
Error Signaling Module	ESM	1	
Radar Accelerators	HWA1.5		
LVDS Interface	LVDS		
Interprocess Communication	MAILBOX	1	1

Note: Above table provides module/components list for all the subsystem except BSS. Bist SubSystem (BSS), part of RadarSS (RSS) is a blackbox and not available for user.

**Table 2-1. AWR2544 Memory Map**

Device Variant	DSS L3	MSS L2	MSS L1
AWR2544	960KB	896KB [384KB+256KB+256KB memory bank]	L1I:16KB L1D: 16KB TCM 128KB (TCMA: 64KB, TCMB: 64KB)

L3 consists of different memory banks over which Bank3 is allocated to MSS\_L2 or kept with itself.

Memory Bank	Device (in KB)
Bank 0	512
Bank 1	448
Bank 2	DSS_L3 = 0 / MSS_L2 = 256 DSS_L3 = 256 / MSS_L2 = 0

**Note**

There is no restriction fundamentally on access to MSS and DSS memories. The address regions (global view) need to be appropriately selected. There are MPUs at the key memories (for ex., MSS L2, DSS L3,...) for application to restrict the access as needed.

MSS_QSPI	0xC800 0000	116Bytes

### Note

For MSS\_TCMA\_CR5A 0xC100 0000, 192 KB size includes size of TCMA RAM (64kb) and TCMA ROM (128KB). ROM-to-RAM (RBL to SBL) switching causes TCMA\_ROM\_CR5A eclipse to TCMA\_RAM\_CR5A i.e. 0x0000 0000 now maps to TCMA\_RAM\_CR5A memory area.

### Note

TCMB are 0x0002 0000 and 0x0008 0000 respectively as per R5A view. For AXI slave (EDMA or other processors) view addresses are 0xC100 0000 and 0xC180 0000.

### Note

For MSS\_TCMA\_CR5A 0xC100 0000, 192 KB size includes size of TCMA RAM (64kb) and TCMA ROM (128KB).

The device implements a system interconnect based on TI's common bus architecture, comprising of VBUSM and VBUSP protocols.

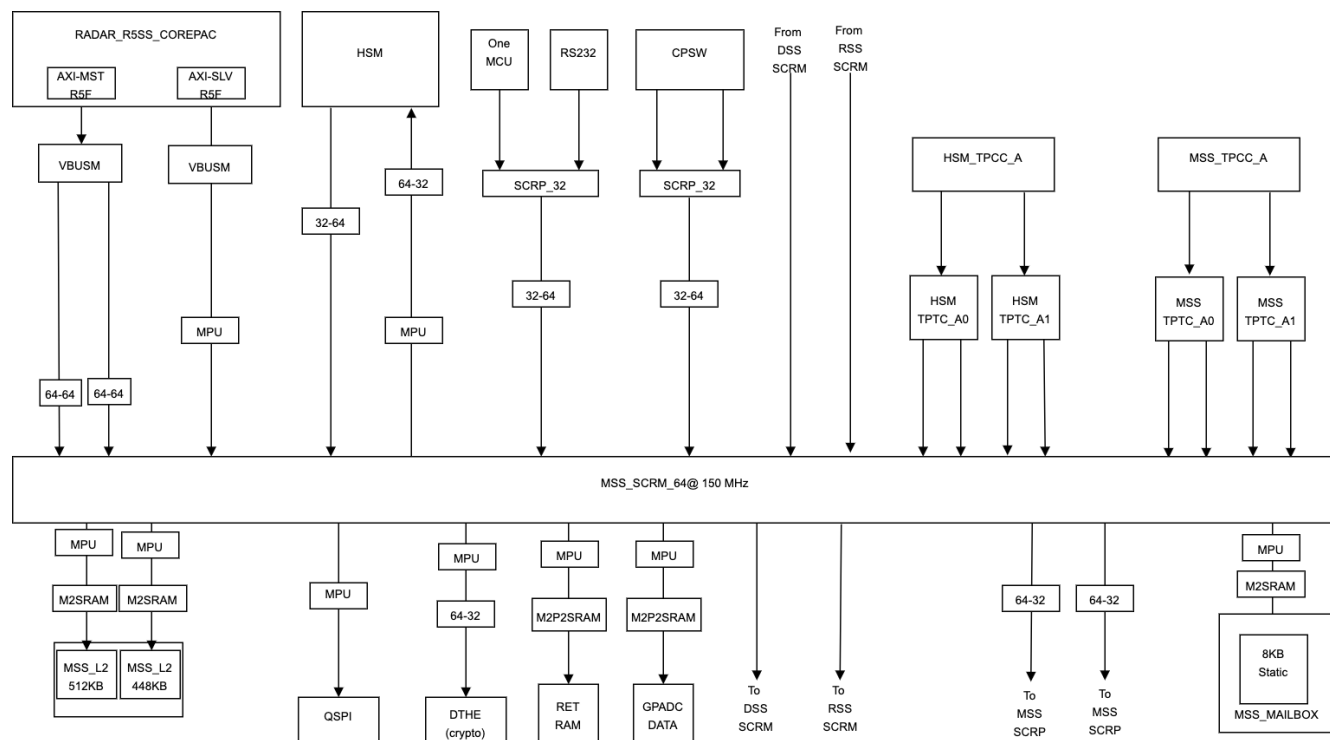

The system interconnect is designed for the high-performance needs of the system. The interconnect structure is a full crossbar implementation, wherein every controller has an independent communication path with every target such that transactions from each controllers have access to full interconnect bandwidth. Arbitration only happens at target end point. It's divided into interconnect systems local to each subsystem: the Main R5F subsystem, and Radar Subsystem .

### **3.1 Main Subsystem R5F Infrastructure**

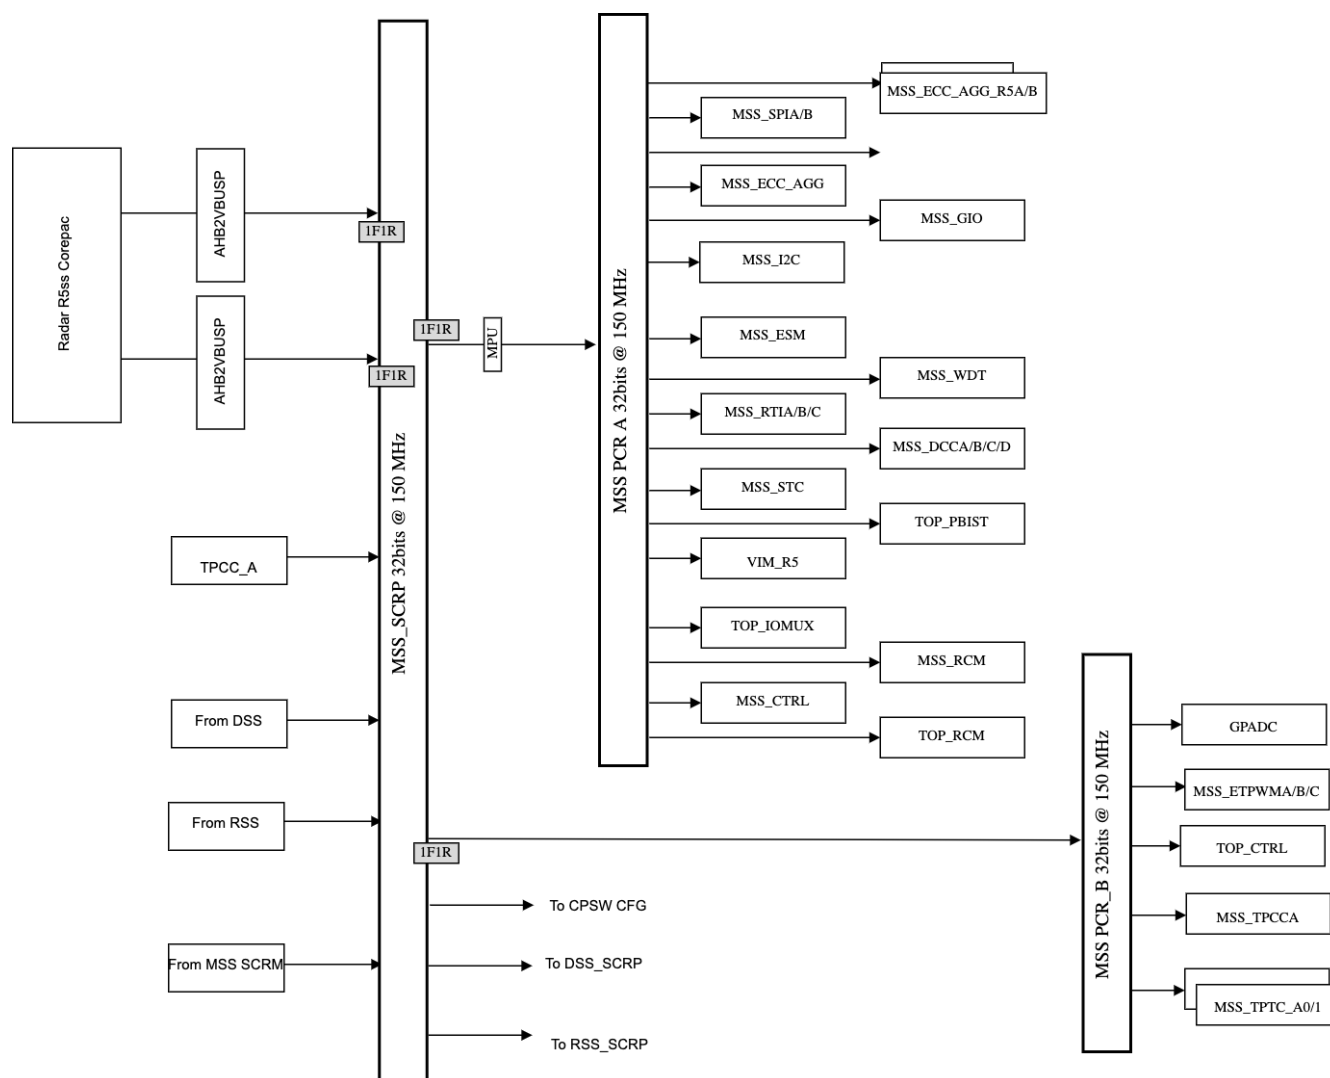

In the main subsystem, the primary VBUSM SCR is responsible for managing the arbitration priority between accesses from multiple controllers to each of the targets. The arbitration priority is always round-robin.

The main subsystem has PCR interconnect that manages the accesses to the peripheral registers and peripheral memories, and provides a global reset for all peripherals. It also supports the capability to selectively enable or disable the clock for each peripheral individually. The PCR also manages the accesses to the system module registers required to configure the device clocks, interrupts, and so forth.

The system module registers include status flags for indicating exception conditions – resets, aborts, errors, and interrupts.

