

# 3.6V, 1A Output Smart Meter Supercapacitor Backup Power Supply Reference Design

## Description

This reference design demonstrates a backup power supply design for smart meter applications. The TPS61022 boost converter has an extended operating range of 0.5V which maximizes the energy use of the supercapacitor energy. This results in a longer holdup time or a smaller supercapacitor. The BQ25173 provides constant current charging for the supercapacitor. The TPS2116 provides a seamless transition between the main power from the TPS62932 and the supercapacitor backup source.

## Features

- 3.6V, 1A output from 12V input
- 3.6V holdup time when 12V is removed
- 0.5V minimum boost input maximizes utilization of supercapacitor energy
- Seamless switching between main power and backup power

## 1 Test Prerequisites

### 1.1 Voltage and Current Requirements

**Table 1-1. Voltage and Current Requirements**

PARAMETER	SPECIFICATIONS
Input voltage	9.6VDC to 14.4VDC
Output voltage	3.6VDC $\pm$ 3%
Output current	1A

### 1.2 Required Equipment

- Power supply, 0VDC to 16VDC, 1A
- Active load, 3.6VDC, 2A

### 1.3 Considerations

All testing is performed at +25C° ambient temperature. Some testing required removing the supercapacitor from the PCB.

### 1.4 Dimensions

The board is 55.8mm  $\times$  55.8mm.

### 1.5 Test Setup

Install jumpers J3, J5, J7, and J9 before testing.

## 2 Testing and Results

### 2.1 Efficiency Graphs

Figure 2-1 and Figure 2-2 show the efficiency graphs.
