

TPS6285020M-Q1 PSPICE Transient Model Features and Limitations

```
*****
*
* Model Usage Notes:
*
* A. Features have been modelled
*   1. Frequency foldback during soft-start
*   2. Fold-Back overcurrent protection
*   3. PGOOD functionality
*   4. MODE Pin functionality for FPWM
*   5. Sync functionality
*   6. Different COMP Settings functionality
*   7. Min On Time
*   8. UVLO functionality
*   9. Frequency selection functionality
*
* B. Features have not been modelled
*   1. Operating Quiescent Current
*   2. Shutdown Current
*   3. Temperature dependent characteristics
*   4. Spread Spectrum clocking functionality is not modeled.
*   5. Current through Pins EN,MODE_SYNC,COMP_FSET,FB are not modelled.
*
* C. Application Notes
*   1. The parameter STEADY_STATE has been used to reach the steady state faster.
*      Keep STEADY_STATE = 0 to observe startup behaviour.
*      Keep STEADY_STATE = 1 and appropriate IC on Inductor and capacitor to observe for faster Steady state.