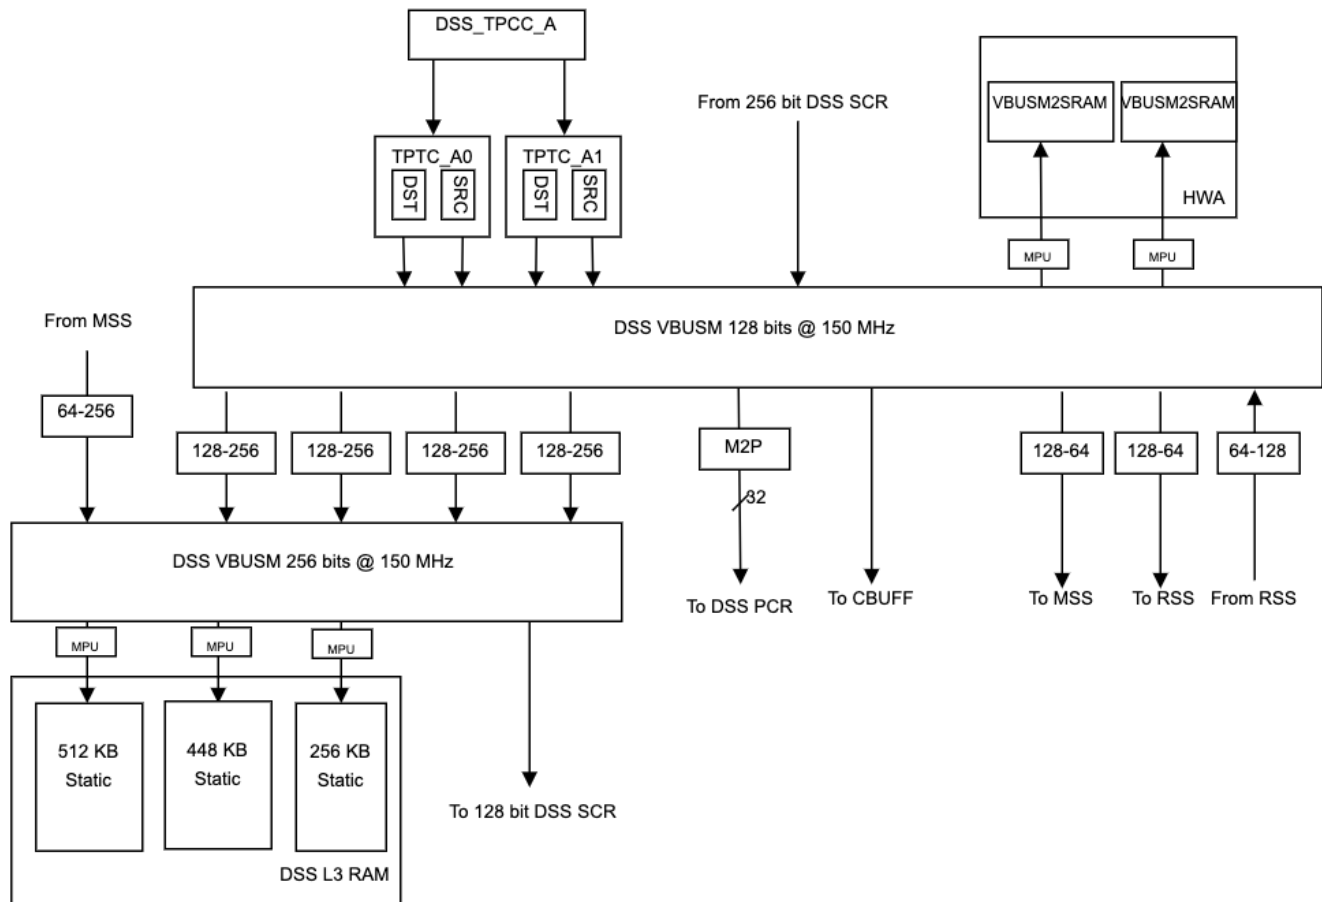

**Figure 3-1. Main Subsystem R5F Infrastructure**

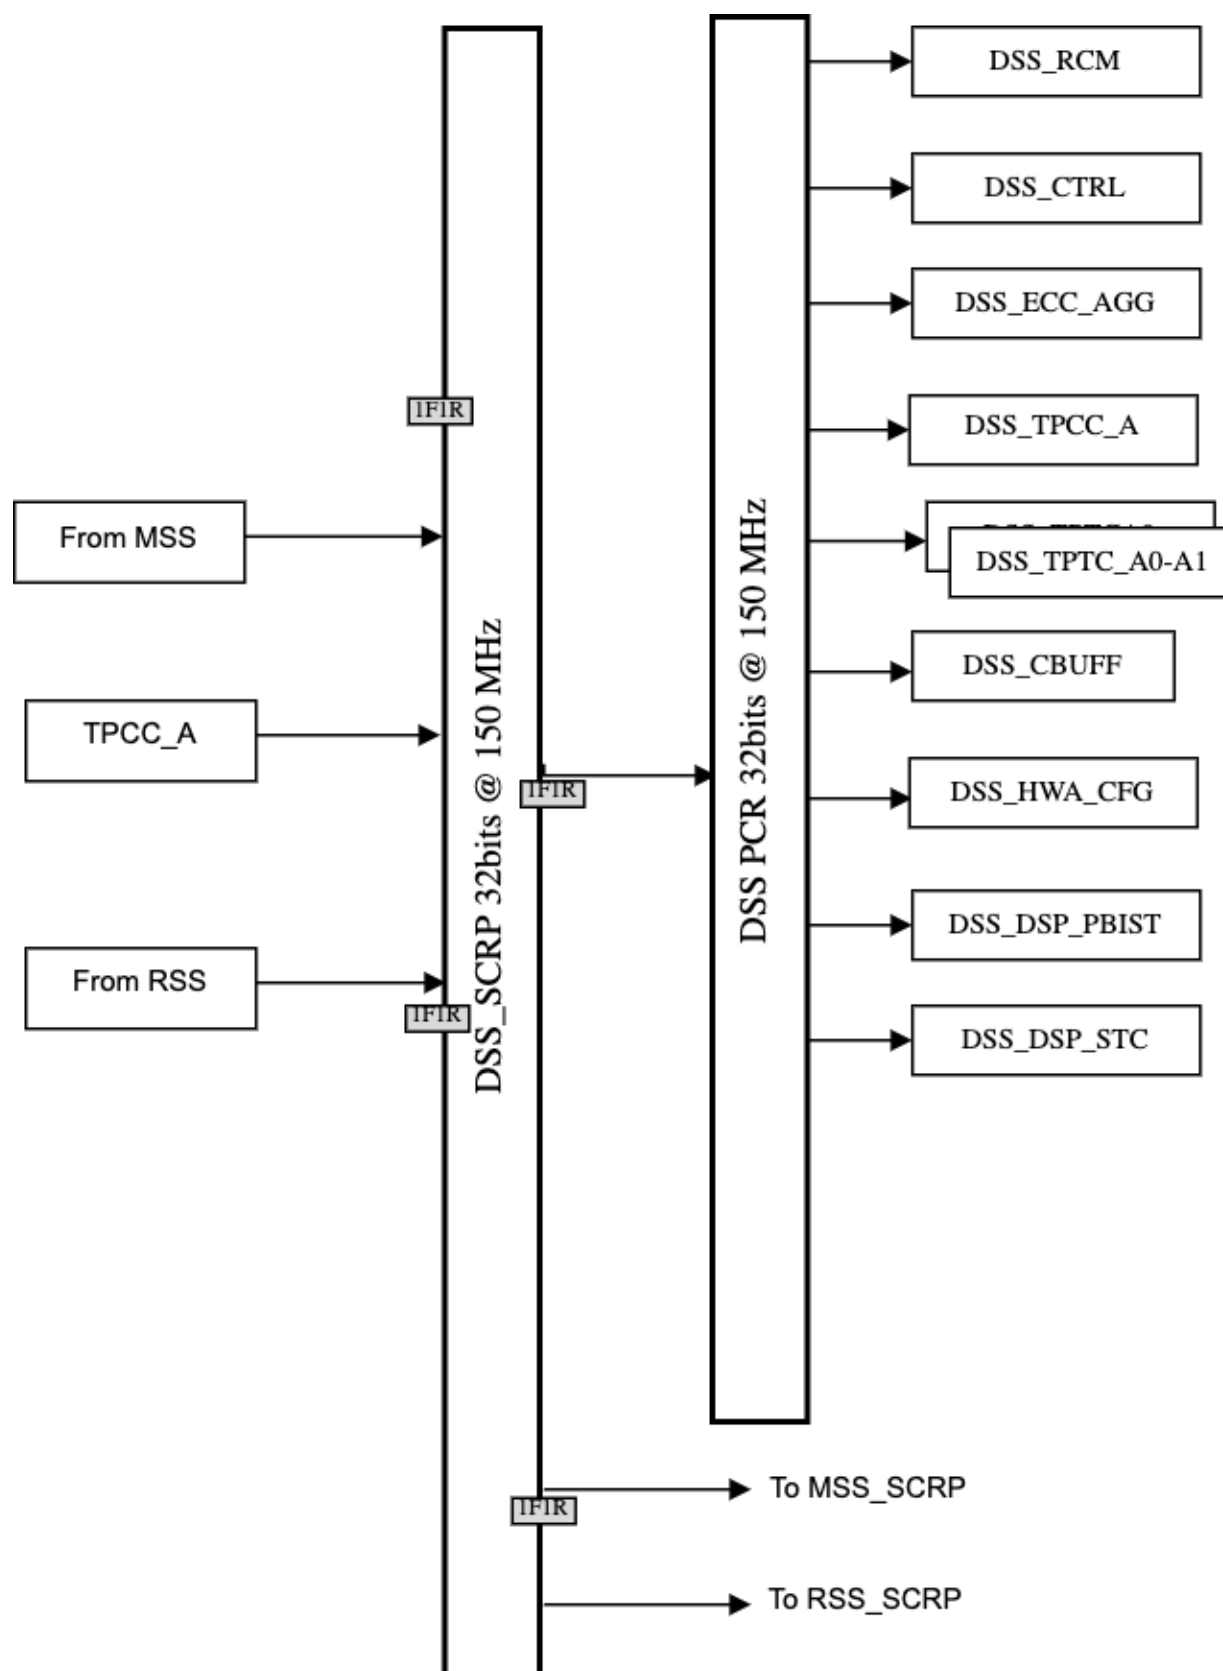

**Figure 3-2. MSS Peripheral Infrastructure**

## 3.2 DSP Subsystem C66x Infrastructure

**Figure 3-3. DSP Subsystem Infrastructure**

The DSS has a hybrid infrastructure of 256-bit and 128-bit data SCRs. This is to match the L3 and DSP MDMA port data widths. The area overhead of hooking up all the other controllers and targets to a 256-bit SCR because the number of bridges required was too large. The MSS Controller also sits on the 256-bit SCR, so that the latency to L3 is reduced.

**Figure 3-4. DSS Peripheral Infrastructure**

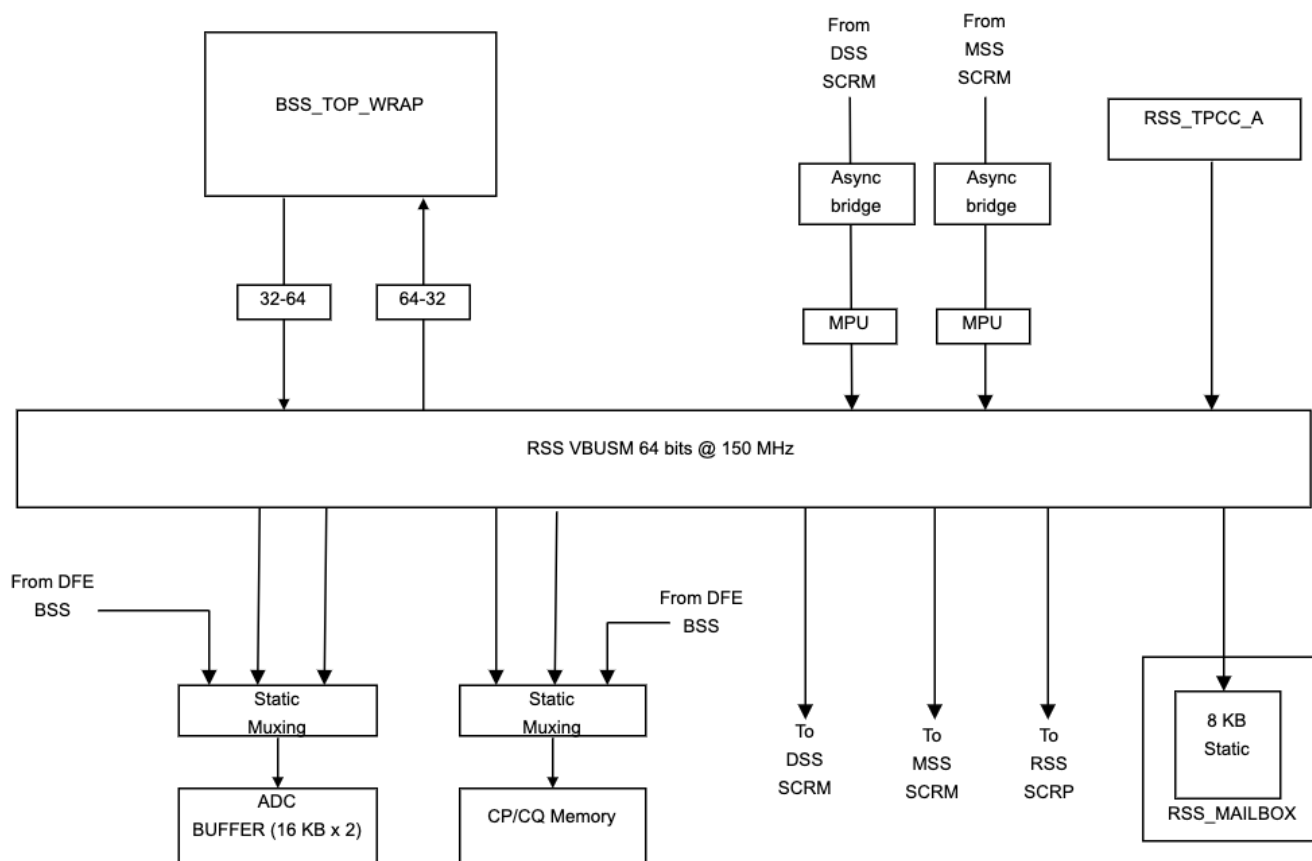

### Note

TPTC-C2, TPTC-C3, TPTC-C4, and TPTC-C5 modules and their functionality are not supported in this family of devices. *Any information regarding these modules has been retained in the documentation solely for the purpose of clarifying memory map read/write attributes. Features noted as “not supported” must not be used.*

## 3.3 Radar Subsystem Infrastructure

The RSS has a 64-bit data SCR

**Figure 3-5. Radar Control Subsystem Infrastructure**

## 3.4 Peripheral Central Resource (PCR)

There are a total of 6 PCRs in the device.

- MSS\_PCR1
- MSS\_PCR2
- DSS\_PCR
- HSM\_PCR
- HSM\_SOC\_PCR
- RSS\_PCR

#### Note

For all the PCR tables above, if any of the PCR region has more than one quadrant then a) if it has quadrant set 0,1 then configure only quadrant 0. b) if it has quadrant set 0,1,2,3 then configure only quadrant 0. c) if it has quadrant set 2,3 then configure only quadrant 2.

### General description about the PCR

The Peripheral Central Resource (PCR) provides decoding and multiplexing between the peripheral bridge and the peripherals and memories. The peripheral bridge is connected to the PCR using the VBUSP. The VBUSP protocol is used to communicate with the peripherals selects (PS), the peripheral memory frame (PCS). Each

PS, PPSE (for system peripherals) frame can be fractioned into 4 quadrants, that can occupy 256 bytes each. For PCS, there is no provision of quadrants.

### Different ways to protect a peripheral using PCR

1. **Using the PMPROT (peripheral memory protection) and PPROT (peripheral protection) registers** - using these registers, it is possible to restrict writes to each one of the non-system peripherals individually to only the privilege mode. Here, PMPROT is being used for PCS region and PPROT registers are being used to protect the PS region.
2. **Using the master-id registers** - using these registers, access to a slave can be restricted for a particular master (maximum 16 masters) using master-id register bits. PCR will respond with an address error (AERROR) for requests from masters which does not have access privilege through master-id registers. To utilize the master-id protection for the peripherals, the Software should first program master-id registers for all generated frames by enabling writes to master-id registers through master-id protect write enable register (MSTIDWRENA). Then enable the master-id check through the master-id enable register (MSTIDENA).

Register size	Number of assigned quadrant	Quadrant 0	Quadrant 1	Quadrant 2	Quadrant 3
<256	1	✓	✓	✓	✓
512> >256	2	✓	-	✓	-
1K> >512	4	✓	-	-	-
>1K	N/A	-	-	-	-

### How the quadrants are being used in a PS frame

The following are the ways in which quadrants are used within a PS frame:

1. The slave uses all the four quadrants: Only the bit corresponding to the quadrant 0 of PSn is implemented. It protects the whole 1K-byte frame. The remaining three bits are not implemented.
2. The slave uses two quadrants: Each quadrant has to be in one of these groups: (Quad 0 and Quad 1) or (Quad 2 and Quad 3). For the group Quad0/Quad1, the bit quadrant 0 protects both quadrants 0 and 1. The bit quadrant 1 is not implemented. For the group Quad2/Quad3, the bit quadrant 2 protects both quadrants 2 and 3. The bit quadrant 3 is not implemented.
3. The slave uses only one quadrant: In this case, the bit, for that specific quadrant will protect the whole peripheral.

### 3.4.1 MSS\_PCR1 Registers

Table 3-5 lists the memory-mapped registers for the MSS\_PCR1 registers. All register offset addresses not listed in Table 3-5 should be considered as reserved locations and the register contents should not be modified.

Complex bit access types are encoded to fit into small table cells. [Table 3-6](#) shows the codes that are used for access types in this section.

**Table 3-6. MSS\_PCR1 Access Type Codes**

Access Type	Code	Description
Read Type		
R	R	Read

**Table 3-6. MSS\_PCR1 Access Type Codes  
(continued)**

Access Type	Code	Description
Write Type		
W	W	Write
Reset or Default Value		
-n		Value after reset or the default value

### 3.4.1.1 PMPROTSET0 Register (Offset = 0h) [Reset = 00000000h]

PMPROTSET0 is shown in [Table 3-7](#).

Return to the [Summary Table](#).

Set-only register to protect PCS frames 0 to 31

**Table 3-7. PMPROTSET0 Register Field Descriptions**

Bit	Field	Type	Reset	Description
31	PCS31_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
30	PCS30_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
29	PCS29_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
28	PCS28_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
27	PCS27_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.

**Table 3-7. PMPROTSET0 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
26	PCS26_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
25	PCS25_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
24	PCS24_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
23	PCS23_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
22	PCS22_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
21	PCS21_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.12 PPROTCLR3 Register (Offset = 4Ch) [Reset = 00000000h]

PPROTCLR3 is shown in [Table 3-18](#).

Return to the [Summary Table](#).

Clear-only register to protect the 32 quadrants of PS24 to PS31

**Table 3-18. PPROTCLR3 Register Field Descriptions**

Bit	Field	Type	Reset	Description
31	PS31_QUAD3_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
30	PS31_QUAD2_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
29	PS31_QUAD1_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
28	PS31_QUAD0_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
27	PS30_QUAD3_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
26	PS30_QUAD2_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
25	PS30_QUAD1_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect

**Table 3-18. PPROTCLR3 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
24	PS30_QUAD0_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
23	PS29_QUAD3_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
22	PS29_QUAD2_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
21	PS29_QUAD1_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
20	PS29_QUAD0_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
19	PS28_QUAD3_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
18	PS28_QUAD2_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
17	PS28_QUAD1_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect

**Table 3-18. PPROTCLR3 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
16	PS28_QUAD0_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
15	PS27_QUAD3_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
14	PS27_QUAD2_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
13	PS27_QUAD1_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
12	PS27_QUAD0_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
11	PS26_QUAD3_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
10	PS26_QUAD2_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
9	PS26_QUAD1_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect

**Table 3-18. PPROTCLR3 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
8	PS26_QUAD0_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
7	PS25_QUAD3_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
6	PS25_QUAD2_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
5	PS25_QUAD1_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
4	PS25_QUAD0_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
3	PS24_QUAD3_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
2	PS24_QUAD2_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
1	PS24_QUAD1_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect

**Table 3-18. PPROTCLR3 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
0	PS24_QUAD0_PROT_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Clears the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect

### 3.4.1.13 PCSPWRDWNSET0 Register (Offset = 60h) [Reset = 00000000h]

PCSPWRDWNSET0 is shown in [Table 3-19](#).

Return to the [Summary Table](#).

Set-only register to powerdown independent (non-shared) PCS frames 0 to 31

**Table 3-19. PCSPWRDWNSET0 Register Field Descriptions**

Bit	Field	Type	Reset	Description
31	PCS31_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
30	PCS30_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
29	PCS29_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
28	PCS28_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
27	PCS27_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
26	PCS26_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
25	PCS25_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
24	PCS24_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
23	PCS23_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect

**Table 3-19. PCSPWRDWNSET0 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
22	PCS22_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
21	PCS21_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
20	PCS20_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
19	PCS19_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
18	PCS18_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
17	PCS17_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect

Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
9	PCS41_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
8	PCS40_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
7	PCS39_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
6	PCS38_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
5	PCS37_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
4	PCS36_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
3	PCS35_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect

**Table 3-22. PCSPWRDWNCLR1 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
2	PCS34_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
1	PCS33_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
0	PCS32_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect

### 3.4.1.17 PSPWRDWNSET0 Register (Offset = 80h) [Reset = 00000000h]

PSPWRDWNSET0 is shown in [Table 3-23](#).

Return to the [Summary Table](#).

Set-only register to powerdown the applicable peripherals in the 32 quadrants of PS0 to PS7

**Table 3-23. PSPWRDWNSET0 Register Field Descriptions**

Bit	Field	Type	Reset	Description
31	PS7_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
30	PS7_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
29	PS7_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
28	PS7_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
27	PS6_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
26	PS6_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
25	PS6_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

**Table 3-23. PSPWRDWNSET0 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
24	PS6_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
23	PS5_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
22	PS5_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
21	PS5_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
20	PS5_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
19	PS4_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
18	PS4_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
17	PS4_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

**Table 3-23. PSPWRDWNSET0 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
16	PS4_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
15	PS3_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
14	PS3_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
13	PS3_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
12	PS3_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
11	PS2_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
10	PS2_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable bit only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
9	PS2_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

**Table 3-23. PSPWRDWNSET0 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
8	PS2_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
7	PS1_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
6	PS1_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
5	PS1_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
4	PS1_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
3	PS0_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
2	PS0_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
1	PS0_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

**Table 3-23. PSPWRDWNSET0 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
0	PS0_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

### 3.4.1.18 PSPWRDWNSET1 Register (Offset = 84h) [Reset = 00000000h]

PSPWRDWNSET1 is shown in [Table 3-24](#).

Return to the [Summary Table](#).

Set-only register to powerdown the applicable peripherals in the 32 quadrants of PS8 to PS15

**Table 3-24. PSPWRDWNSET1 Register Field Descriptions**

Bit	Field	Type	Reset	Description
31	PS15_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
30	PS15_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect

### 3.4.1.25 PDPWRDWNSET Register (Offset = C0h) [Reset = 00000000h]

PDPWRDWNSET is shown in [Table 3-31](#).

Return to the [Summary Table](#).

Set-only register to powerdown the debug frame

**Table 3-31. PDPWRDWNSET Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-1	RESERVED	R	0h	Reserved
0	PD_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = Clock to the debug frame needs to be powered down. 0 = Clock to the debug frame needs to be powered up. Writable only in privileged mode 1 = Bit 0 when written 1, will get set in both PDPWRDWNSET and PDPWRDWNCLR registers. The other bits are not affected. 0 = Has no effect

### 3.4.1.26 PDPWRDWNCLR Register (Offset = C4h) [Reset = 00000000h]

PDPWRDWNCLR is shown in [Table 3-32](#).

Return to the [Summary Table](#).

Clear-only register to deassert the debug frame's powerdown bit

**Table 3-32. PDPWRDWNCLR Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-1	RESERVED	R	0h	Reserved
0	PD_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the debug frame needs to be powered down. 0 = The clock to the debug frame needs to be powered up. Writable only in privileged mode 1 = Bit 0 when written 1, will get cleared in both PDPWRDWNSET and PDPWRDWNCLR registers. The other bits are not affected. 0 = Has no effect

### 3.4.1.27 MSTIDWRENA Register (Offset = 200h) [Reset = 00000000h]

MSTIDWRENA is shown in [Table 3-33](#).

Return to the [Summary Table](#).

MasterID Protection Write Enable Register

**Table 3-33. MSTIDWRENA Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-4	RESERVED	R	0h	Reserved
3-0	MSTIDREG_WRENA	R/W	0h	Readable in both user and privileged modes. 1010 = All master-id registers are unlocked and available for write. others = Writes to all master-id registers are locked. Writable only in privileged mode 1010 = Writes to master-id registers are unlocked. others = Writes to master-id registers are locked.

### 3.4.1.28 MSTIDENA Register (Offset = 204h) [Reset = 00000000h]

MSTIDENA is shown in [Table 3-34](#).

Return to the [Summary Table](#).

MasterID Protection Enable Register

**Table 3-34. MSTIDENA Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-4	RESERVED	R	0h	Reserved
3-0	MSTID_CHK_EN	R/W	0h	Readable in both user and privileged modes. Writable only in privileged mode 1010 = Enable the master-id feature check. others = Master-id check is disabled.

### 3.4.1.29 MSTIDDIAGCTRL Register (Offset = 208h) [Reset = 00000000h]

MSTIDDIAGCTRL is shown in [Table 3-35](#).

Return to the [Summary Table](#).

MasterID Diagnostic Control Register

**Table 3-35. MSTIDDIAGCTRL Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-12	RESERVED	R	0h	Reserved
11-8	DIAG_CMP_VALUE	R/W	0h	MasterID diagnostic mode control register bits; 4-bit data which is compared with the master-id register of all defined frames during diagnostic mode. Any error in compare logic is indicated through AERROR output from PCR. Readable in both user and privileged modes. Reads the programmed value in diagnostic compare value field. Writable only in privileged mode
7-4	RESERVED	R	0h	Reserved
3-0	DIAG_MODE_EN	R/W	0h	MasterID compare logic diagnostic mode enable bits; 4-bit key for enabling the master-id registers compare logic. Readable in both user and privileged modes. Writable only in privileged mode 1010 = Master-id compare diagnostic mode is enabled. others = Master-id compare diagnostic mode is disabled.

### 3.4.1.30 PS0MSTID\_L Register (Offset = 300h) [Reset = 00000000h]

PS0MSTID\_L is shown in [Table 3-36](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register0\_L

**Table 3-36. PS0MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS0_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS0_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.31 PS0MSTID\_H Register (Offset = 304h) [Reset = 00000000h]

PS0MSTID\_H is shown in [Table 3-37](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register0\_H

**Table 3-37. PS0MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS0_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS0_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.32 PS1MSTID\_L Register (Offset = 308h) [Reset = 00000000h]

PS1MSTID\_L is shown in [Table 3-38](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register1\_L

**Table 3-38. PS1MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS1_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS1_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.33 PS1MSTID\_H Register (Offset = 30Ch) [Reset = 00000000h]

PS1MSTID\_H is shown in [Table 3-39](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register1\_H

**Table 3-39. PS1MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS1_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS1_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.34 PS2MSTID\_L Register (Offset = 310h) [Reset = 00000000h]

PS2MSTID\_L is shown in [Table 3-40](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register2\_L

**Table 3-40. PS2MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS2_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS2_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.35 PS2MSTID\_H Register (Offset = 314h) [Reset = 00000000h]

PS2MSTID\_H is shown in [Table 3-41](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register2\_H

**Table 3-41. PS2MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS2_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS2_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.36 PS3MSTID\_L Register (Offset = 318h) [Reset = 00000000h]

PS3MSTID\_L is shown in [Table 3-42](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register3\_L

**Table 3-42. PS3MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS3_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS3_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

15-0	PS14_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.59 PS14MSTID\_H Register (Offset = 374h) [Reset = 00000000h]

PS14MSTID\_H is shown in [Table 3-65](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register14\_H

**Table 3-65. PS14MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS14_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS14_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.60 PS15MSTID\_L Register (Offset = 378h) [Reset = 00000000h]

PS15MSTID\_L is shown in [Table 3-66](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register15\_L

**Table 3-66. PS15MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS15_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS15_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

Peripheral Frame Master-ID Protection Register20\_L

**Table 3-76. PS20MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS20_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS20_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.71 PS20MSTID\_H Register (Offset = 3A4h) [Reset = 00000000h]

PS20MSTID\_H is shown in [Table 3-77](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register20\_H

**Table 3-77. PS20MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS20_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS20_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.72 PS21MSTID\_L Register (Offset = 3A8h) [Reset = 00000000h]

PS21MSTID\_L is shown in [Table 3-78](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register21\_L

**Table 3-78. PS21MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS21_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS21_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.73 PS21MSTID\_H Register (Offset = 3ACh) [Reset = 00000000h]

PS21MSTID\_H is shown in [Table 3-79](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register21\_H

**Table 3-79. PS21MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS21_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS21_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.74 PS22MSTID\_L Register (Offset = 3B0h) [Reset = 00000000h]

PS22MSTID\_L is shown in [Table 3-80](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register22\_L

**Table 3-80. PS22MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS22_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS22_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.75 PS22MSTID\_H Register (Offset = 3B4h) [Reset = 00000000h]

PS22MSTID\_H is shown in [Table 3-81](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register22\_H

**Table 3-81. PS22MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS22_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS22_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.76 PS23MSTID\_L Register (Offset = 3B8h) [Reset = 00000000h]

PS23MSTID\_L is shown in [Table 3-82](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register23\_L

**Table 3-82. PS23MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS23_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS23_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

Peripheral Frame Master-ID Protection Register25\_H

**Table 3-87. PS25MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS25_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS25_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.82 PS26MSTID\_L Register (Offset = 3D0h) [Reset = 00000000h]

PS26MSTID\_L is shown in [Table 3-88](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register26\_L

**Table 3-88. PS26MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS26_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS26_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.83 PS26MSTID\_H Register (Offset = 3D4h) [Reset = 00000000h]

PS26MSTID\_H is shown in [Table 3-89](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register26\_H

**Table 3-89. PS26MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS26_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS26_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.84 PS27MSTID\_L Register (Offset = 3D8h) [Reset = 00000000h]

PS27MSTID\_L is shown in [Table 3-90](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register27\_L

**Table 3-90. PS27MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS27_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS27_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.85 PS27MSTID\_H Register (Offset = 3DCh) [Reset = 00000000h]

15-0	PS31_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.93 PS31MSTID\_H Register (Offset = 3FCh) [Reset = 00000000h]

PS31MSTID\_H is shown in [Table 3-99](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register31\_H

**Table 3-99. PS31MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS31_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS31_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.94 PPS0MSTID\_L Register (Offset = 400h) [Reset = 00000000h]

PPS0MSTID\_L is shown in [Table 3-100](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register0\_L

**Table 3-100. PPS0MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS0_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS0_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.95 PPS0MSTID\_H Register (Offset = 404h) [Reset = 00000000h]

PPS0MSTID\_H is shown in [Table 3-101](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register0\_H

**Table 3-101. PPS0MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS0_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS0_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.96 PPS1MSTID\_L Register (Offset = 408h) [Reset = 00000000h]

PPS1MSTID\_L is shown in [Table 3-102](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register1\_L

**Table 3-102. PPS1MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS1_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS1_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.97 PPS1MSTID\_H Register (Offset = 40Ch) [Reset = 00000000h]

PPS1MSTID\_H is shown in [Table 3-103](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register1\_H

**Table 3-115. PPS7MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS7_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS7_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.110 PPSE0MSTID\_L Register (Offset = 440h) [Reset = 00000000h]

PPSE0MSTID\_L is shown in [Table 3-116](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register0\_L

**Table 3-116. PPSE0MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE0_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE0_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.111 PPSE0MSTID\_H Register (Offset = 444h) [Reset = 00000000h]

PPSE0MSTID\_H is shown in [Table 3-117](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register0\_H

**Table 3-117. PPSE0MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE0_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE0_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.112 PPSE1MSTID\_L Register (Offset = 448h) [Reset = 00000000h]

PPSE1MSTID\_L is shown in [Table 3-118](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register1\_L

**Table 3-118. PPSE1MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE1_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE1_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.113 PPSE1MSTID\_H Register (Offset = 44Ch) [Reset = 00000000h]

**Table 3-132. PPSE8MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE8_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE8_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.127 PPSE8MSTID\_H Register (Offset = 484h) [Reset = 00000000h]

PPSE8MSTID\_H is shown in [Table 3-133](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register8\_H

**Table 3-133. PPSE8MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE8_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE8_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.128 PPSE9MSTID\_L Register (Offset = 488h) [Reset = 00000000h]

PPSE9MSTID\_L is shown in [Table 3-134](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register9\_L

**Table 3-134. PPSE9MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE9_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE9_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.129 PPSE9MSTID\_H Register (Offset = 48Ch) [Reset = 00000000h]

PPSE9MSTID\_H is shown in [Table 3-135](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register9\_H

**Table 3-135. PPSE9MSTID\_H Register Field Descriptions**

Privileged Peripheral Extended Frame Master-ID Protection Register16\_H

**Table 3-149. PPSE16MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE16_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE16_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.144 PPSE17MSTID\_L Register (Offset = 4C8h) [Reset = 00000000h]

PPSE17MSTID\_L is shown in [Table 3-150](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register17\_L

**Table 3-150. PPSE17MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE17_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE17_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.145 PPSE17MSTID\_H Register (Offset = 4CCh) [Reset = 00000000h]

PPSE17MSTID\_H is shown in [Table 3-151](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register17\_H

**Table 3-151. PPSE17MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE17_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE17_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.146 PPSE18MSTID\_L Register (Offset = 4D0h) [Reset = 00000000h]

PPSE18MSTID\_L is shown in [Table 3-152](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register18\_L

**Table 3-152. PPSE18MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE18_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE18_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.147 PPSE18MSTID\_H Register (Offset = 4D4h) [Reset = 00000000h]

PPSE18MSTID\_H is shown in [Table 3-153](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register18\_H

**Table 3-153. PPSE18MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE18_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE18_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.148 PPSE19MSTID\_L Register (Offset = 4D8h) [Reset = 00000000h]

PPSE19MSTID\_L is shown in [Table 3-154](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register19\_L

**Table 3-154. PPSE19MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE19_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE19_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.149 PPSE19MSTID\_H Register (Offset = 4DCh) [Reset = 00000000h]

PPSE19MSTID\_H is shown in [Table 3-155](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register19\_H

**Table 3-155. PPSE19MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE19_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE19_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.150 PPSE20MSTID\_L Register (Offset = 4E0h) [Reset = 00000000h]

PPSE20MSTID\_L is shown in [Table 3-156](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register20\_L

**Table 3-156. PPSE20MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE20_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE20_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.151 PPSE20MSTID\_H Register (Offset = 4E4h) [Reset = 00000000h]

PPSE20MSTID\_H is shown in [Table 3-157](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register20\_H

**Table 3-157. PPSE20MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE20_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE20_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.152 PPSE21MSTID\_L Register (Offset = 4E8h) [Reset = 00000000h]

PPSE21MSTID\_L is shown in [Table 3-158](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register21\_L

**Table 3-158. PPSE21MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE21_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE21_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.160 PPSE25MSTID\_L Register (Offset = 508h) [Reset = 00000000h]

PPSE25MSTID\_L is shown in [Table 3-166](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register25\_L

**Table 3-166. PPSE25MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE25_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE25_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.161 PPSE25MSTID\_H Register (Offset = 50Ch) [Reset = 00000000h]

PPSE25MSTID\_H is shown in [Table 3-167](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register25\_H

**Table 3-167. PPSE25MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE25_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE25_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.162 PPSE26MSTID\_L Register (Offset = 510h) [Reset = 00000000h]

PPSE26MSTID\_L is shown in [Table 3-168](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register26\_L

**Table 3-168. PPSE26MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE26_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE26_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.163 PPSE26MSTID\_H Register (Offset = 514h) [Reset = 00000000h]

PPSE26MSTID\_H is shown in [Table 3-169](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register26\_H

**Table 3-169. PPSE26MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE26_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE26_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.164 PPSE27MSTID\_L Register (Offset = 518h) [Reset = 00000000h]

PPSE27MSTID\_L is shown in [Table 3-170](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register27\_L

**Table 3-170. PPSE27MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE27_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE27_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.165 PPSE27MSTID\_H Register (Offset = 51Ch) [Reset = 00000000h]

PPSE27MSTID\_H is shown in [Table 3-171](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register27\_H

**Table 3-171. PPSE27MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE27_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE27_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.166 PPSE28MSTID\_L Register (Offset = 520h) [Reset = 00000000h]

PPSE28MSTID\_L is shown in [Table 3-172](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register28\_L

**Table 3-172. PPSE28MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE28_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE28_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.167 PPSE28MSTID\_H Register (Offset = 524h) [Reset = 00000000h]

PPSE28MSTID\_H is shown in [Table 3-173](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register28\_H

**Table 3-173. PPSE28MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE28_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE28_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.168 PPSE29MSTID\_L Register (Offset = 528h) [Reset = 00000000h]

PPSE29MSTID\_L is shown in [Table 3-174](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register29\_L

**Table 3-174. PPSE29MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE29_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE29_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.169 PPSE29MSTID\_H Register (Offset = 52Ch) [Reset = 00000000h]

PPSE29MSTID\_H is shown in [Table 3-175](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register29\_H

**Table 3-175. PPSE29MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE29_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE29_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.170 PPSE30MSTID\_L Register (Offset = 530h) [Reset = 00000000h]

PPSE30MSTID\_L is shown in [Table 3-176](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register30\_L

**Table 3-176. PPSE30MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE30_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE30_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.171 PPSE30MSTID\_H Register (Offset = 534h) [Reset = 00000000h]

PPSE30MSTID\_H is shown in [Table 3-177](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register30\_H

**Table 3-177. PPSE30MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE30_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE30_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.172 PPSE31MSTID\_L Register (Offset = 538h) [Reset = 00000000h]

PPSE31MSTID\_L is shown in [Table 3-178](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register31\_L

**Table 3-178. PPSE31MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE31_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE31_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.173 PPSE31MSTID\_H Register (Offset = 53Ch) [Reset = 00000000h]

PPSE31MSTID\_H is shown in [Table 3-179](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register31\_H

**Table 3-179. PPSE31MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE31_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE31_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.174 PCS0MSTID Register (Offset = 540h) [Reset = 00000000h]

PCS0MSTID is shown in [Table 3-180](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register0

**Table 3-180. PCS0MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PCS1MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0
15-0	PCS0MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

### 3.4.1.175 PCS1MSTID Register (Offset = 544h) [Reset = 00000000h]

PCS1MSTID is shown in [Table 3-181](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register1

**Table 3-181. PCS1MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PCS3MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0
15-0	PCS2MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

### 3.4.1.176 PCS2MSTID Register (Offset = 548h) [Reset = 00000000h]

PCS2MSTID is shown in [Table 3-182](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register2

**Table 3-182. PCS2MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PCS5MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0
15-0	PCS4MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

### 3.4.1.177 PCS3MSTID Register (Offset = 54Ch) [Reset = 00000000h]

PCS3MSTID is shown in [Table 3-183](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register3

**Table 3-183. PCS3MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PCS7MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

### 3.4.1.187 PCS13MSTID Register (Offset = 574h) [Reset = 00000000h]

PCS13MSTID is shown in [Table 3-193](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register13

**Table 3-193. PCS13MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PCS27MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0
15-0	PCS26MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

### 3.4.1.188 PCS14MSTID Register (Offset = 578h) [Reset = 00000000h]

PCS14MSTID is shown in [Table 3-194](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register14

**Table 3-194. PCS14MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PCS29MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. **Table 3-204. PCS24MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PCS49MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0
15-0	PCS48MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

### 3.4.1.199 PCS25MSTID Register (Offset = 5A4h) [Reset = 00000000h]

PCS25MSTID is shown in [Table 3-205](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register25

**Table 3-205. PCS25MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PCS51MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0
15-0	PCS50MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

### 3.4.1.200 PCS26MSTID Register (Offset = 5A8h) [Reset = 00000000h]

PCS26MSTID is shown in [Table 3-206](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register26

**Table 3-206. PCS26MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PCS53MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. Bit	Field	Type	Reset	Description
31-16	PPCS11MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS10MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.212 PPCS6MSTID Register (Offset = 5D8h) [Reset = 00000000h]

PPCS6MSTID is shown in [Table 3-218](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register38

**Table 3-218. PPCS6MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPCS13MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS12MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.213 PPCS7MSTID Register (Offset = 5DCh) [Reset = 00000000h]

PPCS7MSTID is shown in [Table 3-219](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register39

**Table 3-219. PPCS7MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPCS15MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS14MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.1.214 PCREXTMSTID Register (Offset = 5E0h) [Reset = 00000000h]

PCREXTMSTID is shown in [Table 3-220](#).

Return to the [Summary Table](#).

Master-ID Protection Register for external PCR

**Table 3-220. PCREXTMSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-0	PCREXT_MSTID	R/W	0h	These bits sets the permission for maximum of 16 masters to address the external PCR frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2 MSS\_PCR2 Registers

Table 3-221 lists the memory-mapped registers for the MSS\_PCR2 registers. All register offset addresses not listed in Table 3-221 should be considered as reserved locations and the register contents should not be modified.

**Table 3-221. MSS\_PCR2 Registers**

### 3.4.2.1 PMPROTSET0 Register (Offset = 0h) [Reset = 00000000h]

PMPROTSET0 is shown in [Table 3-223](#).

Return to the [Summary Table](#).

Set-only register to protect PCS frames 0 to 31

**Table 3-223. PMPROTSET0 Register Field Descriptions**

Bit	Field	Type	Reset	Description
31	PCS31_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
30	PCS30_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
29	PCS29_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
28	PCS28_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
27	PCS27_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.

Bit	Field	Type	Reset	Description
2	PCS34_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
1	PCS33_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
0	PCS32_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect

### 3.4.2.17 PSPWRDWNSET0 Register (Offset = 80h) [Reset = 00000000h]

PSPWRDWNSET0 is shown in [Table 3-239](#).

Return to the [Summary Table](#).

Set-only register to powerdown the applicable peripherals in the 32 quadrants of PS0 to PS7

**Table 3-239. PSPWRDWNSET0 Register Field Descriptions**

Bit	Field	Type	Reset	Description
31	PS7_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
30	PS7_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
29	PS7_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
28	PS7_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
27	PS6_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
26	PS6_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
25	PS6_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

**Table 3-239. PSPWRDWNSET0 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
24	PS6_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
23	PS5_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
22	PS5_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
21	PS5_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
20	PS5_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
19	PS4_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
18	PS4_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
17	PS4_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

**Table 3-239. PSPWRDWNSET0 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
16	PS4_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
15	PS3_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
14	PS3_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
13	PS3_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
12	PS3_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
11	PS2_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
10	PS2_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable bit only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
9	PS2_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

**Table 3-239. PSPWRDWNSET0 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
8	PS2_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
7	PS1_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
6	PS1_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
5	PS1_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
4	PS1_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
3	PS0_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
2	PS0_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
1	PS0_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

**Table 3-239. PSPWRDWNSET0 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
0	PS0_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

### 3.4.2.18 PSPWRDWNSET1 Register (Offset = 84h) [Reset = 00000000h]

PSPWRDWNSET1 is shown in [Table 3-240](#).

Return to the [Summary Table](#).

Set-only register to powerdown the applicable peripherals in the 32 quadrants of PS8 to PS15

**Table 3-240. PSPWRDWNSET1 Register Field Descriptions**

Bit	Field	Type	Reset	Description
31	PS15_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
30	PS15_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
29	PS15_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
28	PS15_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
27	PS14_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
26	PS14_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
25	PS14_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect

4	PS9_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
3	PS8_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
2	PS8_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
1	PS8_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect

**Table 3-240. PSPWRDWNSET1 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
0	PS8_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect

### 3.4.2.19 PSPWRDWNSET2 Register (Offset = 88h) [Reset = 00000000h]

PSPWRDWNSET2 is shown in [Table 3-241](#).

Return to the [Summary Table](#).

Set-only register to powerdown the applicable peripherals in the 32 quadrants of PS16 to PS23

**Table 3-241. PSPWRDWNSET2 Register Field Descriptions**

Bit	Field	Type	Reset	Description
31	PS23_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
30	PS23_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
29	PS23_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
28	PS23_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
27	PS22_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
26	PS22_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
25	PS22_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

**Table 3-241. PSPWRDWNSET2 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
24	PS22_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
23	PS21_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
22	PS21_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
21	PS21_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
20	PS21_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
7	PS25_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
6	PS25_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
5	PS25_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
4	PS25_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
3	PS24_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
2	PS24_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
1	PS24_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

**Table 3-242. PSPWRDWNSET3 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
0	PS24_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

### 3.4.2.21 PSPWRDWNCLR0 Register (Offset = A0h) [Reset = 00000000h]

PSPWRDWNCLR0 is shown in [Table 3-243](#).

Return to the [Summary Table](#).

Clear-only register to deassert powerdown bits of the applicable peripherals in the 32 quadrants of PS0 to PS7

**Table 3-243. PSPWRDWNCLR0 Register Field Descriptions**

Bit	Field	Type	Reset	Description
31	PS7_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
30	PS7_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
29	PS7_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
28	PS7_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
27	PS6_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
26	PS6_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
25	PS6_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

**Table 3-243. PSPWRDWNCLR0 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
24	PS6_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
23	PS5_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
22	PS5_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
21	PS5_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
20	PS5_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
19	PS4_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
18	PS4_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
17	PS4_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

**Table 3-243. PSPWRDWNCLR0 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
16	PS4_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
15	PS3_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
14	PS3_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
12	PS27_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
11	PS26_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
10	PS26_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
9	PS26_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
8	PS26_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

**Table 3-246. PSPWRDWNCLR3 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
7	PS25_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
6	PS25_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
5	PS25_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
4	PS25_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
3	PS24_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
2	PS24_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
1	PS24_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
0	PS24_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

### 3.4.2.25 PDPWRDWNSET Register (Offset = C0h) [Reset = 00000000h]

PDPWRDWNSET is shown in [Table 3-247](#).

Return to the [Summary Table](#).

Set-only register to powerdown the debug frame

**Table 3-247. PDPWRDWNSET Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-1	RESERVED	R	0h	Reserved
0	PD_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = Clock to the debug frame needs to be powered down. 0 = Clock to the debug frame needs to be powered up. Writable only in privileged mode 1 = Bit 0 when written 1, will get set in both PDPWRDWNSET and PDPWRDWNCLR registers. The other bits are not affected. 0 = Has no effect

### 3.4.2.26 PDPWRDWNCLR Register (Offset = C4h) [Reset = 00000000h]

PDPWRDWNCLR is shown in [Table 3-248](#).

Return to the [Summary Table](#).

Clear-only register to deassert the debug frame's powerdown bit

**Table 3-248. PDPWRDWNCLR Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-1	RESERVED	R	0h	Reserved
0	PD_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the debug frame needs to be powered down. 0 = The clock to the debug frame needs to be powered up. Writable only in privileged mode 1 = Bit 0 when written 1, will get cleared in both PDPWRDWNSET and PDPWRDWNCLR registers. The other bits are not affected. 0 = Has no effect

### 3.4.2.27 MSTIDWRENA Register (Offset = 200h) [Reset = 00000000h]

MSTIDWRENA is shown in [Table 3-249](#).

Return to the [Summary Table](#).

MasterID Protection Write Enable Register

**Table 3-249. MSTIDWRENA Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-4	RESERVED	R	0h	Reserved
3-0	MSTIDREG_WRENA	R/W	0h	Readable in both user and privileged modes. 1010 = All master-id registers are unlocked and available for write. others = Writes to all master-id registers are locked. Writable only in privileged mode 1010 = Writes to master-id registers are unlocked. others = Writes to master-id registers are locked.

### 3.4.2.28 MSTIDENA Register (Offset = 204h) [Reset = 00000000h]

MSTIDENA is shown in [Table 3-250](#).

Return to the [Summary Table](#).

MasterID Protection Enable Register

**Table 3-250. MSTIDENA Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-4	RESERVED	R	0h	Reserved
3-0	MSTID_CHK_EN	R/W	0h	Readable in both user and privileged modes. Writable only in privileged mode 1010 = Enable the master-id feature check. others = Master-id check is disabled.

### 3.4.2.29 MSTIDDIAGCTRL Register (Offset = 208h) [Reset = 00000000h]

MSTIDDIAGCTRL is shown in [Table 3-251](#).

Return to the [Summary Table](#).

MasterID Diagnostic Control Register

**Table 3-251. MSTIDDIAGCTRL Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-12	RESERVED	R	0h	Reserved
11-8	DIAG_CMP_VALUE	R/W	0h	MasterID diagnostic mode control register bits; 4-bit data which is compared with the master-id register of all defined frames during diagnostic mode. Any error in compare logic is indicated through AERROR output from PCR. Readable in both user and privileged modes. Reads the programmed value in diagnostic compare value field. Writable only in privileged mode
7-4	RESERVED	R	0h	Reserved
3-0	DIAG_MODE_EN	R/W	0h	MasterID compare logic diagnostic mode enable bits; 4-bit key for enabling the master-id registers compare logic. Readable in both user and privileged modes. Writable only in privileged mode 1010 = Master-id compare diagnostic mode is enabled. others = Master-id compare diagnostic mode is disabled.

### 3.4.2.30 PS0MSTID\_L Register (Offset = 300h) [Reset = 00000000h]

PS0MSTID\_L is shown in [Table 3-252](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register0\_L

**Table 3-252. PS0MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS0_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS0_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.31 PS0MSTID\_H Register (Offset = 304h) [Reset = 00000000h]

PS0MSTID\_H is shown in [Table 3-253](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register0\_H

**Table 3-253. PS0MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS0_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS0_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.32 PS1MSTID\_L Register (Offset = 308h) [Reset = 00000000h]

PS1MSTID\_L is shown in [Table 3-254](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register1\_L

**Table 3-254. PS1MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS1_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS1_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.33 PS1MSTID\_H Register (Offset = 30Ch) [Reset = 00000000h]

PS1MSTID\_H is shown in [Table 3-255](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register1\_H

**Table 3-255. PS1MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS1_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS1_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.34 PS2MSTID\_L Register (Offset = 310h) [Reset = 00000000h]

PS2MSTID\_L is shown in [Table 3-256](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register2\_L

**Table 3-256. PS2MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS2_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS2_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.35 PS2MSTID\_H Register (Offset = 314h) [Reset = 00000000h]

PS2MSTID\_H is shown in [Table 3-257](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register2\_H

**Table 3-257. PS2MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS2_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS2_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.36 PS3MSTID\_L Register (Offset = 318h) [Reset = 00000000h]

PS3MSTID\_L is shown in [Table 3-258](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register3\_L

**Table 3-258. PS3MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS3_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS3_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.37 PS3MSTID\_H Register (Offset = 31Ch) [Reset = 00000000h]

PS3MSTID\_H is shown in [Table 3-259](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register3\_H

**Table 3-259. PS3MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS3_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS3_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.38 PS4MSTID\_L Register (Offset = 320h) [Reset = 00000000h]

15-0	PS14_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.60 PS15MSTID\_L Register (Offset = 378h) [Reset = 00000000h]

PS15MSTID\_L is shown in [Table 3-282](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register15\_L

**Table 3-282. PS15MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS15_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS15_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.61 PS15MSTID\_H Register (Offset = 37Ch) [Reset = 00000000h]

PS15MSTID\_H is shown in [Table 3-283](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register15\_H

**Table 3-283. PS15MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS15_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS15_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.62 PS16MSTID\_L Register (Offset = 380h) [Reset = 00000000h]

PS16MSTID\_L is shown in [Table 3-284](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register16\_L

**Table 3-284. PS16MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS16_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS16_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.63 PS16MSTID\_H Register (Offset = 384h) [Reset = 00000000h]

Bit	Field	Type	Reset	Description
31-16	PS20_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS20_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.71 PS20MSTID\_H Register (Offset = 3A4h) [Reset = 00000000h]

PS20MSTID\_H is shown in [Table 3-293](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register20\_H

**Table 3-293. PS20MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS20_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS20_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.72 PS21MSTID\_L Register (Offset = 3A8h) [Reset = 00000000h]

PS21MSTID\_L is shown in [Table 3-294](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register21\_L

**Table 3-294. PS21MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS21_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS21_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.73 PS21MSTID\_H Register (Offset = 3ACh) [Reset = 00000000h]

PS21MSTID\_H is shown in [Table 3-295](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register21\_H

**Table 3-295. PS21MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS21_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS21_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.74 PS22MSTID\_L Register (Offset = 3B0h) [Reset = 00000000h]

PS22MSTID\_L is shown in [Table 3-296](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register22\_L

**Table 3-296. PS22MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS22_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS22_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.75 PS22MSTID\_H Register (Offset = 3B4h) [Reset = 00000000h]

PS22MSTID\_H is shown in [Table 3-297](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register22\_H

**Table 3-297. PS22MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS22_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS22_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.76 PS23MSTID\_L Register (Offset = 3B8h) [Reset = 00000000h]

PS23MSTID\_L is shown in [Table 3-298](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register23\_L

**Table 3-298. PS23MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS23_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS23_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

31-16	PS26_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS26_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.83 PS26MSTID\_H Register (Offset = 3D4h) [Reset = 00000000h]

PS26MSTID\_H is shown in [Table 3-305](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register26\_H

**Table 3-305. PS26MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS26_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS26_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.84 PS27MSTID\_L Register (Offset = 3D8h) [Reset = 00000000h]

PS27MSTID\_L is shown in [Table 3-306](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register27\_L

**Table 3-306. PS27MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS27_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS27_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.85 PS27MSTID\_H Register (Offset = 3DCh) [Reset = 00000000h]

PS27MSTID\_H is shown in [Table 3-307](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register27\_H

**Table 3-307. PS27MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS27_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS27_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.86 PS28MSTID\_L Register (Offset = 3E0h) [Reset = 00000000h]

**Table 3-315. PS31MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS31_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS31_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.94 PPS0MSTID\_L Register (Offset = 400h) [Reset = 00000000h]

PPS0MSTID\_L is shown in [Table 3-316](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register0\_L

**Table 3-316. PPS0MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS0_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS0_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.95 PPS0MSTID\_H Register (Offset = 404h) [Reset = 00000000h]

PPS0MSTID\_H is shown in [Table 3-317](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register0\_H

**Table 3-317. PPS0MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS0_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS0_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.96 PPS1MSTID\_L Register (Offset = 408h) [Reset = 00000000h]

PPS1MSTID\_L is shown in [Table 3-318](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register1\_L

**Table 3-318. PPS1MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS1_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS1_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.97 PPS1MSTID\_H Register (Offset = 40Ch) [Reset = 00000000h]

PPS1MSTID\_H is shown in [Table 3-319](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register1\_H

**Table 3-319. PPS1MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS1_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS1_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.98 PPS2MSTID\_L Register (Offset = 410h) [Reset = 00000000h]

PPS2MSTID\_L is shown in [Table 3-320](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register2\_L

**Table 3-320. PPS2MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS2_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS2_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.99 PPS2MSTID\_H Register (Offset = 414h) [Reset = 00000000h]

PPS2MSTID\_H is shown in [Table 3-321](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register2\_H

**Table 3-321. PPS2MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS2_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS2_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.100 PPS3MSTID\_L Register (Offset = 418h) [Reset = 00000000h]

PPS3MSTID\_L is shown in [Table 3-322](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register3\_L

**Table 3-322. PPS3MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS3_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS3_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.101 PPS3MSTID\_H Register (Offset = 41Ch) [Reset = 00000000h]

PPS3MSTID\_H is shown in [Table 3-323](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register3\_H

**Table 3-332. PPSE0MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE0_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE0_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.111 PPSE0MSTID\_H Register (Offset = 444h) [Reset = 00000000h]

PPSE0MSTID\_H is shown in [Table 3-333](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register0\_H

**Table 3-333. PPSE0MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE0_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE0_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.112 PPSE1MSTID\_L Register (Offset = 448h) [Reset = 00000000h]

PPSE1MSTID\_L is shown in [Table 3-334](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register1\_L

**Table 3-334. PPSE1MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE1_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE1_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.113 PPSE1MSTID\_H Register (Offset = 44Ch) [Reset = 00000000h]

PPSE1MSTID\_H is shown in [Table 3-335](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register1\_H

**Table 3-335. PPSE1MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE1_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE1_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.114 PPSE2MSTID\_L Register (Offset = 450h) [Reset = 00000000h]

PPSE2MSTID\_L is shown in [Table 3-336](#).

**Table 3-349. PPSE8MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE8_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE8_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.128 PPSE9MSTID\_L Register (Offset = 488h) [Reset = 00000000h]

PPSE9MSTID\_L is shown in [Table 3-350](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register9\_L

**Table 3-350. PPSE9MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE9_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE9_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.129 PPSE9MSTID\_H Register (Offset = 48Ch) [Reset = 00000000h]

PPSE9MSTID\_H is shown in [Table 3-351](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register9\_H

**Table 3-351. PPSE9MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE9_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE9_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.130 PPSE10MSTID\_L Register (Offset = 490h) [Reset = 00000000h]

PPSE10MSTID\_L is shown in [Table 3-352](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register10\_L

**Table 3-352. PPSE10MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE10_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE10_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.131 PPSE10MSTID\_H Register (Offset = 494h) [Reset = 00000000h]

PPSE10MSTID\_H is shown in [Table 3-353](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register10\_H

**Table 3-353. PPSE10MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE10_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE10_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.132 PPSE11MSTID\_L Register (Offset = 498h) [Reset = 00000000h]

PPSE11MSTID\_L is shown in [Table 3-354](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register11\_L

**Table 3-354. PPSE11MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE11_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE11_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.133 PPSE11MSTID\_H Register (Offset = 49Ch) [Reset = 00000000h]

PPSE17MSTID\_L is shown in [Table 3-366](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register17\_L

**Table 3-366. PPSE17MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE17_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE17_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.145 PPSE17MSTID\_H Register (Offset = 4CCh) [Reset = 00000000h]

PPSE17MSTID\_H is shown in [Table 3-367](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register17\_H

**Table 3-367. PPSE17MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE17_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE17_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.146 PPSE18MSTID\_L Register (Offset = 4D0h) [Reset = 00000000h]

PPSE18MSTID\_L is shown in [Table 3-368](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register18\_L

**Table 3-368. PPSE18MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE18_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE18_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.147 PPSE18MSTID\_H Register (Offset = 4D4h) [Reset = 00000000h]

PPSE18MSTID\_H is shown in [Table 3-369](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register18\_H

**Table 3-369. PPSE18MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE18_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE18_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.148 PPSE19MSTID\_L Register (Offset = 4D8h) [Reset = 00000000h]

PPSE19MSTID\_L is shown in [Table 3-370](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register19\_L

**Table 3-370. PPSE19MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE19_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE19_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.149 PPSE19MSTID\_H Register (Offset = 4DCh) [Reset = 00000000h]

PPSE19MSTID\_H is shown in [Table 3-371](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register19\_H

**Table 3-371. PPSE19MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE19_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE19_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.150 PPSE20MSTID\_L Register (Offset = 4E0h) [Reset = 00000000h]

PPSE20MSTID\_L is shown in [Table 3-372](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register20\_L

**Table 3-372. PPSE20MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE20_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE20_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.151 PPSE20MSTID\_H Register (Offset = 4E4h) [Reset = 00000000h]

PPSE20MSTID\_H is shown in [Table 3-373](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register20\_H

**Table 3-373. PPSE20MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE20_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE20_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.152 PPSE21MSTID\_L Register (Offset = 4E8h) [Reset = 00000000h]

PPSE21MSTID\_L is shown in [Table 3-374](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register21\_L

**Table 3-374. PPSE21MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE21_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE21_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.153 PPSE21MSTID\_H Register (Offset = 4ECh) [Reset = 00000000h]

PPSE21MSTID\_H is shown in [Table 3-375](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register21\_H

**Table 3-375. PPSE21MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE21_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE21_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.154 PPSE22MSTID\_L Register (Offset = 4F0h) [Reset = 00000000h]

PPSE22MSTID\_L is shown in [Table 3-376](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register22\_L

**Table 3-376. PPSE22MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE22_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE22_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.155 PPSE22MSTID\_H Register (Offset = 4F4h) [Reset = 00000000h]

PPSE22MSTID\_H is shown in [Table 3-377](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register22\_H

**Table 3-377. PPSE22MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE22_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE22_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.156 PPSE23MSTID\_L Register (Offset = 4F8h) [Reset = 00000000h]

PPSE23MSTID\_L is shown in [Table 3-378](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register23\_L

**Table 3-378. PPSE23MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE23_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE23_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.157 PPSE23MSTID\_H Register (Offset = 4FCh) [Reset = 00000000h]

PPSE23MSTID\_H is shown in [Table 3-379](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register23\_H

**Table 3-379. PPSE23MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description

Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.161 PPSE25MSTID\_H Register (Offset = 50Ch) [Reset = 00000000h]

PPSE25MSTID\_H is shown in [Table 3-383](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register25\_H

**Table 3-383. PPSE25MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE25_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE25_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.162 PPSE26MSTID\_L Register (Offset = 510h) [Reset = 00000000h]

PPSE26MSTID\_L is shown in [Table 3-384](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register26\_L

**Table 3-384. PPSE26MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE26_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE26_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.163 PPSE26MSTID\_H Register (Offset = 514h) [Reset = 00000000h]

PPSE26MSTID\_H is shown in [Table 3-385](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register26\_H

**Table 3-385. PPSE26MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE26_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE26_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.164 PPSE27MSTID\_L Register (Offset = 518h) [Reset = 00000000h]

PPSE27MSTID\_L is shown in [Table 3-386](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register27\_L

**Table 3-386. PPSE27MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE27_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE27_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.165 PPSE27MSTID\_H Register (Offset = 51Ch) [Reset = 00000000h]

PPSE27MSTID\_H is shown in [Table 3-387](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register27\_H

**Table 3-387. PPSE27MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE27_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE27_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.166 PPSE28MSTID\_L Register (Offset = 520h) [Reset = 00000000h]

PPSE28MSTID\_L is shown in [Table 3-388](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register28\_L

**Table 3-388. PPSE28MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE28_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE28_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.167 PPSE28MSTID\_H Register (Offset = 524h) [Reset = 00000000h]

PPSE28MSTID\_H is shown in [Table 3-389](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register28\_H

**Table 3-389. PPSE28MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE28_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE28_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.168 PPSE29MSTID\_L Register (Offset = 528h) [Reset = 00000000h]

PPSE29MSTID\_L is shown in [Table 3-390](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register29\_L

**Table 3-390. PPSE29MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE29_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE29_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.169 PPSE29MSTID\_H Register (Offset = 52Ch) [Reset = 00000000h]

PPSE29MSTID\_H is shown in [Table 3-391](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register29\_H

**Table 3-391. PPSE29MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE29_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE29_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.170 PPSE30MSTID\_L Register (Offset = 530h) [Reset = 00000000h]

PPSE30MSTID\_L is shown in [Table 3-392](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register30\_L

**Table 3-392. PPSE30MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE30_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE30_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.171 PPSE30MSTID\_H Register (Offset = 534h) [Reset = 00000000h]

PPSE30MSTID\_H is shown in [Table 3-393](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register30\_H

**Table 3-393. PPSE30MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE30_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE30_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.172 PPSE31MSTID\_L Register (Offset = 538h) [Reset = 00000000h]

PPSE31MSTID\_L is shown in [Table 3-394](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register31\_L

**Table 3-394. PPSE31MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE31_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE31_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.173 PPSE31MSTID\_H Register (Offset = 53Ch) [Reset = 00000000h]

PPSE31MSTID\_H is shown in [Table 3-395](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register31\_H

**Table 3-395. PPSE31MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE31_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE31_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.174 PCS0MSTID Register (Offset = 540h) [Reset = 00000000h]

PCS0MSTID is shown in [Table 3-396](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register0

**Table 3-396. PCS0MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PCS1MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0
15-0	PCS0MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

### 3.4.2.175 PCS1MSTID Register (Offset = 544h) [Reset = 00000000h]

PCS1MSTID is shown in [Table 3-397](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register1

**Table 3-397. PCS1MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PCS3MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0
15-0	PCS2MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

### 3.4.2.176 PCS2MSTID Register (Offset = 548h) [Reset = 00000000h]

PCS2MSTID is shown in [Table 3-398](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register2

**Table 3-398. PCS2MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PCS5MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0
15-0	PCS4MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

### 3.4.2.177 PCS3MSTID Register (Offset = 54Ch) [Reset = 00000000h]

PCS3MSTID is shown in [Table 3-399](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register3

**Table 3-399. PCS3MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PCS7MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

### 3.4.2.199 PCS25MSTID Register (Offset = 5A4h) [Reset = 00000000h]

PCS25MSTID is shown in [Table 3-421](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register25

**Table 3-421. PCS25MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PCS51MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0
15-0	PCS50MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

### 3.4.2.200 PCS26MSTID Register (Offset = 5A8h) [Reset = 00000000h]

PCS26MSTID is shown in [Table 3-422](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register26

**Table 3-422. PCS26MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PCS53MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. **Table 3-434. PPCS6MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPCS13MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS12MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.213 PPCS7MSTID Register (Offset = 5DCh) [Reset = 00000000h]

PPCS7MSTID is shown in [Table 3-435](#).

Return to the [Summary Table](#).

Memory Frame Master ID Protection Register39

**Table 3-435. PPCS7MSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPCS15MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS14MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.2.214 PCREXTMSTID Register (Offset = 5E0h) [Reset = 00000000h]

PCREXTMSTID is shown in [Table 3-436](#).

Return to the [Summary Table](#).

Master-ID Protection Register for external PCR

**Table 3-436. PCREXTMSTID Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-0	PCREXT_MSTID	R/W	0h	These bits sets the permission for maximum of 16 masters to address the external PCR frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3 DSS\_PCR Registers

Table 3-437 lists the memory-mapped registers for the DSS\_PCR registers. All register offset addresses not listed in Table 3-437 should be considered as reserved locations and the register contents should not be modified.

**Table 3-437. DSS\_PCR Registers**

### 3.4.3.1 PMPROTSET0 Register (Offset = 0h) [Reset = 00000000h]

PMPROTSET0 is shown in [Table 3-439](#).

Return to the [Summary Table](#).

Set-only register to protect PCS frames 0 to 31

**Table 3-439. PMPROTSET0 Register Field Descriptions**

Bit	Field	Type	Reset	Description
31	PCS31_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
30	PCS30_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
29	PCS29_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
28	PCS28_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
27	PCS27_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.

**Table 3-439. PMPROTSET0 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
26	PCS26_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
25	PCS25_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. ### 3.4.3.18 PSPWRDWNSET1 Register (Offset = 84h) [Reset = 00000000h]

PSPWRDWNSET1 is shown in [Table 3-456](#).

Return to the [Summary Table](#).

Set-only register to powerdown the applicable peripherals in the 32 quadrants of PS8 to PS15

**Table 3-456. PSPWRDWNSET1 Register Field Descriptions**

**Table 3-456. PSPWRDWNSET1 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
0	PS8_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect

### 3.4.3.19 PSPWRDWNSET2 Register (Offset = 88h) [Reset = 00000000h]

PSPWRDWNSET2 is shown in [Table 3-457](#).

Return to the [Summary Table](#).

Set-only register to powerdown the applicable peripherals in the 32 quadrants of PS16 to PS23

**Table 3-457. PSPWRDWNSET2 Register Field Descriptions**

Bit	Field	Type	Reset	Description
31	PS23_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
30	PS23_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
29	PS23_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
28	PS23_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
27	PS22_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
26	PS22_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
25	PS22_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

**Table 3-457. PSPWRDWNSET2 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
24	PS22_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
23	PS21_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
22	PS21_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
21	PS21_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
20	PS21_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
19	PS20_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
18	PS20_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
17	PS20_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

**Table 3-457. PSPWRDWNSET2 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
16	PS20_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
15	PS19_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
14	PS19_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
13	PS19_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
12	PS19_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
11	PS18_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
10	PS18_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
9	PS18_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

**Table 3-457. PSPWRDWNSET2 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
8	PS18_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
7	PS17_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
6	PS17_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
5	PS17_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
4	PS17_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
3	PS16_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
2	PS16_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
1	PS16_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

**Table 3-457. PSPWRDWNSET2 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
0	PS16_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

### 3.4.3.20 PSPWRDWNSET3 Register (Offset = 8Ch) [Reset = 00000000h]

PSPWRDWNSET3 is shown in [Table 3-458](#).

Return to the [Summary Table](#).

Set-only register to powerdown the applicable peripherals in the 32 quadrants of PS24 to PS31

**Table 3-458. PSPWRDWNSET3 Register Field Descriptions**

Bit	Field	Type	Reset	Description
31	PS31_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
30	PS31_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
29	PS31_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
3	PS24_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
2	PS24_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
1	PS24_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

**Table 3-458. PSPWRDWNSET3 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
0	PS24_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

### 3.4.3.21 PSPWRDWNCLR0 Register (Offset = A0h) [Reset = 00000000h]

PSPWRDWNCLR0 is shown in [Table 3-459](#).

Return to the [Summary Table](#).

Clear-only register to deassert powerdown bits of the applicable peripherals in the 32 quadrants of PS0 to PS7

**Table 3-459. PSPWRDWNCLR0 Register Field Descriptions**

Bit	Field	Type	Reset	Description
31	PS7_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
30	PS7_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
29	PS7_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
28	PS7_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
27	PS6_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
26	PS6_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
25	PS6_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

**Table 3-459. PSPWRDWNCLR0 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
24	PS6_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
23	PS5_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
22	PS5_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
21	PS5_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
20	PS5_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
19	PS4_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
18	PS4_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
17	PS4_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

**Table 3-459. PSPWRDWNCLR0 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
16	PS4_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
15	PS3_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNCLR1 and PSPWRDWNCLR1 registers 0 = Has no effect
6	PS9_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNCLR1 and PSPWRDWNCLR1 registers 0 = Has no effect
5	PS9_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNCLR1 and PSPWRDWNCLR1 registers 0 = Has no effect
4	PS9_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNCLR1 and PSPWRDWNCLR1 registers 0 = Has no effect
3	PS8_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNCLR1 and PSPWRDWNCLR1 registers 0 = Has no effect
2	PS8_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNCLR1 and PSPWRDWNCLR1 registers 0 = Has no effect
1	PS8_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNCLR1 and PSPWRDWNCLR1 registers 0 = Has no effect

**Table 3-460. PSPWRDWNCLR1 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
0	PS8_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNCLR1 and PSPWRDWNCLR1 registers 0 = Has no effect

### 3.4.3.23 PSPWRDWNCLR2 Register (Offset = A8h) [Reset = 00000000h]

PSPWRDWNCLR2 is shown in [Table 3-461](#).

Return to the [Summary Table](#).

Clear-only register to deassert powerdown bits of the applicable peripherals in the 32 quadrants of PS16 to PS23

**Table 3-461. PSPWRDWNCLR2 Register Field Descriptions**

Bit	Field	Type	Reset	Description
31	PS23_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
30	PS23_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
29	PS23_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
28	PS23_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
27	PS22_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
26	PS22_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
25	PS22_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

**Table 3-461. PSPWRDWNCLR2 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
24	PS22_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
23	PS21_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
22	PS21_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
21	PS21_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
20	PS21_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
19	PS20_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
18	PS20_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
17	PS20_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

**Table 3-461. PSPWRDWNCLR2 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
16	PS20_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
15	PS19_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
14	PS19_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
13	PS19_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
12	PS19_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
11	PS18_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
10	PS18_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
9	PS18_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

**Table 3-461. PSPWRDWNCLR2 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
8	PS18_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
7	PS17_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
6	PS17_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
5	PS17_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

9	PS26_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
8	PS26_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

**Table 3-462. PSPWRDWNCLR3 Register Field Descriptions (continued)**

Bit	Field	Type	Reset	Description
7	PS25_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
6	PS25_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
5	PS25_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
4	PS25_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
3	PS24_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
2	PS24_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
1	PS24_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
0	PS24_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

### 3.4.3.25 PDPWRDWNSET Register (Offset = C0h) [Reset = 00000000h]

PDPWRDWNSET is shown in [Table 3-463](#).

Return to the [Summary Table](#).

Set-only register to powerdown the debug frame

**Table 3-463. PDPWRDWNSET Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-1	RESERVED	R	0h	Reserved
0	PD_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = Clock to the debug frame needs to be powered down. 0 = Clock to the debug frame needs to be powered up. Writable only in privileged mode 1 = Bit 0 when written 1, will get set in both PDPWRDWNSET and PDPWRDWNCLR registers. The other bits are not affected. 0 = Has no effect

### 3.4.3.26 PDPWRDWNCLR Register (Offset = C4h) [Reset = 00000000h]

PDPWRDWNCLR is shown in [Table 3-464](#).

Return to the [Summary Table](#).

Clear-only register to deassert the debug frame's powerdown bit

**Table 3-464. PDPWRDWNCLR Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-1	RESERVED	R	0h	Reserved
0	PD_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the debug frame needs to be powered down. 0 = The clock to the debug frame needs to be powered up. Writable only in privileged mode 1 = Bit 0 when written 1, will get cleared in both PDPWRDWNSET and PDPWRDWNCLR registers. The other bits are not affected. 0 = Has no effect

### 3.4.3.27 MSTIDWRENA Register (Offset = 200h) [Reset = 00000000h]

MSTIDWRENA is shown in [Table 3-465](#).

Return to the [Summary Table](#).

MasterID Protection Write Enable Register

**Table 3-465. MSTIDWRENA Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-4	RESERVED	R	0h	Reserved
3-0	MSTIDREG_WRENA	R/W	0h	Readable in both user and privileged modes. 1010 = All master-id registers are unlocked and available for write. others = Writes to all master-id registers are locked. Writable only in privileged mode 1010 = Writes to master-id registers are unlocked. others = Writes to master-id registers are locked.

### 3.4.3.28 MSTIDENA Register (Offset = 204h) [Reset = 00000000h]

MSTIDENA is shown in [Table 3-466](#).

Return to the [Summary Table](#).

MasterID Protection Enable Register

**Table 3-466. MSTIDENA Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-4	RESERVED	R	0h	Reserved
3-0	MSTID_CHK_EN	R/W	0h	Readable in both user and privileged modes. Writable only in privileged mode 1010 = Enable the master-id feature check. others = Master-id check is disabled.

### 3.4.3.29 MSTIDDIAGCTRL Register (Offset = 208h) [Reset = 00000000h]

MSTIDDIAGCTRL is shown in [Table 3-467](#).

Return to the [Summary Table](#).

MasterID Diagnostic Control Register

**Table 3-467. MSTIDDIAGCTRL Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-12	RESERVED	R	0h	Reserved
11-8	DIAG_CMP_VALUE	R/W	0h	MasterID diagnostic mode control register bits; 4-bit data which is compared with the master-id register of all defined frames during diagnostic mode. Any error in compare logic is indicated through AERROR output from PCR. Readable in both user and privileged modes. Reads the programmed value in diagnostic compare value field. Writable only in privileged mode
7-4	RESERVED	R	0h	Reserved
3-0	DIAG_MODE_EN	R/W	0h	MasterID compare logic diagnostic mode enable bits; 4-bit key for enabling the master-id registers compare logic. Readable in both user and privileged modes. Writable only in privileged mode 1010 = Master-id compare diagnostic mode is enabled. others = Master-id compare diagnostic mode is disabled.

### 3.4.3.30 PS0MSTID\_L Register (Offset = 300h) [Reset = 00000000h]

PS0MSTID\_L is shown in [Table 3-468](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register0\_L

**Table 3-468. PS0MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS0_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS0_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.31 PS0MSTID\_H Register (Offset = 304h) [Reset = 00000000h]

PS0MSTID\_H is shown in [Table 3-469](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register0\_H

**Table 3-469. PS0MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS0_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS0_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.32 PS1MSTID\_L Register (Offset = 308h) [Reset = 00000000h]

PS1MSTID\_L is shown in [Table 3-470](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register1\_L

**Table 3-470. PS1MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS1_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS1_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.33 PS1MSTID\_H Register (Offset = 30Ch) [Reset = 00000000h]

PS1MSTID\_H is shown in [Table 3-471](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register1\_H

**Table 3-471. PS1MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS1_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS1_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.34 PS2MSTID\_L Register (Offset = 310h) [Reset = 00000000h]

PS2MSTID\_L is shown in [Table 3-472](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register2\_L

**Table 3-472. PS2MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS2_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS2_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.35 PS2MSTID\_H Register (Offset = 314h) [Reset = 00000000h]

PS2MSTID\_H is shown in [Table 3-473](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register2\_H

**Table 3-473. PS2MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS2_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS2_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.36 PS3MSTID\_L Register (Offset = 318h) [Reset = 00000000h]

PS3MSTID\_L is shown in [Table 3-474](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register3\_L

**Table 3-474. PS3MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS3_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS3_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.37 PS3MSTID\_H Register (Offset = 31Ch) [Reset = 00000000h]

PS3MSTID\_H is shown in [Table 3-475](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register3\_H

**Table 3-475. PS3MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS3_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS3_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.38 PS4MSTID\_L Register (Offset = 320h) [Reset = 00000000h]

PS4MSTID\_L is shown in [Table 3-476](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register4\_L

**Table 3-476. PS4MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS4_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS4_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.39 PS4MSTID\_H Register (Offset = 324h) [Reset = 00000000h]

PS4MSTID\_H is shown in [Table 3-477](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register4\_H

**Table 3-477. PS4MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS4_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS4_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.40 PS5MSTID\_L Register (Offset = 328h) [Reset = 00000000h]

PS5MSTID\_L is shown in [Table 3-478](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register5\_L

**Table 3-478. PS5MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS5_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS5_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.41 PS5MSTID\_H Register (Offset = 32Ch) [Reset = 00000000h]

PS5MSTID\_H is shown in [Table 3-479](#).

Bit	Field	Type	Reset	Description
31-16	PS20_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS20_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.72 PS21MSTID\_L Register (Offset = 3A8h) [Reset = 00000000h]

PS21MSTID\_L is shown in [Table 3-510](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register21\_L

**Table 3-510. PS21MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS21_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS21_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.73 PS21MSTID\_H Register (Offset = 3ACh) [Reset = 00000000h]

PS21MSTID\_H is shown in [Table 3-511](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register21\_H

**Table 3-511. PS21MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS21_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS21_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.74 PS22MSTID\_L Register (Offset = 3B0h) [Reset = 00000000h]

PS22MSTID\_L is shown in [Table 3-512](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register22\_L

**Table 3-512. PS22MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS22_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS22_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.75 PS22MSTID\_H Register (Offset = 3B4h) [Reset = 00000000h]

Bit	Field	Type	Reset	Description
31-16	PS26_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS26_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.83 PS26MSTID\_H Register (Offset = 3D4h) [Reset = 00000000h]

PS26MSTID\_H is shown in [Table 3-521](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register26\_H

**Table 3-521. PS26MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS26_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS26_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.84 PS27MSTID\_L Register (Offset = 3D8h) [Reset = 00000000h]

PS27MSTID\_L is shown in [Table 3-522](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register27\_L

**Table 3-522. PS27MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS27_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS27_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.85 PS27MSTID\_H Register (Offset = 3DCh) [Reset = 00000000h]

PS27MSTID\_H is shown in [Table 3-523](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register27\_H

**Table 3-523. PS27MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS27_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS27_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.86 PS28MSTID\_L Register (Offset = 3E0h) [Reset = 00000000h]

PS28MSTID\_L is shown in [Table 3-524](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register28\_L

**Table 3-524. PS28MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS28_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS28_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.87 PS28MSTID\_H Register (Offset = 3E4h) [Reset = 00000000h]

PS28MSTID\_H is shown in [Table 3-525](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register28\_H

**Table 3-525. PS28MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS28_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS28_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.88 PS29MSTID\_L Register (Offset = 3E8h) [Reset = 00000000h]

PS29MSTID\_L is shown in [Table 3-526](#).

Return to the [Summary Table](#).

Peripheral Frame Master-ID Protection Register29\_L

**Table 3-526. PS29MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PS29_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS29_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.89 PS29MSTID\_H Register (Offset = 3ECh) [Reset = 00000000h]

15-0	PS31_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peripheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.94 PPS0MSTID\_L Register (Offset = 400h) [Reset = 00000000h]

PPS0MSTID\_L is shown in [Table 3-532](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register0\_L

**Table 3-532. PPS0MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS0_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS0_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.95 PPS0MSTID\_H Register (Offset = 404h) [Reset = 00000000h]

PPS0MSTID\_H is shown in [Table 3-533](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register0\_H

**Table 3-533. PPS0MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS0_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS0_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.96 PPS1MSTID\_L Register (Offset = 408h) [Reset = 00000000h]

PPS1MSTID\_L is shown in [Table 3-534](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register1\_L

**Table 3-534. PPS1MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS1_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS1_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.97 PPS1MSTID\_H Register (Offset = 40Ch) [Reset = 00000000h]

PPS1MSTID\_H is shown in [Table 3-535](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register1\_H

**Table 3-535. PPS1MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS1_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS1_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.98 PPS2MSTID\_L Register (Offset = 410h) [Reset = 00000000h]

PPS2MSTID\_L is shown in [Table 3-536](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register2\_L

**Table 3-536. PPS2MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPS2_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS2_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.99 PPS2MSTID\_H Register (Offset = 414h) [Reset = 00000000h]

PPS2MSTID\_H is shown in [Table 3-537](#).

Return to the [Summary Table](#).

Privileged Peripheral Frame Master-ID Protection Register2\_H

Privileged Peripheral Extended Frame Master-ID Protection Register0\_L

**Table 3-548. PPSE0MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE0_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE0_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.111 PPSE0MSTID\_H Register (Offset = 444h) [Reset = 00000000h]

PPSE0MSTID\_H is shown in [Table 3-549](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register0\_H

**Table 3-549. PPSE0MSTID\_H Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE0_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE0_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

### 3.4.3.112 PPSE1MSTID\_L Register (Offset = 448h) [Reset = 00000000h]

PPSE1MSTID\_L is shown in [Table 3-550](#).

Return to the [Summary Table](#).

Privileged Peripheral Extended Frame Master-ID Protection Register1\_L

**Table 3-550. PPSE1MSTID\_L Register Field Descriptions**

Bit	Field	Type	Reset	Description
31-16	PPSE1_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
